Date: Saturday, January 18, 2020 11:23:20 AM
Importance: Low

Hi Leah Heuer,

Your Clearview account has **unlimited** searches. Don't stop at one search. Or ten. **Try to reach 100 searches with Clearview.**

Investigators who do 100+ Clearview searches have the best chances of **successfully solving crimes** with Clearview in our experience. It's the best way to thoroughly test the technology. You never know when a search will turn up a match. It only takes 1-5 seconds to find out with Clearview, unlike other facial identification systems.

The more searches, the more matches. It's a numbers game. The investigators who search the most are the investigators who solve the most cases. Our proprietary database is the biggest in the world and gets bigger every day. Every new day means more potential results from Clearview.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Best regards,

—Team Clearview

Subject: [EXTERNAL][POSSIBLE SPAM] Clearview Statement to Customers
Date: Tuesday, February 25, 2020 6:23:56 PM
Importance: Low

Statement to our Customers:
We are writing to let you know that someone has gained unauthorized access to our organization list. They retrieved the following:
* Organization Names
* Number of user accounts
* Number of searches

No passwords or any personally identifiable information of customers were revealed. While some information about test user accounts may have been accessed, no law enforcement search histories, emails, user names, public photos or any biometric data were accessed.

Our servers were not breached, and there was no compromise of Clearview's systems or network.

Most importantly, we have fixed this vulnerability. We are contacting the authorities about this unauthorized access.

If you have any questions, please feel free to contact us at: help@clearview.ai

Thank you,
Team Clearview

Hi. You should have an email soon from Team Clearview with your account activation link. Once you activate your account, I encourage you to test the technology on your desktop (log in thru https://app.clearview.ai/app/login) and the mobile app. Also attached is general info with success stories. ***If you would like to have a webinar to walk thru demos, learn about its utilities and ask question, just let me know. Additionally, please send names and emails for any other officers that would like a demo account and I will set them up right away.***

Please do not hesitate to contact me with any questions. I look forward to working with you.

Stay Safe,

Hi. You should have an email soon from Team Clearview with your account activation link. Once you activate your account, I encourage you to test the technology on your desktop and the mobile app. ***If you would like to have a webinar to walk thru demos, learn about its utilities and ask question, just let me know. Additionally, please send names and emails for any other officers that would like a demo account and I will set them up right away.***

Please do not hesitate to contact me with any questions. I look forward to working with you.

Stay Safe,

-Jess

Good morning. You should have an email from Team Clearview with your account activation link. I encourage you to test the tech on computer/laptop (log in thru https://app.clearview.ai/app/login) and the mobile app. Also attached is general info and sample success stories and a doc with some search tips. If you would find a video demo call helpful just let me know. **Finally – if there are any other officers/agents that would like an account just send me names and emails. The trial period runs 30 days so let's be sure to get as many officers testing the tech that you would like during the trial.**

Please do not hesitate to contact me with any questions. I look forward to working with you.

Stay Safe,
- Jess

Hi Rachael Songalewski,

You should have a setup email in your inbox shortly. It only takes one minute to install and start searching.

Here are three important tips for using Clearview:

1. **Search a lot.** Your Clearview account has **unlimited** searches. Don't stop at one search. See if you can reach 100 searches. It's a numbers game. Our database is always expanding and you never know when a photo will turn up a lead. Take a selfie with Clearview or search a celebrity to see how powerful the technology can be.

2. **Refer your colleagues.** The more people that search, the more successes. We want to make this advanced technology available to as many investigators as possible. If you think your colleagues might want to try Clearview out for themselves, just send their names and e-mail addresses to help@clearview.ai and we'll sign them all up too.

3. **Get Clearview for the long haul.** If you like Clearview at the end of your trial period and it's helping you solve cases, put us in touch with the appropriate person at your organization who can proceed with procurement.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Finally, please note the disclaimer at the bottom.

Best regards,

— Team Clearview

Importance: Low

Hi Boyd Bullard,

You should have a setup email in your inbox shortly. It only takes one minute to install and start searching.

Here are three important tips for using Clearview:

1. **Search a lot.** Your Clearview account has **unlimited** searches. Don't stop at one search. See if you can reach 100 searches. It's a numbers game. Our database is always expanding and you never know when a photo will turn up a lead. Take a selfie with Clearview or search a celebrity to see how powerful the technology can be.

2. **Refer your colleagues.** The more people that search, the more successes. We want to make this advanced technology available to as many investigators as possible. If you think your colleagues might want to try Clearview out for themselves, just send their names and e-mail addresses to help@clearview.ai and we'll sign them all up too.

3. **Get Clearview for the long haul.** If you like Clearview at the end of your trial period and it's helping you solve cases, put us in touch with the appropriate person at your organization who can proceed with procurement.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Finally, please note the disclaimer at the bottom.

Best regards,

— Team Clearview

2. **Refer your colleagues.** The more people that search, the more successes. We want to make this advanced technology available to as many investigators as possible. If you think your colleagues might want to try Clearview out for themselves, just send their names and e-mail addresses to help@clearview.ai and we'll sign them all up too.

3. **Get Clearview for the long haul.** If you like Clearview at the end of your trial period and it's helping you solve cases, put us in touch with the appropriate person at your organization who can proceed with procurement.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Finally, please note the disclaimer at the bottom.

Best regards,

— Team Clearview

Hi Stephen Mooney,

You should have a setup email in your inbox shortly. It only takes one minute to install and start searching.

Here are three important tips for using Clearview:

1. **Search a lot.** Your Clearview account has **unlimited** searches. Don't stop at one search. See if you can reach 100 searches. It's a numbers game. Our database is always expanding and you never know when a photo will turn up a lead. Take a selfie with Clearview or search a celebrity to see how powerful the technology can be.

2. **Refer your colleagues.** The more people that search, the more successes. We want to make this advanced technology available to as many investigators as possible. If you think your colleagues might want to try Clearview out for themselves, just send their names and e-mail addresses to help@clearview.ai and we'll sign them all up too.

3. **Get Clearview for the long haul.** If you like Clearview at the end of your trial period and it's helping you solve cases, put us in touch with the appropriate person at your organization who can proceed with procurement.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Finally, please note the disclaimer at the bottom.

Best regards,

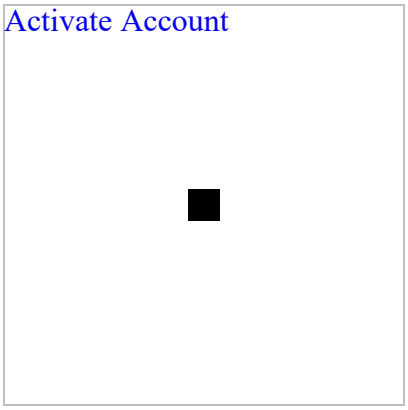
Hi Jamaal Littlejohn,

You have been invited to Clearview! **To activate your account please click the button below:**



Or click this link: https://clearview.ai/app/invite/2EFqyi3tyFlHjrhu

It only takes **one minute** to install and start searching.

Remember: your password must be 8 characters and contain a number.

What's Clearview?

Clearview is like **Google Search for faces.** Just upload a photo to the app and instantly get results from mug shots, social media, and other publicly available sources.

Our technology combines the **most accurate** facial identification software worldwide with the **single biggest** proprietary database of facial images to help you find the suspects you're looking for.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Best regards,
—Team Clearview

Hi Kelton Glorfield,

You have been invited to Clearview! **To activate your account please click the button below:**

Activate Account

It only takes **one minute** to install and start searching.

Remember: your password must be 8 characters and contain a number.

What's Clearview?

Clearview is like **Google Search for faces.** Just upload a photo to the app and instantly get results from mug shots, social media, and other publicly available sources.

Our technology combines the **most accurate** facial identification software worldwide with the **single biggest** proprietary database of facial images to help you find the suspects you're looking for.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Best regards,
—Team Clearview

Hi Jennifer Donmez,

How likely are you to recommend Clearview on a scale of 1-10? Please click the link below to let us know:

https://clearview.typeform.com/to/Pd1eoy?name=Jennifer+Donmez&email=jdonmez%40ci.fay.nc.us&phone=%2B19104018805&user_id=a31e67b4-482f-4015-a2c8-ec3f89037843

Your feedback will help us understand how investigators are using Clearview in the field and how we can improve Clearview so that it works even better for you.

Thank you for using Clearview!

Best,
Team Clearview

PS: If you have any issues or questions, just reply to this email or email help@clearview.ai

Subject: [EXTERNAL][POSSIBLE SPAM] Refer your colleagues to Clearview
Date: Thursday, March 5, 2020 10:04:26 AM
Importance: Low

Hi Brett Chandler,

Do you know any law enforcement officers who should try out Clearview? Just click or tap "Invite User" on the left-hand side of the screen when you're logged in to Clearview on desktop or mobile to refer them.

We'll get them set up with a free Clearview demo account immediately. Feel free to refer **as many officers and investigators** as you want. No limits. The more people searching, the more successes.

You can also send them the link to our website at www.clearview.ai and tell them to click the "Request Access" button, or send us their names and e-mail addresses by replying to this email or by sending an email to help@clearview.ai and we'll set them up.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Best regards,

—Team Clearview

Subject:	[EXTERNAL][POSSIBLE SPAM] Take a selfie with Clearview
Date:	Saturday, January 18, 2020 11:22:57 AM
Importance:	Low

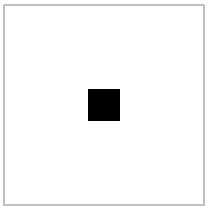
Hi Kimberly Thomas,

Have you tried taking a selfie with Clearview yet? See what comes up! It's the best way to quickly see the power of Clearview in real time. Try your friends or family. Or a celebrity like Joe Montana or George Clooney.

Your Clearview account has **unlimited** searches. So feel free to run wild with your searches. Test Clearview to the limit and see what it can do. The photos you search with Clearview are **always** private and **never** stored in our proprietary database, which is totally separate from the photos you search.

You can get Clearview on your iPhone or Android cell phone by clicking "Get Mobile App" on the left-hand side of the screen when you're logged in to Clearview on desktop.

To log in to Clearview on desktop just click the button below:



You can also upload a photo of yourself to Clearview on your desktop computer.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Best regards,

—Team Clearview

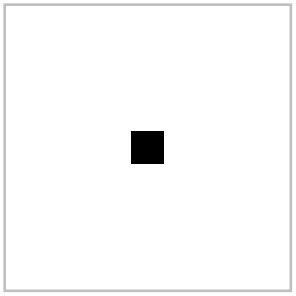
Welcome to Clearview AI's first customer newsletter - created just for our trusted law enforcement partners. We hope you enjoy this first edition and help us continue to recognize and celebrate the incredible work LEAs are doing across the country to help secure our communities.

Please add our email address info@clearview.ai to your contact or safe senders list today.

> "I hope your 2021 has been off to a great start! We here at Clearview AI have had a busy year so far and **we're excited to**



Hoan Ton-That
CEO & Co-Founder
hoan@clearview.ai

continue working hard and doing our part in supporting you.

What gets me up every day is hearing about the cases that our product gets to help solve like child abuse, the Capitol insurrections, cold cases, homicides, and the list goes on. **I feel honored that we get to play a small part in making your jobs more efficient.** We've really enjoyed working with you, learning about new functionalities you're looking for, expanding our product, and hearing your success stories.

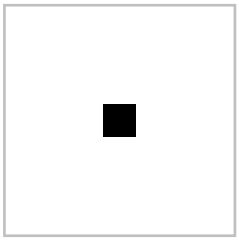
Please feel free to reach out to me with any questions you have and I'd be happy to help."

Clearview AI on the Front Cover of NYT Magazine

Read here about the history behind our NYC-based start-up and how **Clearview AI is paving the way for the broader acceptance and understanding of facial recognition.**

The Capitol riot is one example of an eye-opening event that is helping to change critics' perception of facial recognition and show the real value of a tool like Clearview AI. According to Hoan Ton-That, Co-Founder & CEO - "You see a lot of detractors change their mind for a somewhat different use case," he said. **"We are seeing wider acceptance of our platform."**

Clearview AI's tool is helping to identify and prosecute those that took part in such a heinous act.



Read the NYT

First use of Clearview AI Technology was a Success for Homeland Security Investigation

Using Clearview AI's technology, HSI was able to uncover the identity of a child exploitation suspect who later pleaded guilty to sexually assaulting a child and producing images of the abuse. The child was rescued and the perpetrator was sentenced to 35 years in prison.

"[Without Clearview AI] there was no way we would have found that guy. It has revolutionized how we are able to identify and rescue children. **It's only going to get better."**
- Erin Burke, Chief of HSI Child Exploitation Investigation Unit

Our Website has a Fresh New Look!

Q1 Industry Events Recap
So far in 2021 Clearview AI has attended several industry events, including:

- Winter Mississippi Chiefs of Police - Jan. 2021 - Ridgeland, MS
- National Fusion Center Association's Annual Training Event - Jan. 2021 - Virtual

- Wisconsin Police Leadership Foundation Training - Feb. 2021 - Wisconsin Dells, WI

If we missed you, we look forward to seeing you at the other events we plan to attend this year.

We're Here for You

It is Clearview AI's position to remain committed in revolutionizing facial recognition. Through collaboration with our customers, we can work together to expand the use cases of the technology and ensure its responsible use for public safety needs, as well as quickly implement new features and improvements based on suggestions from our clients.

Have a new feature suggestion, question, comment, concern? Locked out of your account? Need something else? Email us at help@clearview.ai and we'd be happy to help.

We'd love to hear your feedback on what topics you'd like to see more of and how we can better our email communication with you. Let us know today!

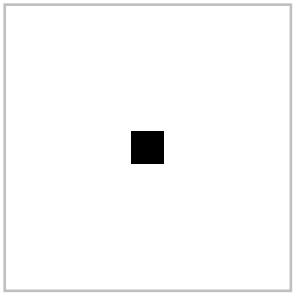
Welcome to Clearview AI's first customer newsletter - created just for our trusted law enforcement partners. We hope you enjoy this first edition and help us continue to recognize and celebrate the incredible work LEAs are doing across the country to help secure our communities.

Please add our email address info@clearview.ai to your contact or safe senders list today.

> "I hope your 2021 has been off to a great start! We here at Clearview AI have had a busy year so far and **we're excited to**



Hoan Ton-That
CEO & Co-Founder
hoan@clearview.ai

continue working hard and doing our part in supporting you.

What gets me up every day is hearing about the cases that our product gets to help solve like child abuse, the Capitol insurrections, cold cases, homicides, and the list goes on. **I feel honored that we get to play a small part in making your jobs more efficient.** We've really enjoyed working with you, learning about new functionalities you're looking for, expanding our product, and hearing your success stories.

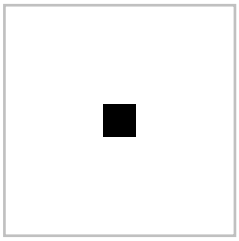
Please feel free to reach out to me with any questions you have and I'd be happy to help."

Clearview AI on the Front Cover of NYT Magazine

Read here about the history behind our NYC-based start-up and how **Clearview AI is paving the way for the broader acceptance and understanding of facial recognition.**

The Capitol riot is one example of an eye-opening event that is helping to change critics' perception of facial recognition and show the real value of a tool like Clearview AI. According to Hoan Ton-That, Co-Founder & CEO - "You see a lot of detractors change their mind for a somewhat different use case," he said. **"We are seeing wider acceptance of our platform."**

Clearview AI's tool is helping to identify and prosecute those that took part in such a heinous act.



Read the NYT

First use of Clearview AI Technology was a Success for Homeland Security Investigation

Using Clearview AI's technology, HSI was able to uncover the identity of a child exploitation suspect who later pleaded guilty to sexually assaulting a child and producing images of the abuse. The child was rescued and the perpetrator was sentenced to 35 years in prison.

"[Without Clearview AI] there was no way we would have found that guy. It has revolutionized how we are able to identify and rescue children. **It's only going to get better."**
- Erin Burke, Chief of HSI Child Exploitation Investigation Unit

Our Website has a Fresh New Look!

Have you visited www.clearview.ai recently? We've updated our website to highlight our technology's use cases and have added more opportunities to showcase the great work our customers are doing to solve crimes and keep our communities safer!

Q1 Industry Events Recap
So far in 2021 Clearview AI has attended several industry events, including:

- Winter Mississippi Chiefs of Police - Jan. 2021 - Ridgeland, MS
- National Fusion Center Association's Annual Training Event - Jan. 2021 - Virtual

- Wisconsin Police Leadership Foundation Training - Feb. 2021 - Wisconsin Dells, WI

If we missed you, we look forward to seeing you at the other events we plan to attend this year.

We're Here for You

It is Clearview AI's position to remain committed in revolutionizing facial recognition. Through collaboration with our customers, we can work together to expand the use cases of the technology and ensure its responsible use for public safety needs, as well as quickly implement new features and improvements based on suggestions from our clients.

Have a new feature suggestion, question, comment, concern? Locked out of your account? Need something else? Email us at help@clearview.ai and we'd be happy to help.

We'd love to hear your feedback on what topics you'd like to see more of and how we can better our email communication with you. Let us know today!

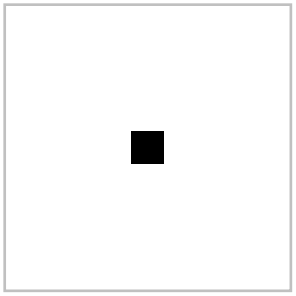
Welcome to Clearview AI's first customer newsletter - created just for our trusted law enforcement partners. We hope you enjoy this first edition and help us continue to recognize and celebrate the incredible work LEAs are doing across the country to help secure our communities.

Please add our email address info@clearview.ai to your contact or safe senders list today.

> "I hope your 2021 has been off to a great start! We here at Clearview AI have had a busy year so far and **we're excited to**



Hoan Ton-That
CEO & Co-Founder
hoan@clearview.ai

continue working hard and doing our part in supporting you.

What gets me up every day is hearing about the cases that our product gets to help solve like child abuse, the Capitol insurrections, cold cases, homicides, and the list goes on. **I feel honored that we get to play a small part in making your jobs more efficient.** We've really enjoyed working with you, learning about new functionalities you're looking for, expanding our product, and hearing your success stories.

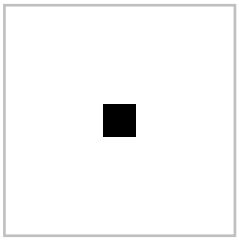
Please feel free to reach out to me with any questions you have and I'd be happy to help."

Clearview AI on the Front Cover of NYT Magazine

Read here about the history behind our NYC-based start-up and how **Clearview AI is paving the way for the broader acceptance and understanding of facial recognition.**

The Capitol riot is one example of an eye-opening event that is helping to change critics' perception of facial recognition and show the real value of a tool like Clearview AI. According to Hoan Ton-That, Co-Founder & CEO - "You see a lot of detractors change their mind for a somewhat different use case," he said. **"We are seeing wider acceptance of our platform."**

Clearview AI's tool is helping to identify and prosecute those that took part in such a heinous act.



Read the NYT

First use of Clearview AI Technology was a Success for Homeland Security Investigation

Using Clearview AI's technology, HSI was able to uncover the identity of a child exploitation suspect who later pleaded guilty to sexually assaulting a child and producing images of the abuse. The child was rescued and the perpetrator was sentenced to 35 years in prison.

"[Without Clearview AI] there was no way we would have found that guy. It has revolutionized how we are able to identify and rescue children. **It's only going to get better."**
- Erin Burke, Chief of HSI Child Exploitation Investigation Unit

Our Website has a Fresh New Look!

Have you visited www.clearview.ai recently? We've updated our website to highlight our technology's use cases and have added more opportunities to showcase the great work our customers are doing to solve crimes and keep our communities safer!

Don't miss our media page where you can see recent examples of Clearview AI in the media. Please continue to check back, as we'll be adding new content and pages soon!

Q1 Industry Events Recap
So far in 2021 Clearview AI has attended several industry events, including:

- Winter Mississippi Chiefs of Police - Jan. 2021 - Ridgeland, MS
- National Fusion Center Association's Annual Training Event - Jan. 2021 - Virtual

- Wisconsin Police Leadership Foundation Training - Feb. 2021 - Wisconsin Dells, WI

If we missed you, we look forward to seeing you at the other events we plan to attend this year.

We're Here for You

It is Clearview AI's position to remain committed in revolutionizing facial recognition. Through collaboration with our customers, we can work together to expand the use cases of the technology and ensure its responsible use for public safety needs, as well as quickly implement new features and improvements based on suggestions from our clients.

Have a new feature suggestion, question, comment, concern? Locked out of your account? Need something else? Email us at help@clearview.ai and we'd be happy to help.

We'd love to hear your feedback on what topics you'd like to see more of and how we can better our email communication with you. Let us know today!

Subject: [EXTERNAL]Can you get to 100 searches with Clearview?
Date: Saturday, January 25, 2020 11:50:36 AM

Hi Kimberly Richards,

Your Clearview account has **unlimited** searches. Don't stop at one search. Or ten. **Try to reach 100 searches with Clearview.**

Investigators who do 100+ Clearview searches have the best chances of **successfully solving crimes** with Clearview in our experience. It's the best way to thoroughly test the technology. You never know when a search will turn up a match. It only takes 1-5 seconds to find out with Clearview, unlike other facial identification systems.

The more searches, the more matches. It's a numbers game. The investigators who search the most are the investigators who solve the most cases. Our proprietary database is the biggest in the world and gets bigger every day. Every new day means more potential results from Clearview.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Best regards,

—Team Clearview

Your Clearview account has **unlimited** searches. Don't stop at one search. Or ten. **Try to reach 100 searches with Clearview.**

Investigators who do 100+ Clearview searches have the best chances of **successfully solving crimes** with Clearview in our experience. It's the best way to thoroughly test the technology. You never know when a search will turn up a match. It only takes 1-5 seconds to find out with Clearview, unlike other facial identification systems.

The more searches, the more matches. It's a numbers game. The investigators who search the most are the investigators who solve the most cases. Our proprietary database is the biggest in the world and gets bigger every day. Every new day means more potential results from Clearview.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Best regards,

—Team Clearview

Subject: [EXTERNAL]Can you get to 100 searches with Clearview AI?
Date: Saturday, August 1, 2020 8:01:30 AM

Hi R. Hedrick,

Your Clearview AI account has **unlimited** searches. Don't stop at one search. Or ten. **Try to reach 100 searches with Clearview AI.**

Investigators who do 100+ Clearview AI searches have the best chances of **solving crimes and saving lives** with Clearview AI. It's the only way to thoroughly test the technology. You never know when a search will turn up an important lead on a suspect or victim. It only takes 1-5 seconds to find out with Clearview, unlike other facial identification systems.

Investigators who search more, solve more. Our proprietary database is by far **the biggest in the world and growning - so each new day means more potential results from Clearview AI.**

Contact us anytime if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Thanks for your work!

—Team Clearview

FAQ - Clearview AI on Apple Devices - Effective 9-9-2020.pdf

Dear valued users,
Effective September 9, 2020, the Clearview AI iPhone/iPad app needs to be distributed with an Apple Enterprise Developer License.
The Enterprise Developer License is an Apple program that allows an organization to distribute iPhone and iPad apps to their employees privately. For compliance reasons, this is the only way to distribute the Clearview AI iOS application. Your organization administrator will be able to revoke access to the app at any time.
If your agency has an existing Apple Enterprise Developer License, we can work with your IT team to distribute the app to your end-users. If not, your IT team can purchase one here. Once you have a license, please put your IT department in touch with our team at ios-onboarding@clearview.ai and we'll take care of the rest.
Please note, our desktop and Android applications are still available for unlimited usage.
If you have additional questions, please review the attached FAQ's or contact us directly at ios-onboarding@clearview.ai .
Thanks,
Jess

Date: Wednesday, April 15, 2020 3:12:42 PM

To our valued customers:

Our primary services are currently experiencing a major outage due to an extended service disruption of a critical external vendor, called Cloudflare, which powers a lot of the internet's websites. We are actively monitoring their status and working to restore our core services as soon as possible.

We apologize for the inconvenience.

- The Clearview AI team

Hi there Rachael. I hope you are well. I have 2 separate requests for you to consider.

1. Would you be willing to participate in a video testimonial that we would coordinate filming for.

2. And would you be willing to take media interviews on using AI particularly Clearview AI in investigating crimes.

We are looking for LEOs that will talk publicly about their successes in using AI to solve crimes.

Date: Friday, April 16, 2021 11:11:47 AM

Hi Rachael, I hope all is well with you. As you likely know, we have a case in Illinois relating to their biometrics law (which has a law enforcement exception). We are requesting support from our users by collecting affidavits from law enforcement as to the effectiveness and benefits to law enforcement to resolve crimes quickly with the use of the investigative tool Clearview AI provides. If your agency is agreeable to this i think we could adjust the content of this letter and expand appropriately if you would like . Just let me know. We have to have these submitted by April 30, 2021.

Many thanks for any help you can provide,
Jess

Subject: [EXTERNAL]CV New Account
Date: Monday, February 24, 2020 3:51:06 PM

Hi, and thank you for your interest in Clearview. You should have an email from Team Clearview with your account activation link. We encourage you to test the technology through a web browser on your computer/laptop (log in thru https://app.clearview.ai/app/login) and the mobile app. Additionally, if there are any other officers that would like a demo account just send us names and email addresses and we will set them up.

In order to continue with the pilot program, we must also complete the following:

- Provide your full contact information, rank/title and division of law enforcement (typically your email signature block will suffice).
- Provide verification that the agency has approved the testing of Clearview and provide the name and contact information of the superior involved with this pilot.
- The agency must designate at least one administrator who will have the ability to monitor and manage the users.
- The agency must have at least one representative (preferably at least the administrator) participate in a brief webinar. We provide these on a regular basis or we can schedule one at a time convenient to your agency. This will help the agency's users understand the utilities and best practices when using our technology.
- When the 30 day trial is over we will need to discuss the best package for your agency or termination of the pilot.

Stay Safe and we look forward to working with you.

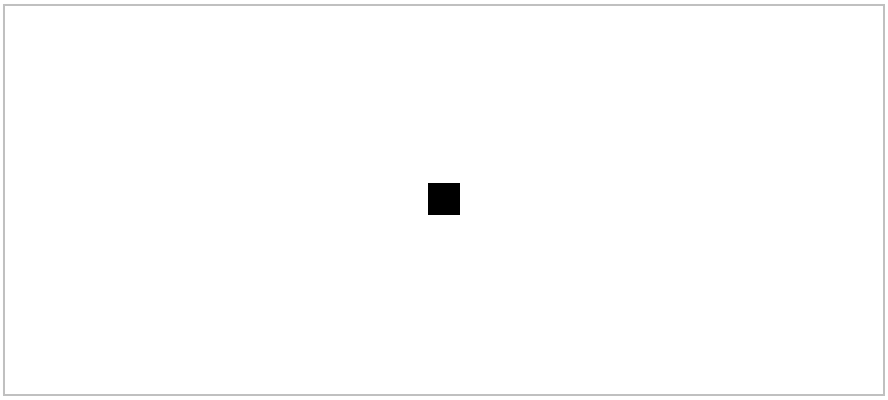
Hope all is well.

We're working on a new Clearview AI website, where we'd like to acknowledge some of our most valued customers.

We're looking forward to including agency logos for several others, and we'd be honored to include yours too. By agreeing, you will grant Clearview AI permission to use your agency logo on our publicly-accessible website for public relations and advertising purposes.

Mock-up of agency logos on website:



Please let us know if we have your permission to post your logo on our website, as well as include it in our external presentations, by replying to this email with a high-resolution copy of your agency's logo.

Thank you in advance.

Hi, I tried to leave you a voicemail but i got a recording saying the number was incorrect. I reached the desk clerk who is going to get you a message. I was contacting you to see if the check for payment of our invoice was ever sent. We do not show receipt. Could you also provide me with a direct phone number?
Also, would you be willing to serve as administrator for the department? The administrator will be able to monitor the usage and add test users. As for deploying a pilot, there is no cost, no limit to test users and no limit on number of searches. We encourage you to test the technology with multiple users from different areas (financial crimes, violent crimes, patrol, human trafficking, etc.) Additionally, if there are any other officers that would like a demo account just send me names and email addresses and I will set them up or your admin(s) can set them up.

Look forward to hearing from you,

Jess

Hi,

I just left a brief voice message for you. I am trying to see the status of the invoice for the Clearview licenses. Per the last correspondence 4/17/20 the invoice had been approved pending legal sign off. We also offer the option of paying by credit card. I appreciate your assistance.

Many thanks,

Jess

Hi, and thank you for your interest in Clearview. You should have an email from Team Clearview with your account activation link. After you activate your account you can log into your account at any time thru the following link: https://clearview.ai/app/login

Recently, because of how powerful and robust our technology is, we have certain self-regulatory practices placed upon us which require us to vet all external and active trial accounts to ensure that they are authorized by their LEA. Please let me know what your schedule permits for a follow-up.
We will need to get authorization from your command staff to continue your trial.We will need:

1. Organization's Legal Name
2. Organization's Size
3. Organization's Purchaser's Name and Contact information
4. Direct Supervisor's Name and Contact information
5. Appointed administrator for the site and site usage

I recommend scheduling a webinar to walk thru demos, learn about its utilities and ask question. Below is a list of webinar times or I can schedule one that suits your schedule.
I have also taken the liberty of sending you a quote should you decide to move to procurement after your pilot, or during the pilot.

Thanks again for your interest. I will look forward to hearing from you.

Wednesday Webinar:
Topic: Intro to Clearview for Law Enforcement
Zoom Meeting Link: https://us02web.zoom.us/j/85338109733
Every week on Wednesday, 1pm (ET), 12pm (CT), 11am (MT)

Stay Safe and I look forward to working with you.
Jess

Thank you for your payment of $11,000. You are licensed for eleven users. Please have the administrator update the users in their Clearview Back Office to reflect the accurate number of active licenses. Should you decide to expand your program and add more users, please let me know.

The renewal date is March 31, 2021. Just a reminder, you are the administrator and you are able to monitor the usage, turn off accounts and add additional licensed users. If you need to make any adjustments such as scheduling webinars, adding additional administrators, additional licenses, or if you would like to set up galleries of your own images that can be searched with the Clearview Ai please let me know.

Many thanks,

Jess

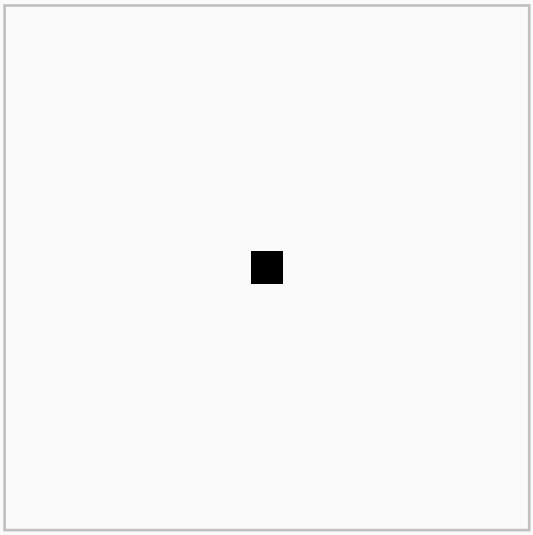
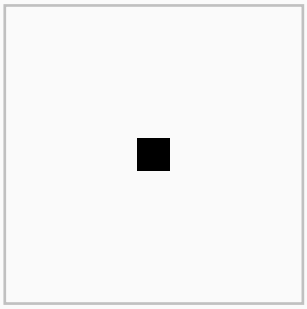
Subject: [EXTERNAL]Free Webinar this Thursday 9/24: Sex Crimes/ Human Trafficking
Date: Tuesday, September 22, 2020 3:05:26 PM





Solve Cases Faster: Utilizing AI Technology in Sex Crimes and Human Trafficking Cases

When investigating human trafficking and sex crimes, time is everything. Clearview AI is a revolutionary investigative tool helping law enforcement agencies solve these cases faster. Clearview AI can generate investigative leads by searching uploaded images against public web sources, including news media, mugshot websites, human trafficking sites, and public social media. Agencies can now import their own mugshot databases of any size into Clearview AI.

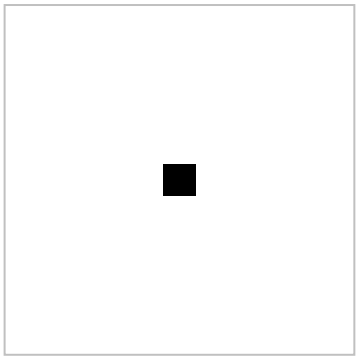
Register now to learn how Clearview AI's technology can be a game changer for your human trafficking investigations.

Please register ahead of time and with your LEA email address, as we will be vetting all sign-ups. Space will be limited.

Who's Presenting?

A panel of law enforcement agencies who have successfully used AI technology to rescue victims of human trafficking and sex crimes includes:

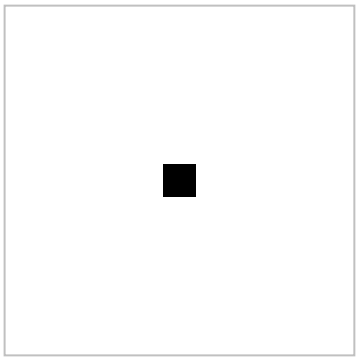
- Alabama Law Enforcement Agency (ALEA)
- South Carolina Department of Public Safety (SCDPS)
- Miami Police Department



Roger Rodriguez

Vice President, Sales at Clearview AI

As a former NYPD Detective Investigator involved with the development of the NYPD Real Time Crime Center and its Facial Identification Section, Roger Rodriguez is an advocate for the ethical and responsible use of police technology solutions. As a trusted C-level advisor, sales and business development team leader with reach into the North American, South American, EMEA and APAC markets, Roger serves as the VP, Sales for Clearview AI, ensuring policy adoption, privacy compliance, best practice workflows and better technology solutions for public safety.



Jessica Medeiros Garrison

Director, Business Development at Clearview AI

Jessica Medeiros Garrison is Director of Business Development and Sales Overlay (North America) for Clearview AI, Inc. She graduated from the University of Alabama with a Bachelor of Science in 1997 and from the University of Alabama School of Law with a Juris Doctor in December, 2000. As an attorney, she earned a partnership in her firm with a focus on commercial law. She has served as a Deputy Attorney General, Chief Counsel and Director of Public Relations and Legislative Affairs for various state Attorneys General. She has also served as the Executive Director of the Republican Attorneys General Association and as President of the Rule of Law Defense Fund. Jessica currently maintains her membership in the Birmingham Bar Association, Alabama Bar Association, the Society of International Business Fellows, and The Federalist Society.

Subject: [EXTERNAL]Hoan Ton-That to present at WSJ Tech Live on Oct 20th
Date: Friday, October 16, 2020 11:00:51 AM

TECHNOLOGY'S BIGGEST HEADLINES.

TECHNOLOGY'S BIGGEST HEADLINES.

DISCUSSED. DEBATED. MADE.

We're excited to announce that Hoan Ton-That, Clearview AI's Co-Founder and CEO will be presenting at **The Wall Street Journal's Global Tech Event October 19-21, 2020**.

Hoan's presentation **"Tech Demo: The Promise and Perils of Facial Recognition"** (Tuesday, October 20th at 11:55 AM EST) will focus on the Clearview AI application, highlighting its newest features and demonstrating its overall value for public safety investigations. Questions like how the data is collected and what it means for surveillance and the future of privacy will be answered. Hoan will be interviewed by Christopher Mims, Technology Columnist for The Wall Street Journal.

Hoan will also host a session named **"The Next Chapter in Law Enforcement: AI, Surveillance and Your Privacy"** (Tuesday, October 20th at 1:05 PM EST), where he will dive into the state of facial recognition and breaks down how the technology works with reporter Rolfe Winkler.

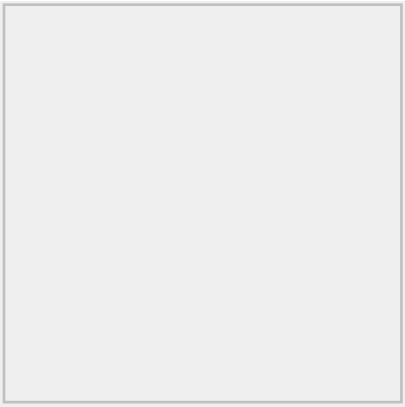
Event Website

Hoan Ton-That

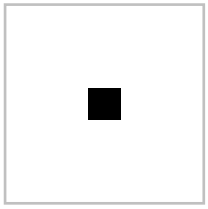
CEO and Co-Founder, Clearview AI

Hoan Ton-That is the CEO and co-founder of Clearview AI, which is based in New York City, and has created the next generation of facial recognition technology.

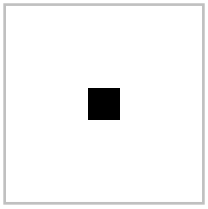
Clearview AI's bias-free algorithm can accurately find any face out of three billion images it has collected from the public internet. It is used by law enforcement to solve crimes, including financial fraud, human trafficking, and crimes against children.



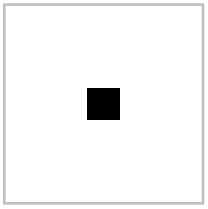
Hoan is honored to be presenting at WSJ Tech Live along with other industry game-changers, including:



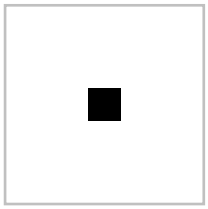
Melinda Gates
Co-Chair
Bill & Melinda Gates Foundation



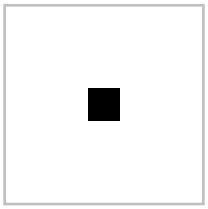
Eric Schmidt
Former Google CEO
and Chairman



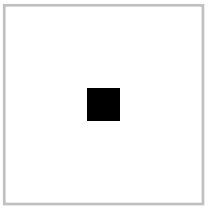
Julie Brill
Chief Privacy Officer
Microsoft Corp.



Ron Kirk
U.S. Trade Representative
(2009-2013)



Alex Stamos
Chief Security Officer
Facebook (2015-2018)



Dara Khosrowshah
CEO
Uber

TECHNOLOGY'S BIGGEST HEADLINES.

TECHNOLOGY'S BIGGEST HEADLINES.

DISCUSSED. DEBATED. MADE.

We're excited to announce that Hoan Ton-That, Clearview AI's Co-Founder and CEO will be presenting at **The Wall Street Journal's Global Tech Event October 19-21, 2020**.

Hoan's presentation **"Tech Demo: The Promise and Perils of Facial Recognition"** (Tuesday, October 20th at 11:55 AM EST) will focus on the Clearview AI application, highlighting its newest features and demonstrating its overall value for public safety investigations. Questions like how the data is collected and what it means for surveillance and the future of privacy will be answered. Hoan will be interviewed by Christopher Mims, Technology Columnist for The Wall Street Journal.

Hoan will also host a session named **"The Next Chapter in Law Enforcement: AI, Surveillance and Your Privacy"** (Tuesday, October 20th at 1:05 PM EST), where he will dive into the state of facial recognition and breaks down how the technology works with reporter Rolfe Winkler.

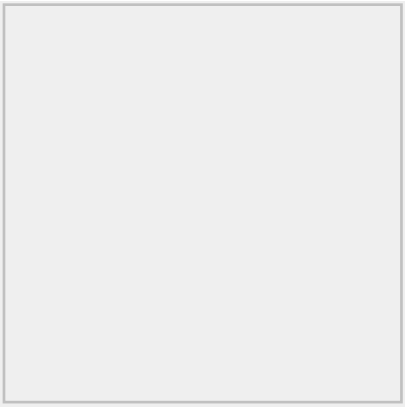
Event Website

Hoan Ton-That

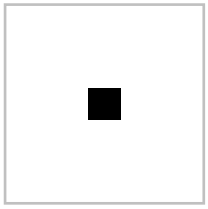
CEO and Co-Founder, Clearview AI

Hoan Ton-That is the CEO and co-founder of Clearview AI, which is based in New York City, and has created the next generation of facial recognition technology.

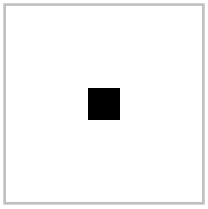
Clearview AI's bias-free algorithm can accurately find any face out of three billion images it has collected from the public internet. It is used by law enforcement to solve crimes, including financial fraud, human trafficking, and crimes against children.



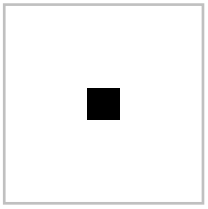
Hoan is honored to be presenting at WSJ Tech Live along with other industry game-changers, including:



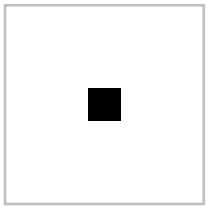
Melinda Gates
Co-Chair
Bill & Melinda Gates Foundation



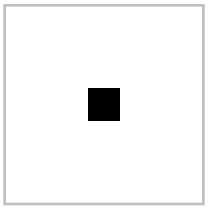
Eric Schmidt
Former Google CEO
and Chairman



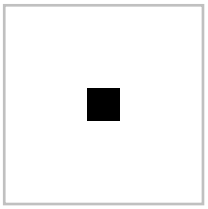
Julie Brill
Chief Privacy Officer
Microsoft Corp.



Ron Kirk
U.S. Trade Representative
(2009-2013)



Alex Stamos
Chief Security Officer
Facebook (2015-2018)



Dara Khosrowshah
CEO
Uber

Questions like how the data is collected and what it means for surveillance and the future of privacy will be answered. Hoan will be interviewed by Christopher Mims, Technology Columnist for The Wall Street Journal.

Hoan will also host a session named **"The Next Chapter in Law Enforcement: AI, Surveillance and Your Privacy"** (Tuesday, October 20th at 1:05 PM EST), where he will dive into the state of facial recognition and breaks down how the technology works with reporter Rolfe Winkler.

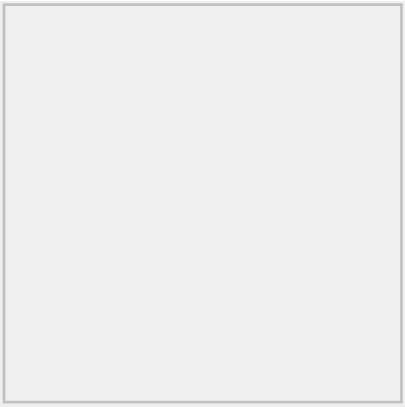
Event Website

Hoan Ton-That

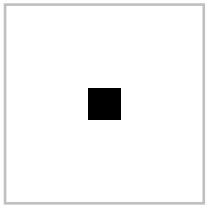
CEO and Co-Founder, Clearview AI

Hoan Ton-That is the CEO and co-founder of Clearview AI, which is based in New York City, and has created the next generation of facial recognition technology.

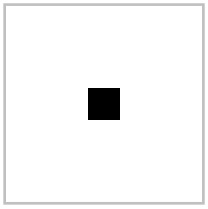
Clearview AI's bias-free algorithm can accurately find any face out of three billion images it has collected from the public internet. It is used by law enforcement to solve crimes, including financial fraud, human trafficking, and crimes against children.



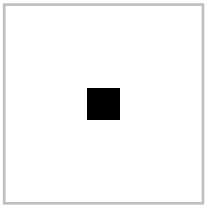
Hoan is honored to be presenting at WSJ Tech Live along with other industry game-changers, including:



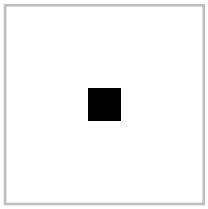
Melinda Gates
Co-Chair
Bill & Melinda Gates Foundation



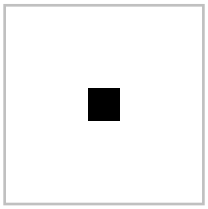
Eric Schmidt
Former Google CEO
and Chairman



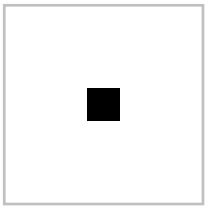
Julie Brill
Chief Privacy Officer
Microsoft Corp.



Ron Kirk
U.S. Trade Representative
(2009-2013)



Alex Stamos
Chief Security Officer
Facebook (2015-2018)



Dara Khosrowshah
CEO
Uber

Hi Kelton Glorfield,

How has Clearview been treating you so far? Take our quick 5-minute survey to let us know! Just click the link below to begin:

https://clearview.typeform.com/to/TdtBRX?name=Kelton+Glorfield&email=kglorfield%40ci.fay.nc.us&phone=%2B19107292833&user_id=9efffe3f-9d31-4f19-9983-6fb0ac839a9c

Your feedback will help us understand how investigators are using Clearview in the field and how we can improve Clearview so that it works even better for you.

Best,
Team Clearview

PS: If you have any issues or questions, just reply to this email or email help@clearview.ai

** CAUTION: External email. Do not click links or open attachments unless sender is verified. Send all suspicious email as an attachment to ITSecurity@ci.fay.nc.us **

Hi Dean Riggott,

You should have a setup email in your inbox shortly. It only takes one minute to install and start searching.

Here are three important tips for using Clearview:

1. **Search a lot.** Your Clearview account has **unlimited** searches. Don't stop at one search. See if you can reach 100 searches. It's a numbers game. Our database is always expanding and you never know when a photo will turn up a lead. Take a selfie with Clearview or search a celebrity to see how powerful the technology can be.

2. **Refer your colleagues.** The more people that search, the more successes. We want to make this advanced technology available to as many investigators as possible. If you think your colleagues might want to try Clearview out for themselves, just send their names and e-mail addresses to help@clearview.ai and we'll sign them all up too.

3. **Get Clearview for the long haul.** If you like Clearview at the end of your trial period and it's helping you solve cases, put us in touch with the appropriate person at your organization who can proceed with procurement.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Finally, please note the disclaimer at the bottom.

Best regards,

— Team Clearview

Welcome to the Clearview AI newsletter.

This is our opportunity to keep you updated on the latest news about Clearview AI.

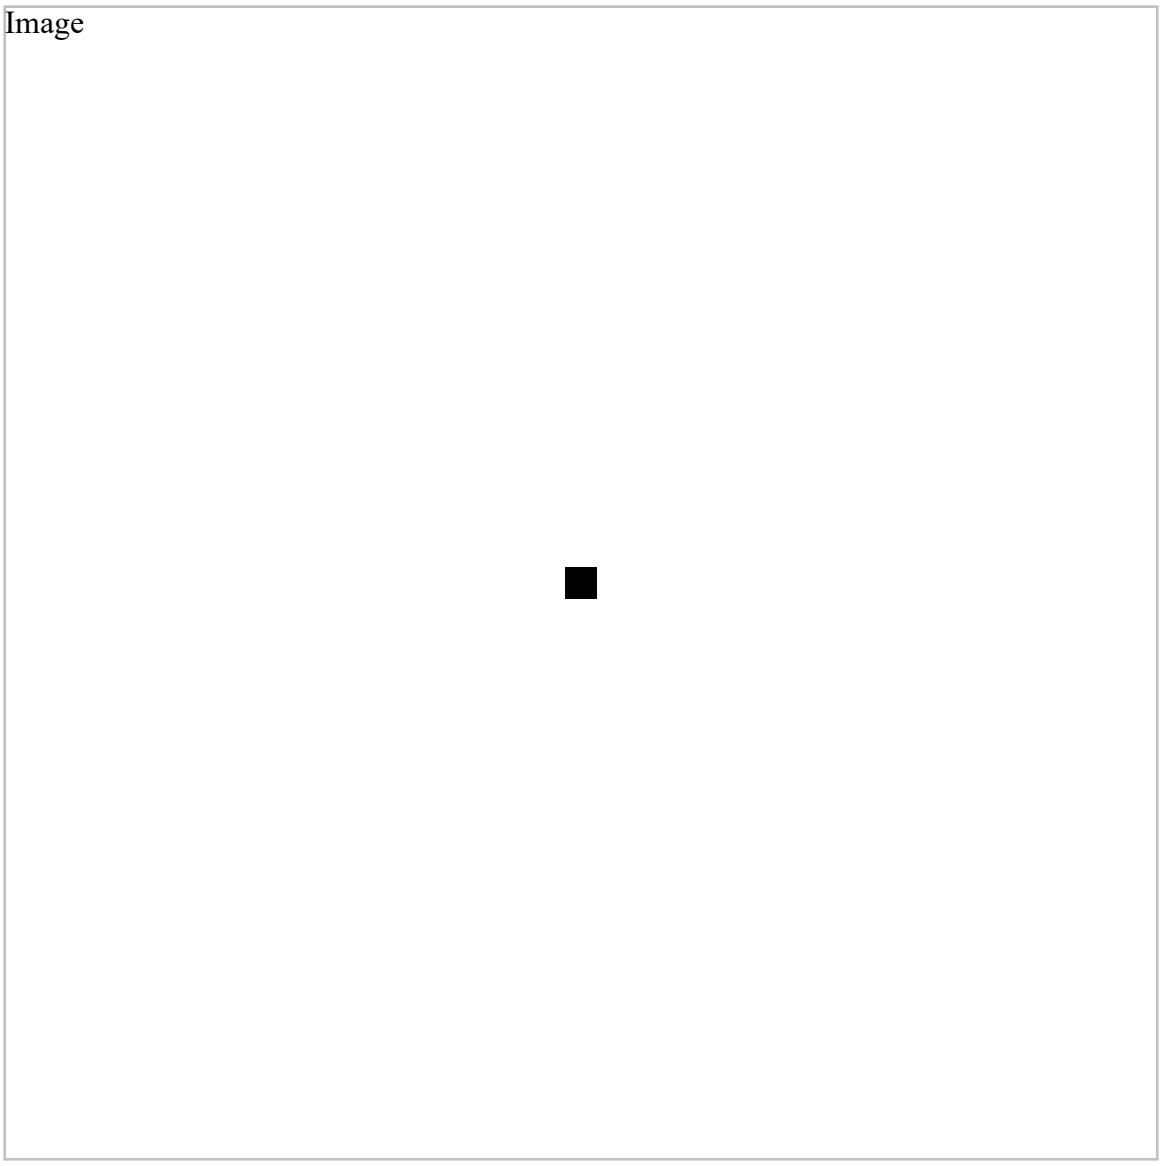
Thank you for searching with Clearview AI and please keep reading below:

<!--[if (!mso)&(!IE)]>

<!--[if (!mso)&(!IE)]>

Cybersecurity

Image



Security is our top priority, and we continue to fortify and upgrade our cybersecurity systems.
You may have noticed some new changes already, such as our log-in alerts. There will be more coming down the pipeline.

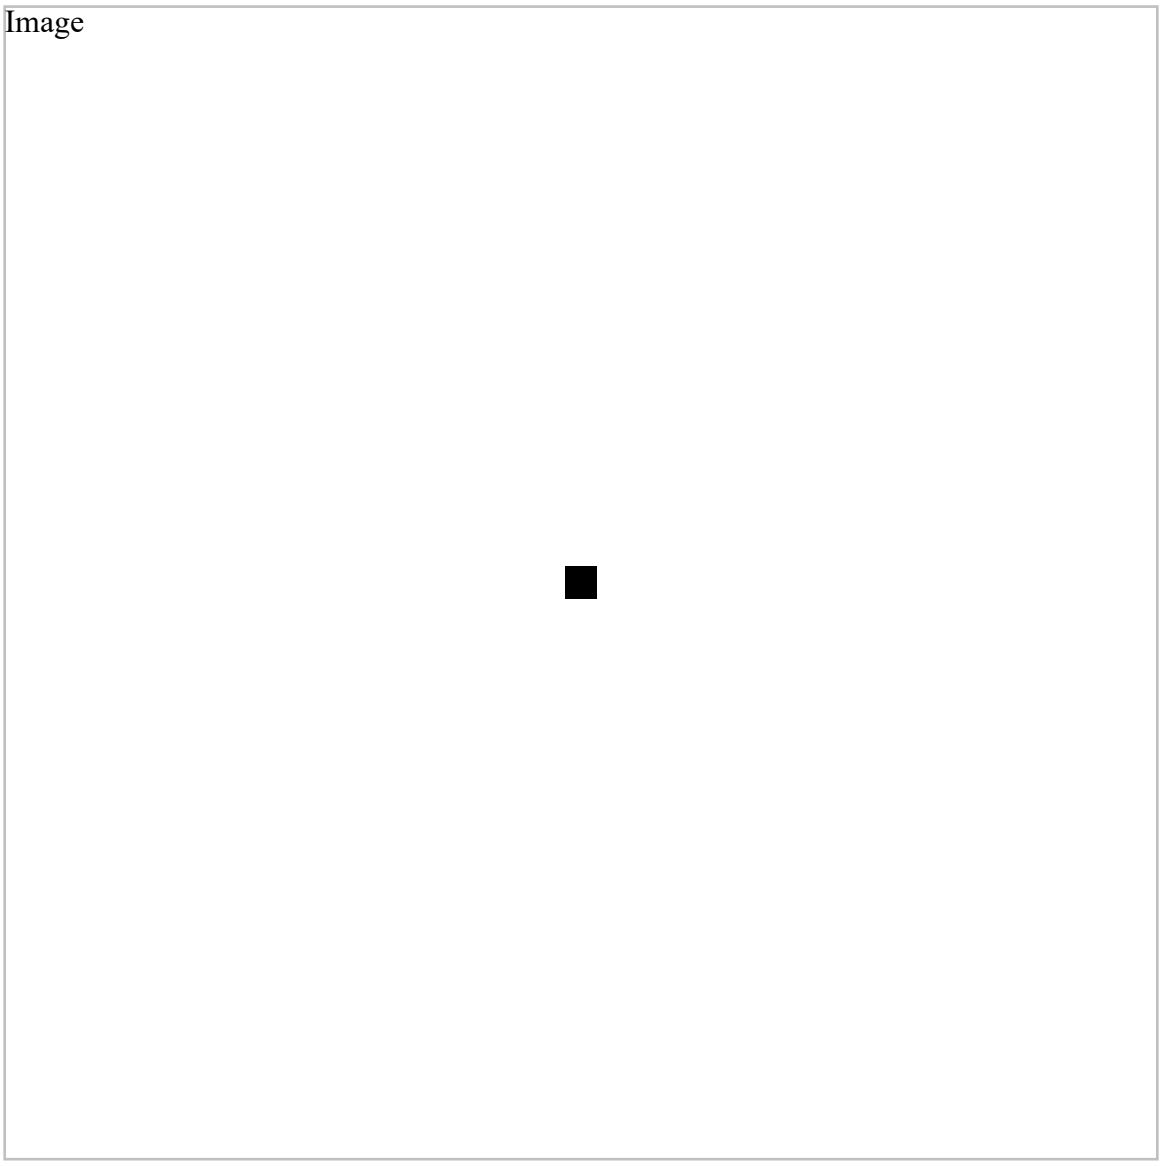
Remember to protect your Clearview AI account with a strong password that includes letters, numbers, and symbols. You can always update your password when you are logged in to Clearview on desktop using the menu on the left-hand side of the screen. Log in to Clearview AI here.

UPDATE: A month ago, someone gained unauthorized access to our organization list. No passwords or any personally identifiable information were revealed. Our servers were not breached. Once identified, the issue was resolved and repaired within 24 hours.

<!--[if (!mso)&(!IE)]>

<!--[if (!mso)&(!IE)]>

Clearview AI is up & running 24/7



Clearview AI operates like search engines such as Google and Bing. The difference is we collect far less data than those global search engines. Clearview AI only indexes public images and their web addresses.

Our database of more than 3 billion publicly available images from the open web continues to grow, and you can continue to search it. Clearview AI does not index private or protected data. Our service remains as broad and fast as it has ever been.

Clearview is working to help government officials understand our technology, addressing all legal inquiries appropriately. Clearview AI operates in accordance with the U.S. Constitution and American law and are confident that nothing will affect your ability to use our product.

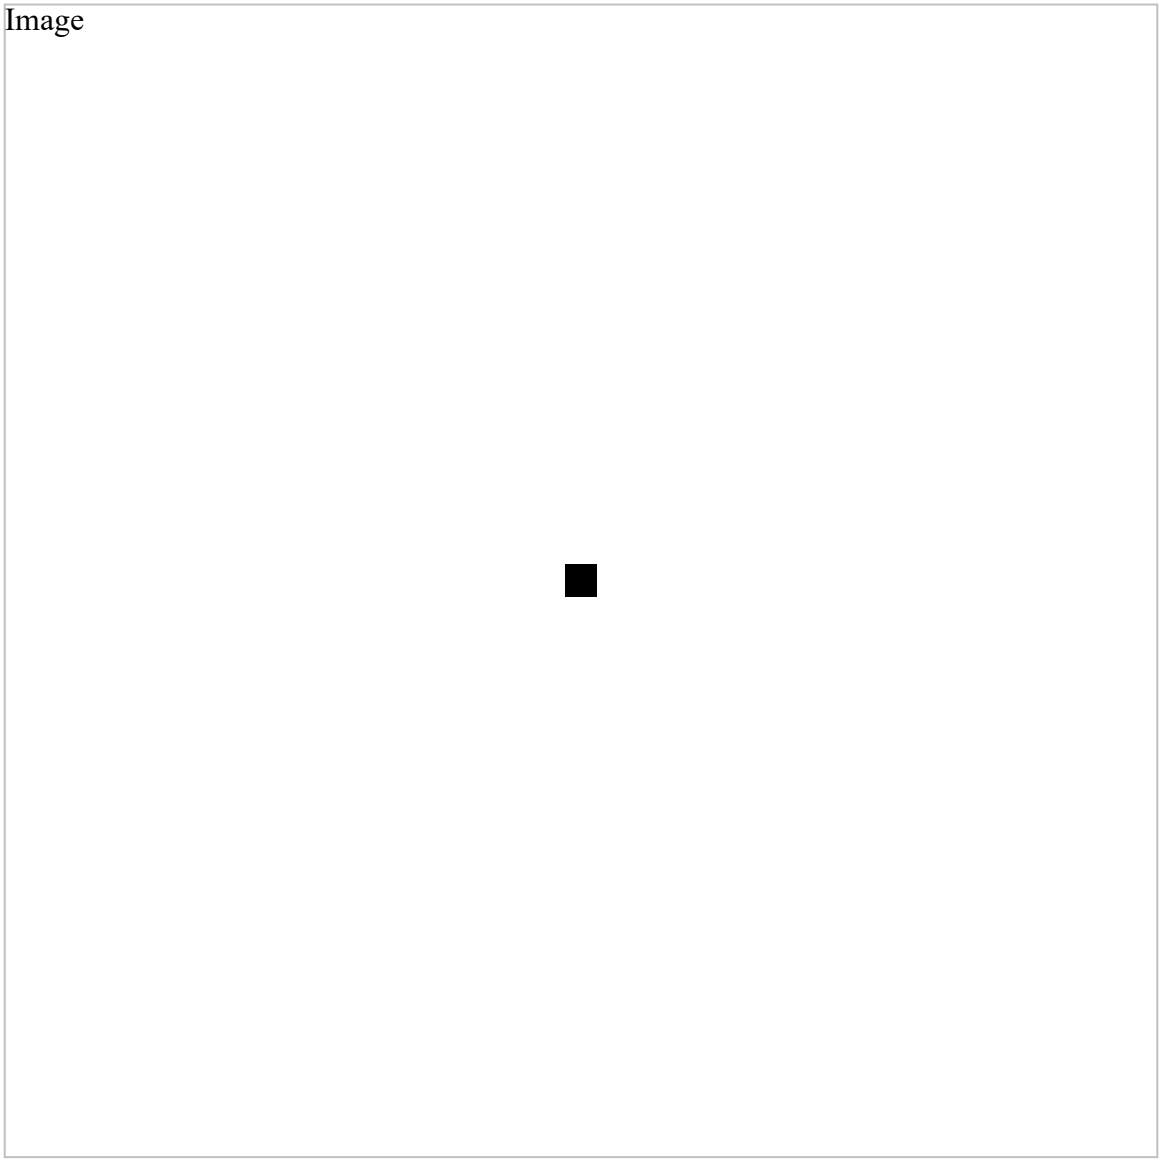
You can read our Legal White Paper by former Acting U.S. Attorney General and former U.S. Solicitor General Paul Clement here.

<!--[if (!mso)&(!IE)]>

<!--[if (!mso)&(!IE)]>

Search integrity

Image



Clearview AI continues to develop tools and guidelines for responsible use and integrity.

Like all investigative tools, it's important that Clearview AI is used properly. Remember to read and abide by our Code of Conduct and Terms of Service. Administrators can access full audit logs for their organizations at all times, and can use our audit tools to ensure appropriate use.

The Indiana Intelligence Fusion Center has developed an excellent set of policies that may be

helpful to your department. You can find the IIFC guidelines here.

<!--[if (!mso)&(!IE)]>

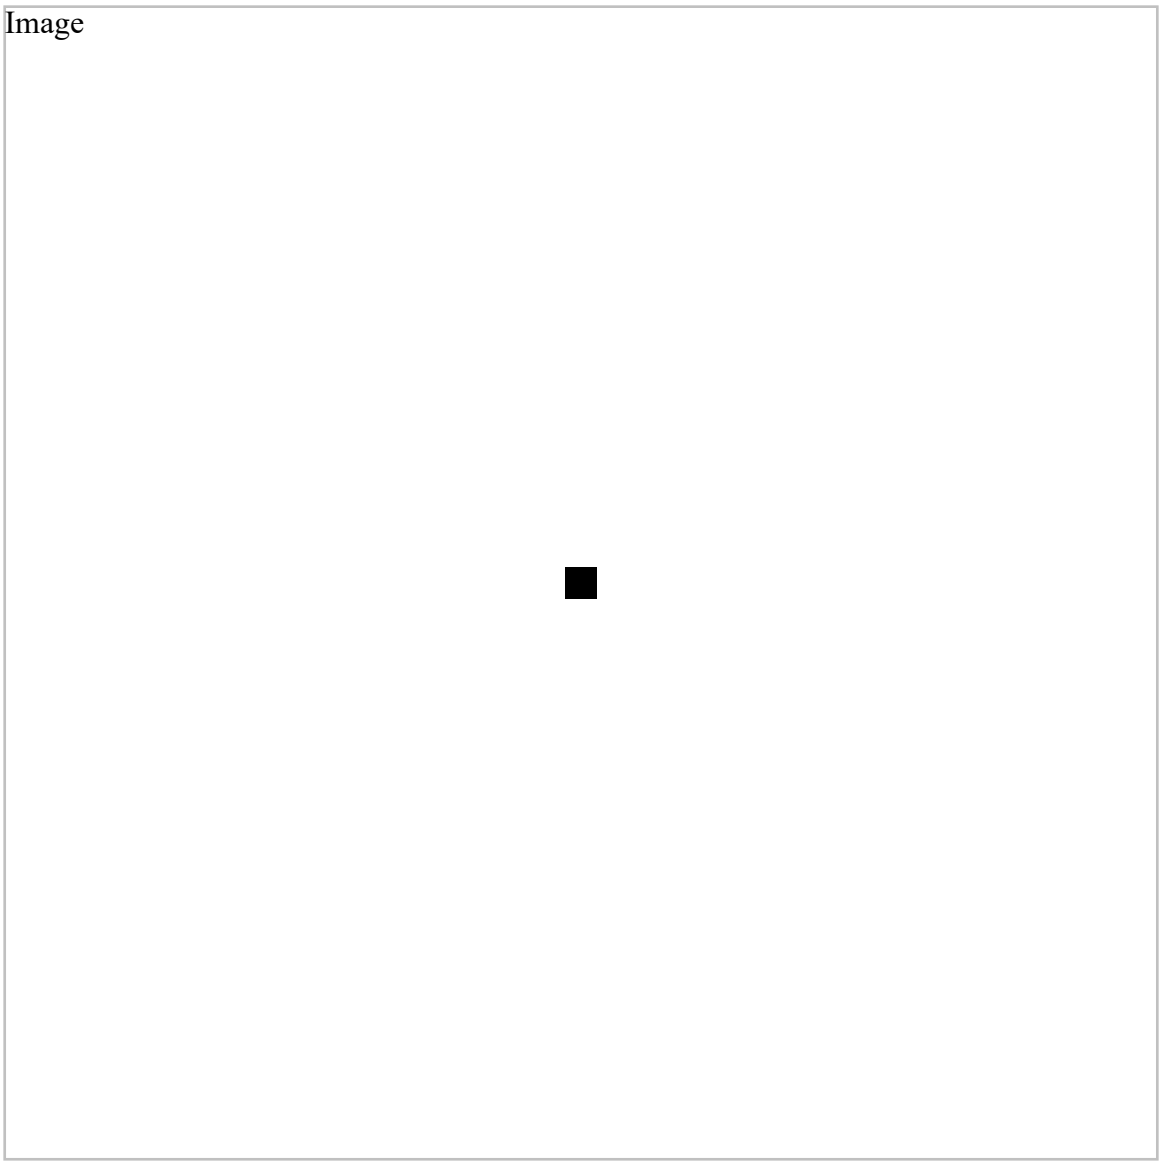
Cybersecurity

Image



Security is our top priority, and we continue to fortify and upgrade our cybersecurity systems.
You may have noticed some new changes already, such as our log-in alerts. There will be more coming down the pipeline.

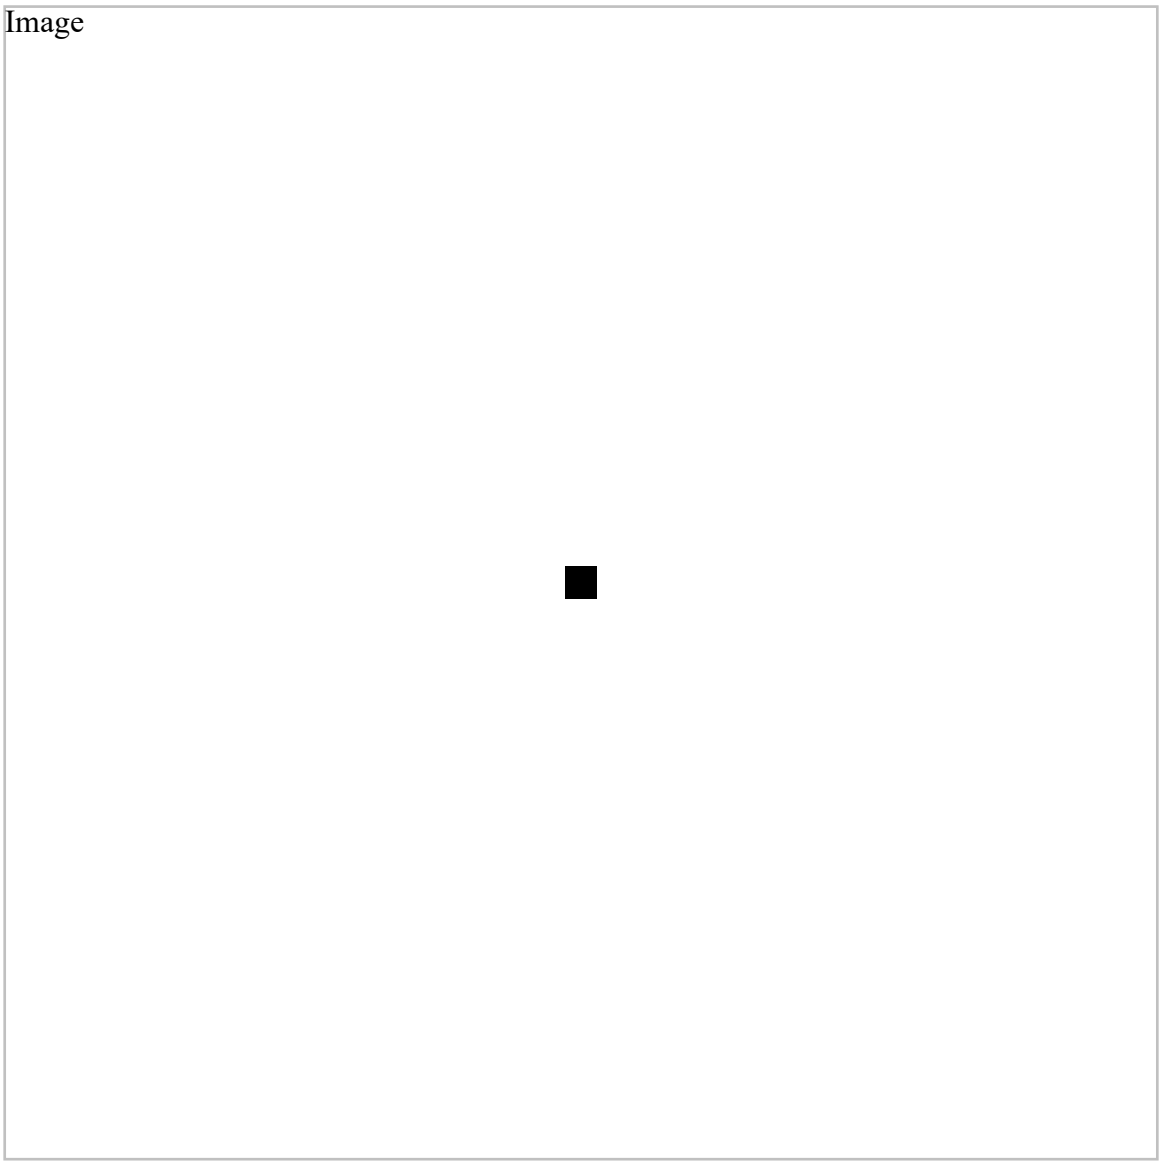
Remember to protect your Clearview AI account with a strong password that includes letters, numbers, and symbols. You can always update your password when you are logged in to Clearview on desktop using the menu on the left-hand side of the screen. Log in to Clearview AI here.

UPDATE: A month ago, someone gained unauthorized access to our organization list. No passwords or any personally identifiable information were revealed. Our servers were not breached. Once identified, the issue was resolved and repaired within 24 hours.

<!--[if (!mso)&(!IE)]>

<!--[if (!mso)&(!IE)]>

Clearview AI is up & running 24/7



Clearview AI operates like search engines such as Google and Bing. The difference is we collect far less data than those global search engines. Clearview AI only indexes public images and their web addresses.

Our database of more than 3 billion publicly available images from the open web continues to grow, and you can continue to search it. Clearview AI does not index private or protected data. Our service remains as broad and fast as it has ever been.

Clearview is working to help government officials understand our technology, addressing all legal inquiries appropriately. Clearview AI operates in accordance with the U.S. Constitution and American law and are confident that nothing will affect your ability to use our product.

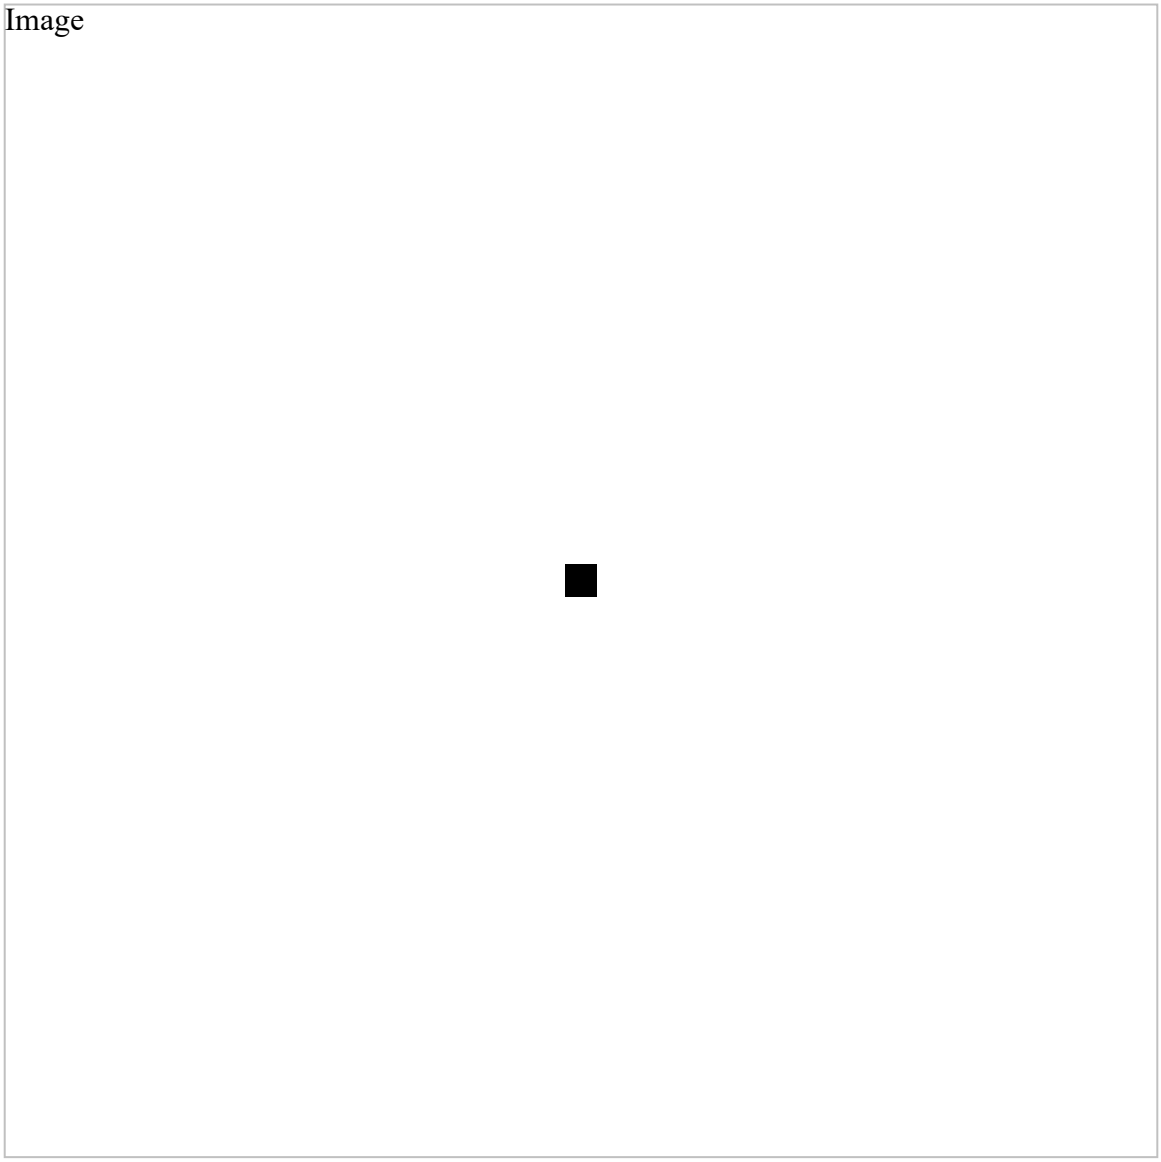
You can read our Legal White Paper by former Acting U.S. Attorney General and former U.S. Solicitor General Paul Clement here.

<!--[if (!mso)&(!IE)]>

<!--[if (!mso)&(!IE)]>

Search integrity

Image



Clearview AI continues to develop tools and guidelines for responsible use and integrity.

Like all investigative tools, it's important that Clearview AI is used properly. Remember to read and abide by our Code of Conduct and Terms of Service. Administrators can access full audit logs for their organizations at all times, and can use our audit tools to ensure appropriate use.

The Indiana Intelligence Fusion Center has developed an excellent set of policies that may be

helpful to your department. You can find the IIFC guidelines here.

<!--[if (!mso)&(!IE)]>

<!--[if (!mso)&(!IE)]>

Until next time. Stay safe.

Clearview AI continues to develop tools and guidelines for responsible use and integrity.

Like all investigative tools, it's important that Clearview AI is used properly. Remember to read and abide by our Code of Conduct and Terms of Service. Administrators can access full audit logs for their organizations at all times, and can use our audit tools to ensure appropriate use.

The Indiana Intelligence Fusion Center has developed an excellent set of policies that may be

helpful to your department. You can find the IIFC guidelines here.

Welcome to the Clearview AI newsletter.

This is our opportunity to keep you updated on the latest news about Clearview AI.

Thank you for searching with Clearview AI and please keep reading below:

<!--[if (!mso)&(!IE)]>

<!--[if (!mso)&(!IE)]>

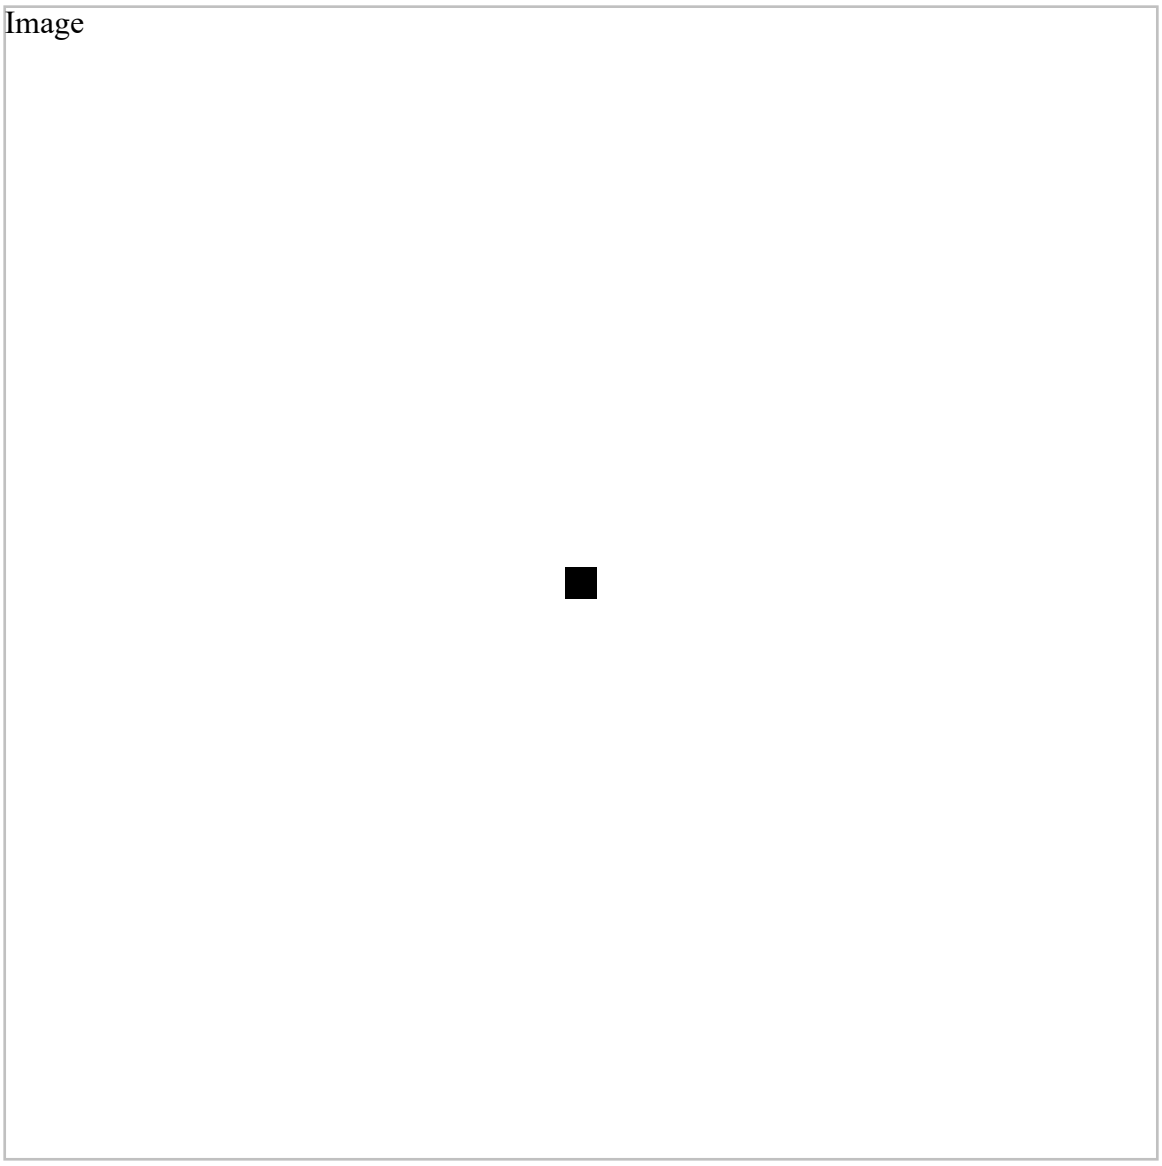
Cybersecurity

Image



Security is our top priority, and we continue to fortify and upgrade our cybersecurity systems.
You may have noticed some new changes already, such as our log-in alerts. There will be more coming down the pipeline.

Remember to protect your Clearview AI account with a strong password that includes letters, numbers, and symbols. You can always update your password when you are logged in to Clearview on desktop using the menu on the left-hand side of the screen. Log in to Clearview AI here.

UPDATE: A month ago, someone gained unauthorized access to our organization list. No passwords or any personally identifiable information were revealed. Our servers were not breached. Once identified, the issue was resolved and repaired within 24 hours.

<!--[if (!mso)&(!IE)]>

<!--[if (!mso)&(!IE)]>

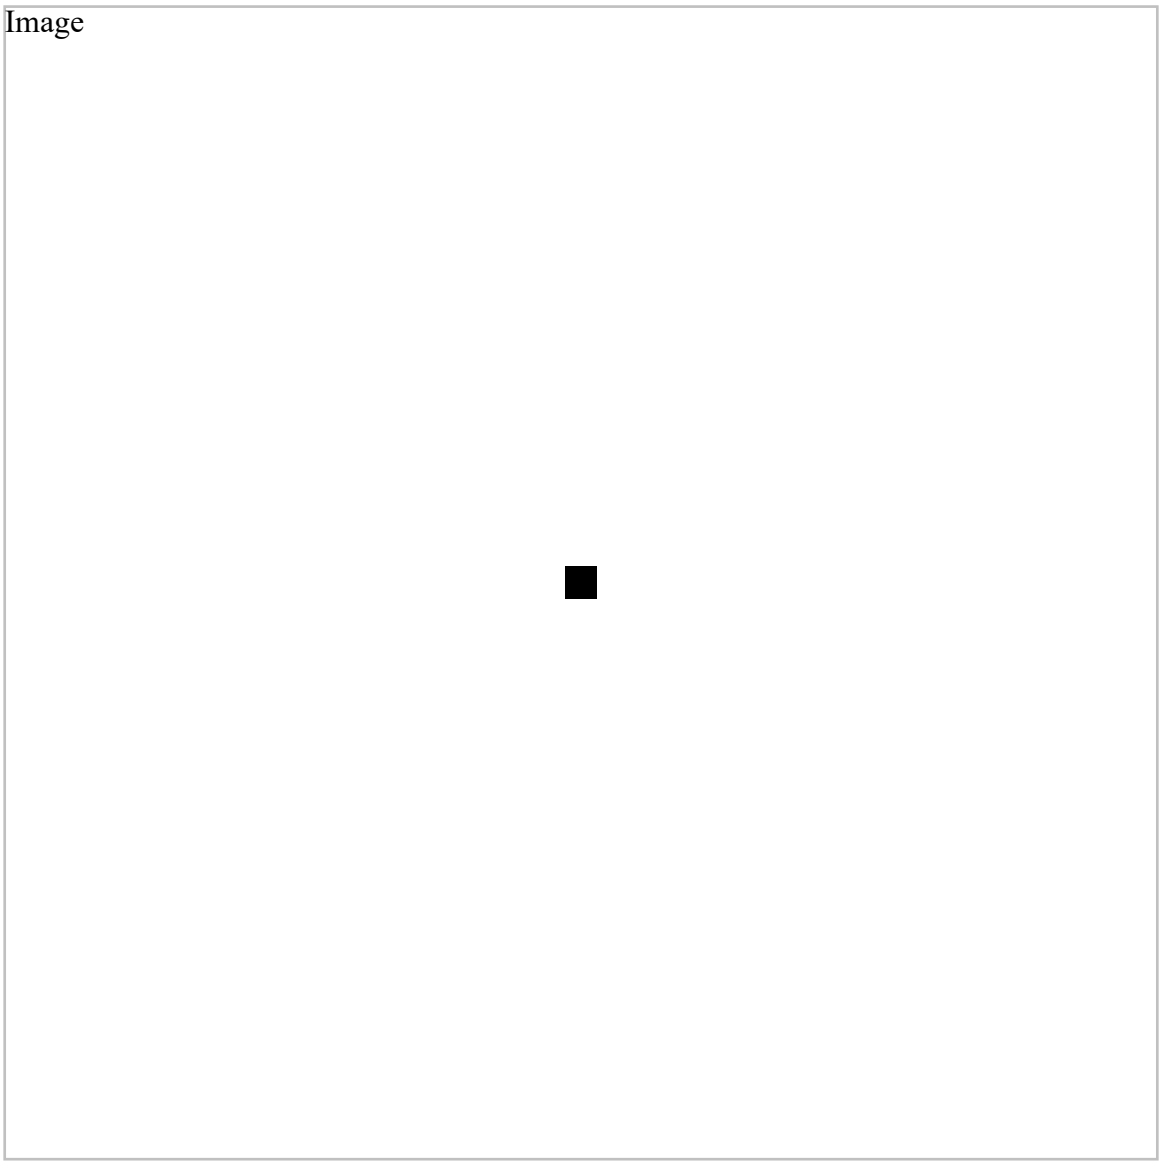
Clearview AI is up & running 24/7



Clearview AI operates like search engines such as Google and Bing. The difference is we collect far less data than those global search engines. Clearview AI only indexes public images and their web addresses.

Our database of more than 3 billion publicly available images from the open web continues to grow, and you can continue to search it. Clearview AI does not index private or protected data. Our service remains as broad and fast as it has ever been.

Clearview is working to help government officials understand our technology, addressing all legal inquiries appropriately. Clearview AI operates in accordance with the U.S. Constitution and American law and are confident that nothing will affect your ability to use our product.

You can read our Legal White Paper by former Acting U.S. Attorney General and former U.S. Solicitor General Paul Clement here.

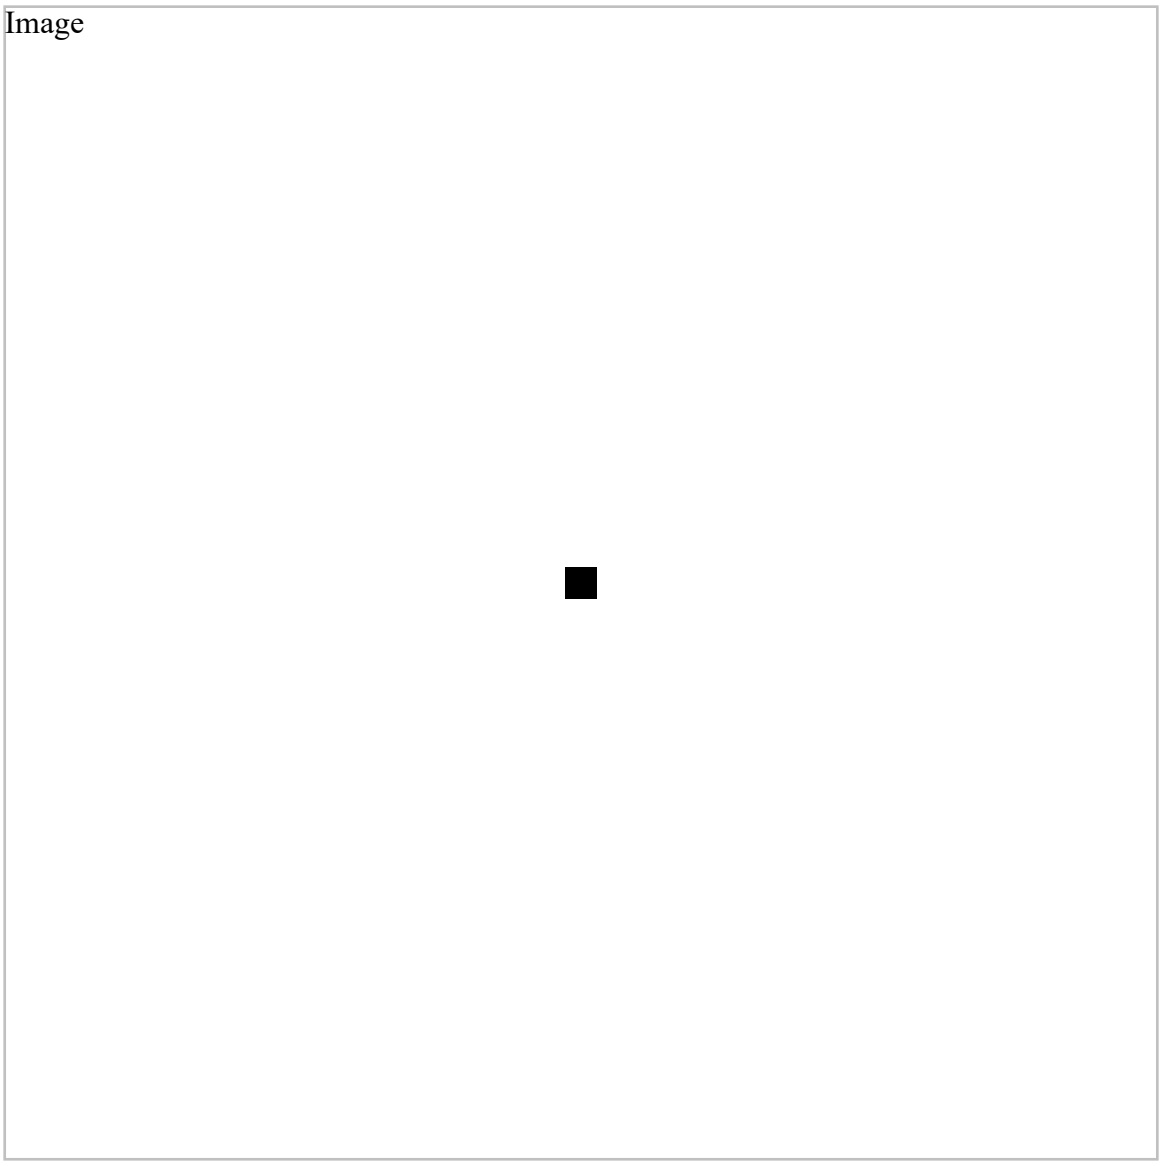
Cybersecurity

Image



Security is our top priority, and we continue to fortify and upgrade our cybersecurity systems.
You may have noticed some new changes already, such as our log-in alerts. There will be more coming down the pipeline.

Remember to protect your Clearview AI account with a strong password that includes letters, numbers, and symbols. You can always update your password when you are logged in to Clearview on desktop using the menu on the left-hand side of the screen. Log in to Clearview AI here.

UPDATE: A month ago, someone gained unauthorized access to our organization list. No passwords or any personally identifiable information were revealed. Our servers were not breached. Once identified, the issue was resolved and repaired within 24 hours.

<!--[if (!mso)&(!IE)]>

<!--[if (!mso)&(!IE)]>

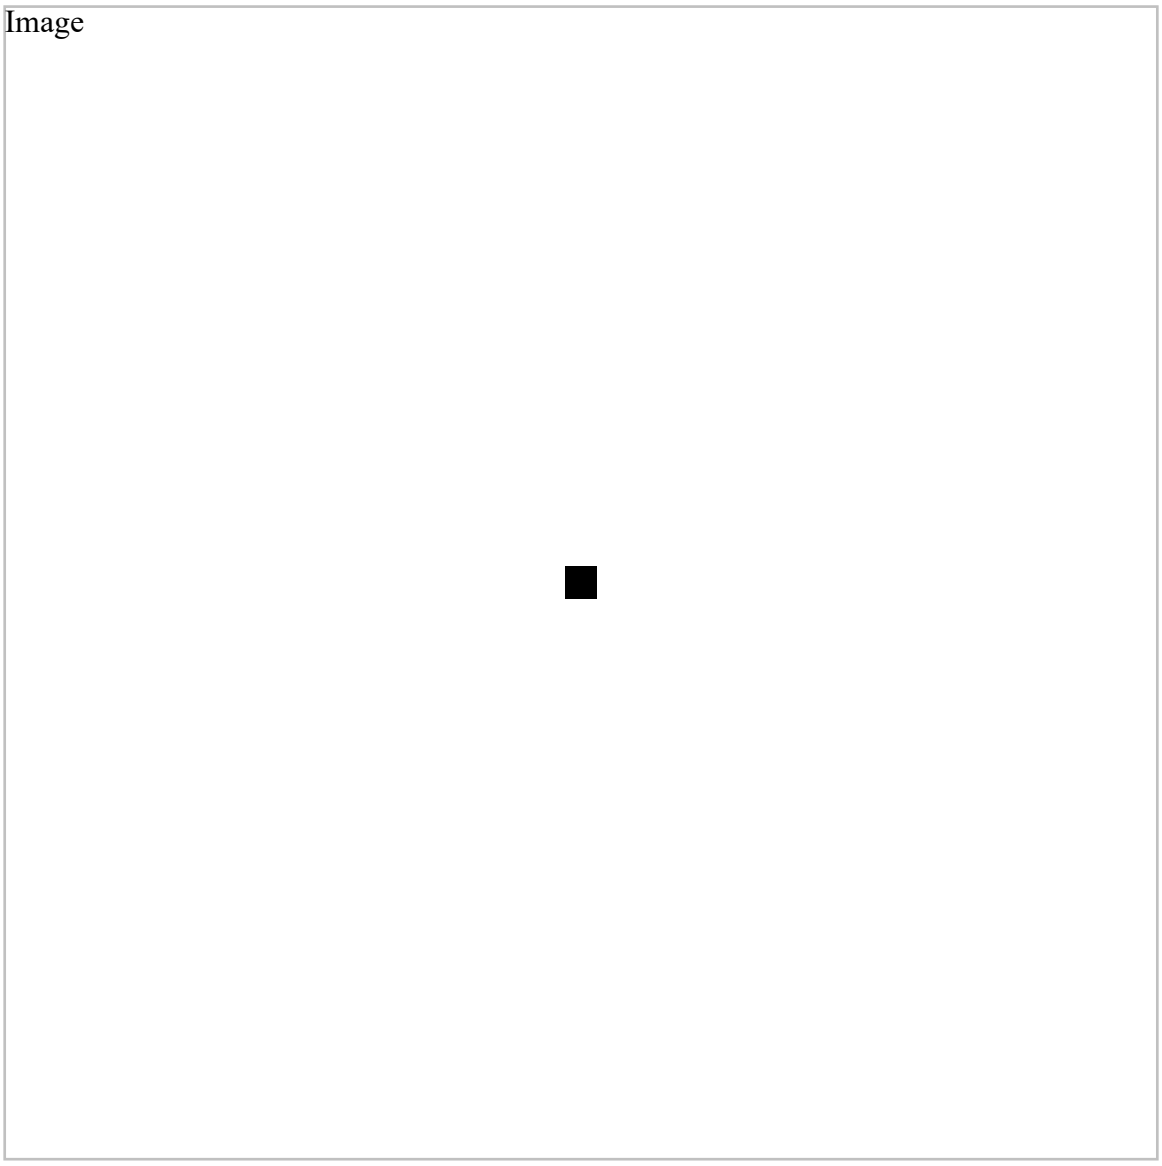
Clearview AI is up & running 24/7



Clearview AI operates like search engines such as Google and Bing. The difference is we collect far less data than those global search engines. Clearview AI only indexes public images and their web addresses.

Our database of more than 3 billion publicly available images from the open web continues to grow, and you can continue to search it. Clearview AI does not index private or protected data. Our service remains as broad and fast as it has ever been.

Clearview is working to help government officials understand our technology, addressing all legal inquiries appropriately. Clearview AI operates in accordance with the U.S. Constitution and American law and are confident that nothing will affect your ability to use our product.

You can read our Legal White Paper by former Acting U.S. Attorney General and former U.S. Solicitor General Paul Clement here.

<!--[if (!mso)&(!IE)]>

<!--[if (!mso)&(!IE)]>

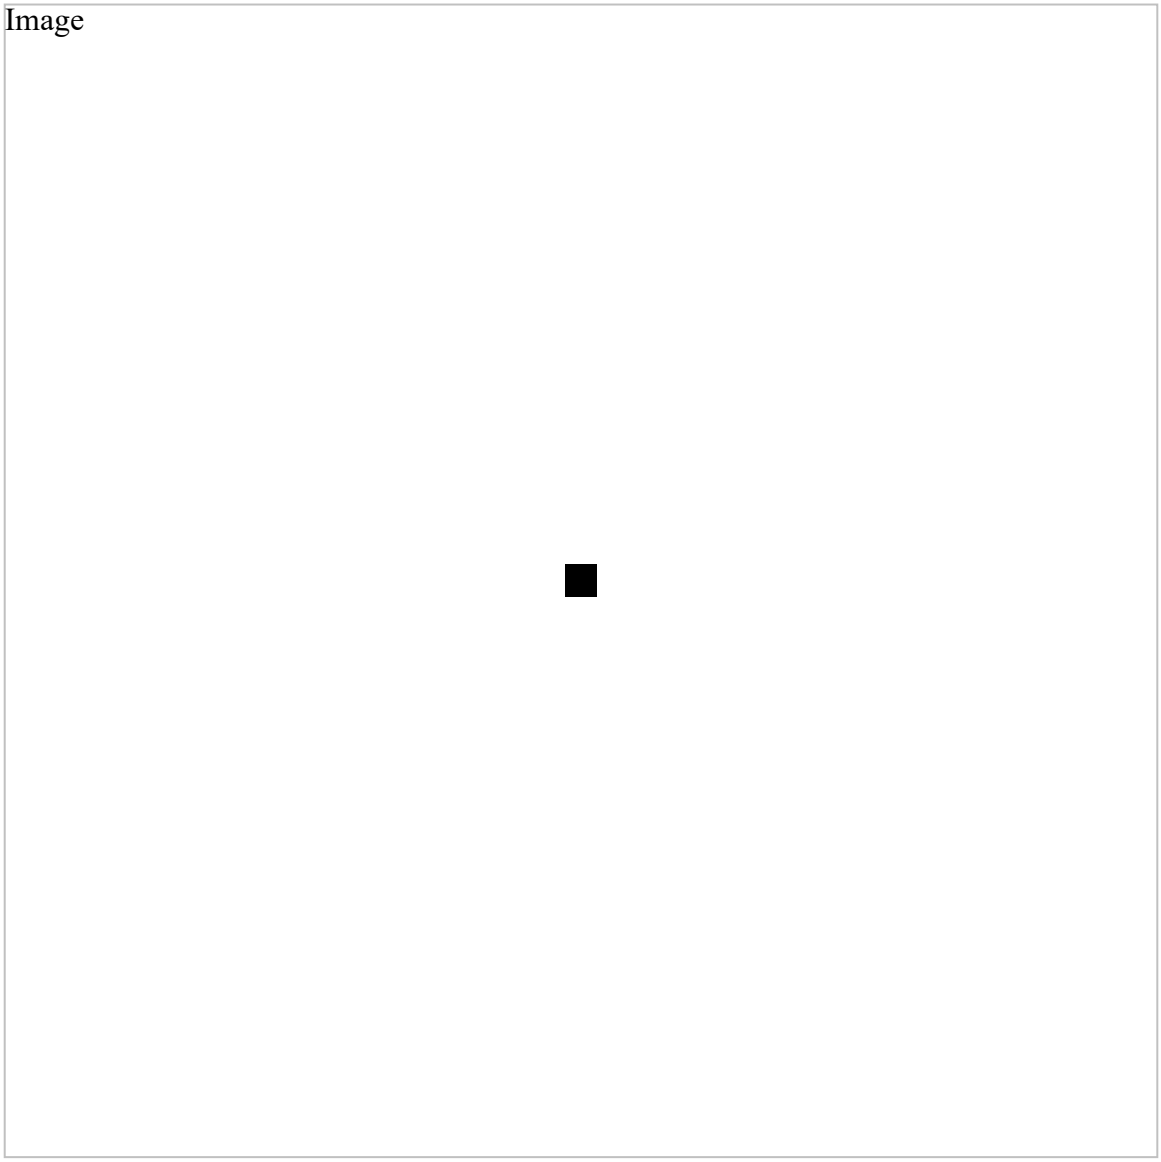
Search integrity

Image



Clearview AI continues to develop tools and guidelines for responsible use and integrity.

Like all investigative tools, it's important that Clearview AI is used properly. Remember to read and abide by our Code of Conduct and Terms of Service. Administrators can access full audit logs for their organizations at all times, and can use our audit tools to ensure appropriate use.

The Indiana Intelligence Fusion Center has developed an excellent set of policies that may be

helpful to your department. You can find the IIFC guidelines here.

<!--[if (!mso)&(!IE)]>

<!--[if (!mso)&(!IE)]>

Until next time. Stay safe.

Attachments: Clearview new 2020-1-1.png

Good morning,

I wanted to introduce myself, I joined Clearview AI as the Senior Director of the Southeast Region, so I will be responsible for your account moving forward.

Do you have a few minutes to jump on a call this week or next? I would love to get some feedback from you and see how things are going. I have quite a bit of flexibility, so if you can give me some times that would work, I'll send you a meeting invite.

Look forward to chatting soon,

Dorion Whitlock
Senior Director of Southeast Region
Cell: 205-413-5565

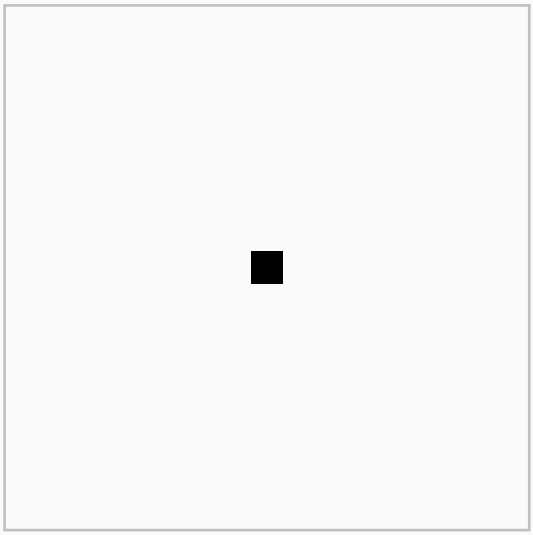
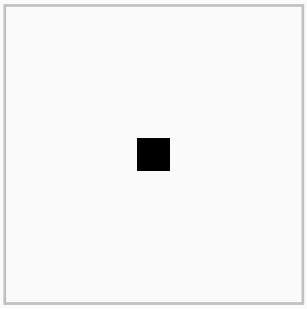
Date: Thursday, September 17, 2020 4:17:50 PM





Solve Cases Faster: Utilizing AI Technology in Sex Crimes and Human Trafficking Cases

When investigating human trafficking and sex crimes, time is everything. Clearview AI is a revolutionary investigative tool helping law enforcement agencies solve these cases faster. Clearview AI can generate investigative leads by searching uploaded images against public web sources, including news media, mugshot websites, human trafficking sites, and public social media. Agencies can now import their own mugshot databases of any size into Clearview AI.

Register now to learn how Clearview AI's technology can be a game changer for your human trafficking investigations.

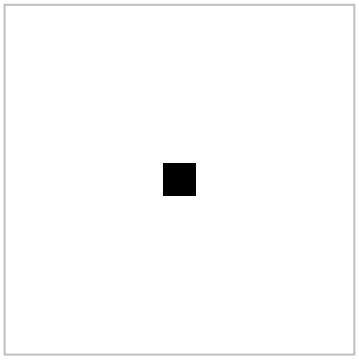
Please register ahead of time and with your LEA email address, as we will be vetting all sign-ups. Space will be limited.

Who's Presenting?

A panel of law enforcement agencies who have successfully used AI technology to rescue victims of human trafficking and sex crimes includes:

- Alabama Law Enforcement Agency (ALEA) - Jasmine Greene
- Homeland Security Investigations (HSI) - Cory Dunne
- South Carolina Department of Public Safety (SCDPS) - Roger Brock

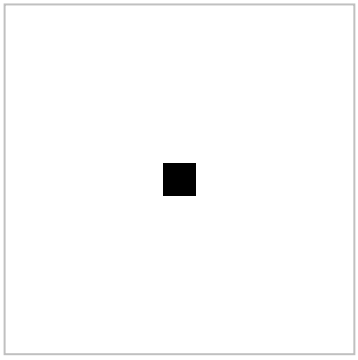
---



Roger Rodriguez

Vice President, Sales at Clearview AI

As a former NYPD Detective Investigator involved with the development of the NYPD Real Time Crime Center and its Facial Identification Section, Roger Rodriguez is an advocate for the ethical and responsible use of police technology solutions. As a trusted C-level advisor, sales and business development team leader with reach into the North American, South American, EMEA and APAC markets, Roger serves as the VP, Sales for Clearview AI, ensuring policy adoption, privacy compliance, best practice workflows and better technology solutions for public safety.



Jessica Medeiros Garrison

Director, Business Development at Clearview AI

Jessica Medeiros Garrison is Director of Business Development and Sales Overlay (North America) for Clearview AI, Inc. She graduated from the University of Alabama with a Bachelor of Science in 1997 and from the University of Alabama School of Law with a Juris Doctor in December, 2000. As an attorney, she earned a partnership in her firm with a focus on commercial law. She has served as a Deputy Attorney General, Chief Counsel and Director of Public Relations and Legislative Affairs for various state Attorneys General. She has also served as the Executive Director of the Republican Attorneys General Association and as President of the Rule of Law Defense Fund. Jessica currently maintains her membership in the Birmingham Bar Association, Alabama Bar Association, the Society of International Business Fellows, and The Federalist Society.

Subject: [EXTERNAL]New Features: Clearview AI
Date: Tuesday, November 17, 2020 12:43:46 PM

We are excited to announce the release of new and upcoming features available in Clearview AI

We're constantly working to improve your Clearview AI experience by creating the most comprehensive, secure facial recognition platform for governments and law enforcement agencies to build upon.

Many facial recognition solutions lack advanced admin tools, and user-friendly dashboards, reporting and metrics tools. However, we understand law enforcement agencies need these for increased accountability and transparency within their jurisdictions.

In the last few months, we have been tirelessly working to improve our product by collaborating alongside law enforcement agencies to create new features, an improved user experience, and help ensure its responsible use for public safety needs.

We are excited to announce the release of new and upcoming features available in Clearview AI

New Features:

Search Enrollment Intake Forms
Crime type and case number will be required for all searches. This allows for better auditing, and simple report generation. Save time tracking each search.

Usage Reporting & Auditing
Now, Convenient reports are generated based on intake enrollment data. Administrators can see specifics on how the tool is being used.

Revamped Admin Portal
User-friendly design provides administrators with easy-to-use tools they need to oversee the use of Clearview AI in their agency.

PDF Reports
Convenient ability to export a PDF version of the case(s) you are working on, including the ability to download a report of the image(s) and link(s) associated with your search.

Privacy & Security Updates:

Regular Security Audits
Clearview AI has regular security audits from top cybersecurity vendors like NCC Group and HackerOne.

Private and Secure Search History
Reminder: Only the administrators for your organization can view the search history of your users. It cannot be seen by any Clearview AI employees.

Introducing Clearview AI Galleries:

Customized Image Galleries
With galleries, agencies can import their own private, customized facial datasets such as mugshot repositories, customized watchlists, or any other facial database to have a comprehensive, unified platform for identity management. Contact us at galleries-onboarding@clearview.ai and we will be happy to further discuss uploading your agencies private image gallery.

In the Media:

The Wall Street Journal | Oct. 20, 2020
Facial-Recognition Startup Clearview AI Moves to Limit Risk of Police Abuse

Clearview AI would make available training and compliance features that help ensure police officers use

the technology ethically to solve crimes, though it would be up to police department heads to monitor officers and enforce the rules. CEO Hoan Ton-That added “We are here to help the government and fulfill their vision in keeping us safe.”

We are excited to announce the release of new and upcoming features available in Clearview AI

We're constantly working to improve your Clearview AI experience by creating the most comprehensive, secure facial recognition platform for governments and law enforcement agencies to build upon.

Many facial recognition solutions lack advanced admin tools, and user-friendly dashboards, reporting and metrics tools. However, we understand law enforcement agencies need these for increased accountability and transparency within their jurisdictions.

In the last few months, we have been tirelessly working to improve our product by collaborating alongside law enforcement agencies to create new features, an improved user experience, and help ensure its responsible use for public safety needs.

We are excited to announce the release of new and upcoming features available in Clearview AI

New Features:

Search Enrollment Intake Forms
Crime type and case number will be required for all searches. This allows for better auditing, and simple report generation. Save time tracking each search.

Usage Reporting & Auditing
Now, Convenient reports are generated based on intake enrollment data. Administrators can see specifics on how the tool is being used.

Revamped Admin Portal
User-friendly design provides administrators with easy-to-use tools they need to oversee the use of Clearview AI in their agency.

PDF Reports
Convenient ability to export a PDF version of the case(s) you are working on, including the ability to download a report of the image(s) and link(s) associated with your search.

Privacy & Security Updates:

Regular Security Audits
Clearview AI has regular security audits from top cybersecurity vendors like NCC Group and HackerOne.

Private and Secure Search History
Reminder: Only the administrators for your organization can view the search history of your users. It cannot be seen by any Clearview AI employees.

Introducing Clearview AI Galleries:

Customized Image Galleries
With galleries, agencies can import their own private, customized facial datasets such as mugshot repositories, customized watchlists, or any other facial database to have a comprehensive, unified platform for identity management. Contact us at galleries-onboarding@clearview.ai and we will be happy to further discuss uploading your agencies private image gallery.

In the Media:

The Wall Street Journal | Oct. 20, 2020
Facial-Recognition Startup Clearview AI Moves to Limit Risk of Police Abuse

Clearview AI would make available training and compliance features that help ensure police officers use

the technology ethically to solve crimes, though it would be up to police department heads to monitor officers and enforce the rules. CEO Hoan Ton-That added “We are here to help the government and fulfill their vision in keeping us safe.”

We're constantly working to improve your Clearview AI experience by creating the most comprehensive, secure facial recognition platform for governments and law enforcement agencies to build upon.

Many facial recognition solutions lack advanced admin tools, and user-friendly dashboards, reporting and metrics tools. However, we understand law enforcement agencies need these for increased accountability and transparency within their jurisdictions.

In the last few months, we have been tirelessly working to improve our product by collaborating alongside law enforcement agencies to create new features, an improved user experience, and help ensure its responsible use for public safety needs.

We are excited to announce the release of new and upcoming features available in Clearview AI

New Features:

Search Enrollment Intake Forms
Crime type and case number will be required for all searches. This allows for better auditing, and simple report generation. Save time tracking each search.

Usage Reporting & Auditing
Now, Convenient reports are generated based on intake enrollment data. Administrators can see specifics on how the tool is being used.

Revamped Admin Portal
User-friendly design provides administrators with easy-to-use tools they need to oversee the use of Clearview AI in their agency.

PDF Reports
Convenient ability to export a PDF version of the case(s) you are working on, including the ability to download a report of the image(s) and link(s) associated with your search.

Privacy & Security Updates:

Regular Security Audits
Clearview AI has regular security audits from top cybersecurity vendors like NCC Group and HackerOne.

Private and Secure Search History
Reminder: Only the administrators for your organization can view the search history of your users. It cannot be seen by any Clearview AI employees.

Introducing Clearview AI Galleries:

Customized Image Galleries
With galleries, agencies can import their own private, customized facial datasets such as mugshot repositories, customized watchlists, or any other facial database to have a comprehensive, unified platform for identity management. Contact us at galleries-onboarding@clearview.ai and we will be happy to further discuss uploading your agencies private image gallery.

In the Media:

The Wall Street Journal | Oct. 20, 2020
Facial-Recognition Startup Clearview AI Moves to Limit Risk of Police Abuse

Clearview AI would make available training and compliance features that help ensure police officers use

the technology ethically to solve crimes, though it would be up to police department heads to monitor officers and enforce the rules. CEO Hoan Ton-That added “We are here to help the government and fulfill their vision in keeping us safe.”

User-friendly design provides administrators with easy-to-use tools they need to oversee the use of Clearview AI in their agency.

PDF Reports
Convenient ability to export a PDF version of the case(s) you are working on, including the ability to download a report of the image(s) and link(s) associated with your search.

Privacy & Security Updates:

Regular Security Audits
Clearview AI has regular security audits from top cybersecurity vendors like NCC Group and HackerOne.

Private and Secure Search History
Reminder: Only the administrators for your organization can view the search history of your users. It cannot be seen by any Clearview AI employees.

Introducing Clearview AI Galleries:

Customized Image Galleries
With galleries, agencies can import their own private, customized facial datasets such as mugshot repositories, customized watchlists, or any other facial database to have a comprehensive, unified platform for identity management. Contact us at galleries-onboarding@clearview.ai and we will be happy to further discuss uploading your agencies private image gallery.

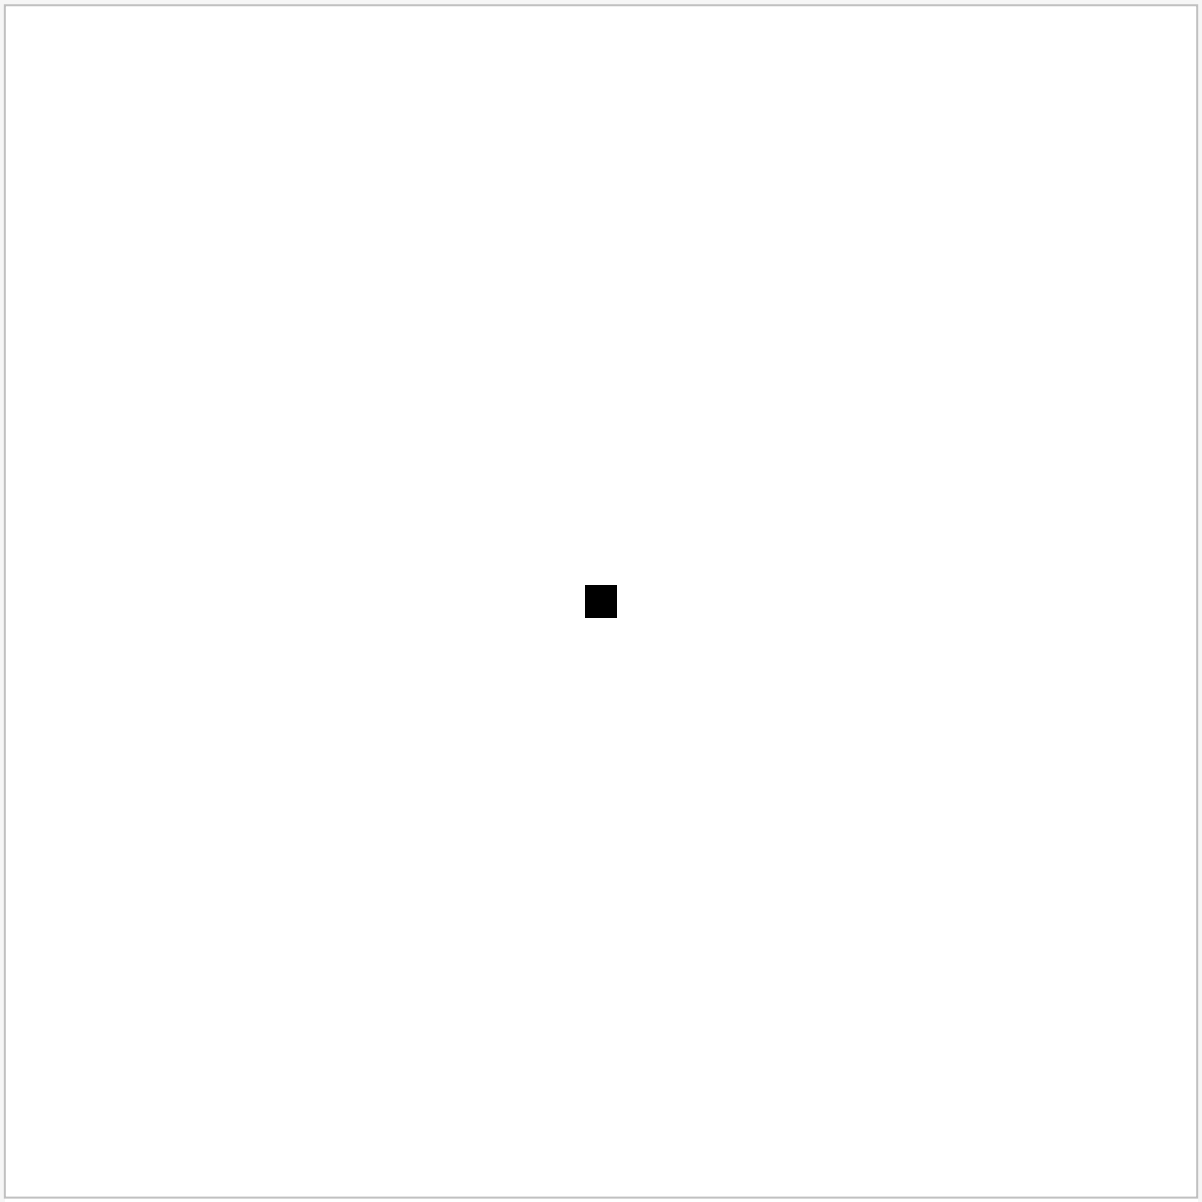
We are excited to announce the release of new and upcoming features available in Clearview AI



We're constantly working to improve your Clearview AI experience by creating the most comprehensive, secure facial recognition platform for governments and law enforcement agencies to build upon.

Many facial recognition solutions lack advanced admin tools, and user-friendly dashboards, reporting and metrics tools. However, we understand law enforcement agencies need these for increased accountability and transparency within their jurisdictions.

In the last few months, we have been tirelessly working to improve our product by collaborating alongside law enforcement agencies to create new features, an improved user experience, and help ensure its responsible use for public safety needs.

We are excited to announce the release of new and upcoming features available in Clearview AI

New Features:

Search Enrollment Intake Forms
Crime type and case number will be required for all searches. This allows for better auditing, and simple report generation. Save time tracking each search.

Usage Reporting & Auditing
Now, Convenient reports are generated based on intake enrollment data. Administrators can see specifics on how the tool is being used.

Revamped Admin Portal
User-friendly design provides administrators with easy-to-use tools they need to oversee the use of Clearview AI in their agency.

PDF Reports
Convenient ability to export a PDF version of the case(s) you are working on, including the ability to download a report of the image(s) and link(s) associated with your search.

Subject: [EXTERNAL]Op-Ed: Facial Recognition's Vital Role in Protecting Victims
Date: Wednesday, January 27, 2021 11:00:04 AM

REAL CLEAR POLITICS

Facial Recognition's Vital Role in Protecting Victims

As the founder of a victims' rights law firm focused on technology-facilitated sex crimes, I'm in the business of protecting my clients. That means making use of every tool available to keep them safe. Facial recognition is one of those tools. The events of this month have made it abundantly clear that facial recognition is here to stay.

On January 6, hundreds of people ransacked the U.S. Capitol. Americans understood that every available tool should be used to identify the insurrectionists.

Clearview AI was one of those tools; in a moment of unmitigated chaos, law enforcers saw it as a product that they could rely on. The company saw a 26% percent surge in usage after the riot.

This technology should also be leveraged to protect victims of Internet-induced violence, harassment, and fraud. In particular, law enforcement must become more proactive in investigating child sexual-abuse material (CSAM). The scale of the problem cannot be overstated. In 2019, more than 70 million images and videos were reported to the National Center for Missing and Exploited Children (NCMEC). The images exposed horrific instances of abuse, including rape and torture of infants, with the underlying acts of abuse depicting production, distribution, and possession. CSAM can remain online for decades, compounding a trauma to an unimaginable level.

Big Tech, with its encryption, live-streaming, and cloud-sharing options, has exacerbated the crisis. According to news reports, Facebook Messenger was responsible for 12 million of the 18.4 million reports of CSAM – meaning that the social-media giant is profiting from CSAM.

I first learned about Clearview AI last year, when the company asked me to conduct an independent review of its technology. I concluded that Clearview AI offers unprecedented capabilities to identify stalkers, rapists, child abusers, and other online predators and could discover previously unidentified child victims depicted in child sexual-abuse material proliferating online. I also realized that Clearview could potentially identify serial rapists – including those with outstanding restraining orders and already registered as sex offenders – who use dating apps as their personal concierge.

Facial-recognition technology is inherently controversial, and Clearview AI has gone through a maturation process as it has strengthened its code of conduct and user-accountability protocols. Critics are right to be concerned about privacy. However, unlike Big Tech, Clearview AI has carefully adopted best practices to ensure that only authorized law enforcers — investigating actual cases — have access to its powerful technology. Like all technology, it can be abused, but bad actors are flagged, reported, and permanently banned, even running the risk of losing their jobs.

Victims of CSAM deserve to know that they were targets of what many consider society's most vile and heinous crime. However, some child victims of sexual abuse may not realize that they were filmed or know that images of their sexual abuse are in circulation. Victims of CSAM have a federally mandated right to be notified when images depicting them are discovered during a criminal investigation. These victims deserve to know that they're on display online, and that they're eligible for special

federal funds to help them.

Clearview AI's technology may be the scalable solution to this confounding problem.

I have worked with hundreds of adult victims of nonconsensual pornography. Intimate images and videos of victims are sometimes disseminated for years before the depicted individuals discover that their privacy had been stolen from them. Clearview AI offers the possibility of rapid notification for these victims. Law enforcers could be empowered to notify victims of other websites that contain their intimate images and videos so that they can effectuate removal.

Law enforcement agencies across the country are already using technologies such as Clearview AI to apprehend child predators, drug traffickers, financial fraud rings, and murderers. These agencies want and need the technology.

All technology has the power to be used for good or for evil. As we say at my firm, it's not the technology that's bad – it's the potential misuse. Civil libertarian organizations like the ACLU have long been hostile toward laws that could protect victims of CSAM and revenge porn, acting instead in favor of untrammeled Big Tech and an unfettered Internet. It's inconsistent of these organizations to single out facial-recognition for scrutiny when they celebrate far more intrusive technologies. Rather than attack facial recognition, they should help develop a thoughtful regulatory plan that enables law enforcement to scale up its efforts to help victims. Facial recognition can and should be harnessed to make the world a safer place.

However, unlike Big Tech, Clearview AI has carefully adopted best practices to ensure that only authorized law enforcers — investigating actual cases — have access to its powerful technology. Like all technology, it can be abused, but bad actors are flagged, reported, and permanently banned, even running the risk of losing their jobs.

Victims of CSAM deserve to know that they were targets of what many consider society's most vile and heinous crime. However, some child victims of sexual abuse may not realize that they were filmed or know that images of their sexual abuse are in circulation. Victims of CSAM have a federally mandated right to be notified when images depicting them are discovered during a criminal investigation. These victims deserve to know that they're on display online, and that they're eligible for special

federal funds to help them.

Clearview AI's technology may be the scalable solution to this confounding problem.

I have worked with hundreds of adult victims of nonconsensual pornography. Intimate images and videos of victims are sometimes disseminated for years before the depicted individuals discover that their privacy had been stolen from them. Clearview AI offers the possibility of rapid notification for these victims. Law enforcers could be empowered to notify victims of other websites that contain their intimate images and videos so that they can effectuate removal.

Law enforcement agencies across the country are already using technologies such as Clearview AI to apprehend child predators, drug traffickers, financial fraud rings, and murderers. These agencies want and need the technology.

All technology has the power to be used for good or for evil. As we say at my firm, it's not the technology that's bad – it's the potential misuse. Civil libertarian organizations like the ACLU have long been hostile toward laws that could protect victims of CSAM and revenge porn, acting instead in favor of untrammeled Big Tech and an unfettered Internet. It's inconsistent of these organizations to single out facial-recognition for scrutiny when they celebrate far more intrusive technologies. Rather than attack facial recognition, they should help develop a thoughtful regulatory plan that enables law enforcement to scale up its efforts to help victims. Facial recognition can and should be harnessed to make the world a safer place.

REAL CLEAR POLITICS

Facial Recognition's Vital Role in Protecting Victims

As the founder of a victims' rights law firm focused on technology-facilitated sex crimes, I'm in the business of protecting my clients. That means making use of every tool available to keep them safe. Facial recognition is one of those tools. The events of this month have made it abundantly clear that facial recognition is here to stay.

On January 6, hundreds of people ransacked the U.S. Capitol. Americans understood that every available tool should be used to identify the insurrectionists.

Clearview AI was one of those tools; in a moment of unmitigated chaos, law enforcers saw it as a product that they could rely on. The company saw a 26% percent surge in usage after the riot.

This technology should also be leveraged to protect victims of Internet-induced violence, harassment, and fraud. In particular, law enforcement must become more proactive in investigating child sexual-abuse material (CSAM). The scale of the problem cannot be overstated. In 2019, more than 70 million images and videos were reported to the National Center for Missing and Exploited Children (NCMEC). The images exposed horrific instances of abuse, including rape and torture of infants, with the underlying acts of abuse depicting production, distribution, and possession. CSAM can remain online for decades, compounding a trauma to an unimaginable level.

Big Tech, with its encryption, live-streaming, and cloud-sharing options, has exacerbated the crisis. According to news reports, Facebook Messenger was responsible for 12 million of the 18.4 million reports of CSAM – meaning that the social-media giant is profiting from CSAM.

I first learned about Clearview AI last year, when the company asked me to conduct an independent review of its technology. I concluded that Clearview AI offers unprecedented capabilities to identify stalkers, rapists, child abusers, and other online predators and could discover previously unidentified child victims depicted in child sexual-abuse material proliferating online. I also realized that Clearview could potentially identify serial rapists – including those with outstanding restraining orders and already registered as sex offenders – who use dating apps as their personal concierge.

Facial-recognition technology is inherently controversial, and Clearview AI has gone through a maturation process as it has strengthened its code of conduct and user-accountability protocols. Critics are right to be concerned about privacy. However, unlike Big Tech, Clearview AI has carefully adopted best practices to ensure that only authorized law enforcers — investigating actual cases — have access to its powerful technology. Like all technology, it can be abused, but bad actors are flagged, reported, and permanently banned, even running the risk of losing their jobs.

REAL CLEAR POLITICS

Facial Recognition's Vital Role in Protecting Victims

As the founder of a victims' rights law firm focused on technology-facilitated sex crimes, I'm in the business of protecting my clients. That means making use of every tool available to keep them safe. Facial recognition is one of those tools. The events of this month have made it abundantly clear that facial recognition is here to stay.

On January 6, hundreds of people ransacked the U.S. Capitol. Americans understood that every available tool should be used to identify the insurrectionists.

Clearview AI was one of those tools; in a moment of unmitigated chaos, law enforcers saw it as a product that they could rely on. The company saw a 26% percent surge in usage after the riot.

This technology should also be leveraged to protect victims of Internet-induced violence, harassment, and fraud. In particular, law enforcement must become more proactive in investigating child sexual-abuse material (CSAM). The scale of the problem cannot be overstated. In 2019, more than 70 million images and videos were reported to the National Center for Missing and Exploited Children (NCMEC). The images exposed horrific instances of abuse, including rape and torture of infants, with the underlying acts of abuse depicting production, distribution, and possession. CSAM can remain online for decades, compounding a trauma to an unimaginable level.

Big Tech, with its encryption, live-streaming, and cloud-sharing options, has exacerbated the crisis. According to news reports, Facebook Messenger was responsible for 12 million of the 18.4 million reports of CSAM – meaning that the social-media giant is profiting from CSAM.

I first learned about Clearview AI last year, when the company asked me to conduct an independent review of its technology. I concluded that Clearview AI offers unprecedented capabilities to identify stalkers, rapists, child abusers, and other online predators and could discover previously unidentified child victims depicted in child sexual-abuse material proliferating online. I also realized that Clearview could potentially identify serial rapists – including those with outstanding restraining orders and already registered as sex offenders – who use dating apps as their personal concierge.

Facial-recognition technology is inherently controversial, and Clearview AI has gone through a maturation process as it has strengthened its code of conduct and user-accountability protocols. Critics are right to be concerned about privacy. However, unlike Big Tech, Clearview AI has carefully adopted best practices to ensure that only authorized law enforcers — investigating actual cases — have access to its powerful technology. Like all technology, it can be abused, but bad actors are flagged, reported, and permanently banned, even running the risk of losing their jobs.

Victims of CSAM deserve to know that they were targets of what many consider society's most vile and heinous crime. However, some child victims of sexual abuse may not realize that they were filmed or know that images of their sexual abuse are in circulation. Victims of CSAM have a federally mandated right to be notified when images depicting them are discovered during a criminal investigation. These victims deserve to know that they're on display online, and that they're eligible for special

federal funds to help them.

Clearview AI's technology may be the scalable solution to this confounding problem.

I have worked with hundreds of adult victims of nonconsensual pornography. Intimate images and videos of victims are sometimes disseminated for years before the depicted individuals discover that their privacy had been stolen from them. Clearview AI offers the possibility of rapid notification for these victims. Law enforcers could be empowered to notify victims of other websites that contain their intimate images and videos so that they can effectuate removal.

Law enforcement agencies across the country are already using technologies such as Clearview AI to apprehend child predators, drug traffickers, financial fraud rings, and murderers. These agencies want and need the technology.

All technology has the power to be used for good or for evil. As we say at my firm, it's not the technology that's bad – it's the potential misuse. Civil libertarian organizations like the ACLU have long been hostile toward laws that could protect victims of CSAM and revenge porn, acting instead in favor of untrammeled Big Tech and an unfettered Internet. It's inconsistent of these organizations to single out facial-recognition for scrutiny when they celebrate far more intrusive technologies. Rather than attack facial recognition, they should help develop a thoughtful regulatory plan that enables law enforcement to scale up its efforts to help victims. Facial recognition can and should be harnessed to make the world a safer place.

I concluded that Clearview AI offers unprecedented capabilities to identify stalkers, rapists, child abusers, and other online predators and could discover previously unidentified child victims depicted in child sexual-abuse material proliferating online. I also realized that Clearview could potentially identify serial rapists – including those with outstanding restraining orders and already registered as sex offenders – who use dating apps as their personal concierge.

Facial-recognition technology is inherently controversial, and Clearview AI has gone through a maturation process as it has strengthened its code of conduct and user-accountability protocols. Critics are right to be concerned about privacy. However, unlike Big Tech, Clearview AI has carefully adopted best practices to ensure that only authorized law enforcers — investigating actual cases — have access to its powerful technology. Like all technology, it can be abused, but bad actors are flagged, reported, and permanently banned, even running the risk of losing their jobs.

Victims of CSAM deserve to know that they were targets of what many consider society's most vile and heinous crime. However, some child victims of sexual abuse may not realize that they were filmed or know that images of their sexual abuse are in circulation. Victims of CSAM have a federally mandated right to be notified when images depicting them are discovered during a criminal investigation. These victims deserve to know that they're on display online, and that they're eligible for special

federal funds to help them.

Clearview AI's technology may be the scalable solution to this confounding problem.

I have worked with hundreds of adult victims of nonconsensual pornography. Intimate images and videos of victims are sometimes disseminated for years before the depicted individuals discover that their privacy had been stolen from them. Clearview AI offers the possibility of rapid notification for these victims. Law enforcers could be empowered to notify victims of other websites that contain their intimate images and videos so that they can effectuate removal.

Law enforcement agencies across the country are already using technologies such as Clearview AI to apprehend child predators, drug traffickers, financial fraud rings, and murderers. These agencies want and need the technology.

All technology has the power to be used for good or for evil. As we say at my firm, it's not the technology that's bad – it's the potential misuse. Civil libertarian organizations like the ACLU have long been hostile toward laws that could protect victims of CSAM and revenge porn, acting instead in favor of untrammeled Big Tech and an unfettered Internet. It's inconsistent of these organizations to single out facial-recognition for scrutiny when they celebrate far more intrusive technologies. Rather than attack facial recognition, they should help develop a thoughtful regulatory plan that enables law enforcement to scale up its efforts to help victims. Facial recognition can and should be harnessed to make the world a safer place.

REAL CLEAR POLITICS

Facial Recognition's Vital Role in Protecting Victims

As the founder of a victims' rights law firm focused on technology-facilitated sex crimes, I'm in the business of protecting my clients. That means making use of every tool available to keep them safe. Facial recognition is one of those tools. The events of this month have made it abundantly clear that facial recognition is here to stay.

On January 6, hundreds of people ransacked the U.S. Capitol. Americans understood that every available tool should be used to identify the insurrectionists.

Clearview AI was one of those tools; in a moment of unmitigated chaos, law enforcers saw it as a product that they could rely on. The company saw a 26% percent surge in usage after the riot.

This technology should also be leveraged to protect victims of Internet-induced violence, harassment, and fraud. In particular, law enforcement must become more proactive in investigating child sexual-abuse material (CSAM). The scale of the problem cannot be overstated. In 2019, more than 70 million images and videos were reported to the National Center for Missing and Exploited Children (NCMEC). The images exposed horrific instances of abuse, including rape and torture of infants, with the underlying acts of abuse depicting production, distribution, and possession. CSAM can remain online for decades, compounding a trauma to an unimaginable level.

Big Tech, with its encryption, live-streaming, and cloud-sharing options, has exacerbated the crisis. According to news reports, Facebook Messenger was responsible for 12 million of the 18.4 million reports of CSAM – meaning that the social-media giant is profiting from CSAM.

I first learned about Clearview AI last year, when the company asked me to conduct an independent review of its technology. I concluded that Clearview AI offers unprecedented capabilities to identify stalkers, rapists, child abusers, and other online predators and could discover previously unidentified child victims depicted in child sexual-abuse material proliferating online. I also realized that Clearview could potentially identify serial rapists – including those with outstanding restraining orders and already registered as sex offenders – who use dating apps as their personal concierge.

REAL CLEAR POLITICS

Facial Recognition's Vital Role in Protecting Victims

As the founder of a victims' rights law firm focused on technology-facilitated sex crimes, I'm in the business of protecting my clients. That means making use of every tool available to keep them safe. Facial recognition is one of those tools. The events of this month have made it abundantly clear that facial recognition is here to stay.

On January 6, hundreds of people ransacked the U.S. Capitol. Americans understood that every available tool should be used to identify the insurrectionists.

Clearview AI was one of those tools; in a moment of unmitigated chaos, law enforcers saw it as a product that they could rely on. The company saw a 26% percent surge in usage after the riot.

This technology should also be leveraged to protect victims of Internet-induced violence, harassment, and fraud. In particular, law enforcement must become more proactive in investigating child sexual-abuse material (CSAM). The scale of the problem cannot be overstated. In 2019, more than 70 million images and videos were reported to the National Center for Missing and Exploited Children (NCMEC). The images exposed horrific instances of abuse, including rape and torture of infants, with the underlying acts of abuse depicting production, distribution, and possession. CSAM can remain online for decades, compounding a trauma to an unimaginable level.

Big Tech, with its encryption, live-streaming, and cloud-sharing options, has exacerbated the crisis. According to news reports, Facebook Messenger was responsible for 12 million of the 18.4 million reports of CSAM – meaning that the social-media giant is profiting from CSAM.

I first learned about Clearview AI last year, when the company asked me to conduct an independent review of its technology. I concluded that Clearview AI offers unprecedented capabilities to identify stalkers, rapists, child abusers, and other online predators and could discover previously unidentified child victims depicted in child sexual-abuse material proliferating online. I also realized that Clearview could potentially identify serial rapists – including those with outstanding restraining orders and already registered as sex offenders – who use dating apps as their personal concierge.

Facial-recognition technology is inherently controversial, and Clearview AI has gone through a maturation process as it has strengthened its code of conduct and user-accountability protocols. Critics are right to be concerned about privacy. However, unlike Big Tech, Clearview AI has carefully adopted best practices to ensure that only authorized law enforcers — investigating actual cases — have access to its powerful technology. Like all technology, it can be abused, but bad actors are flagged, reported, and permanently banned, even running the risk of losing their jobs.

Victims of CSAM deserve to know that they were targets of what many consider society's most vile and heinous crime. However, some child victims of sexual abuse may not realize that they were filmed or know that images of their sexual abuse are in circulation. Victims of CSAM have a federally mandated right to be notified when images depicting them are discovered during a criminal investigation. These victims deserve to know that they're on display online, and that they're eligible for special

federal funds to help them.

Clearview AI's technology may be the scalable solution to this confounding problem.

I have worked with hundreds of adult victims of nonconsensual pornography. Intimate images and videos of victims are sometimes disseminated for years before the depicted individuals discover that their privacy had been stolen from them. Clearview AI offers the possibility of rapid notification for these victims. Law enforcers could be empowered to notify victims of other websites that contain their intimate images and videos so that they can effectuate removal.

Law enforcement agencies across the country are already using technologies such as Clearview AI to apprehend child predators, drug traffickers, financial fraud rings, and murderers. These agencies want and need the technology.

All technology has the power to be used for good or for evil. As we say at my firm, it's not the technology that's bad – it's the potential misuse. Civil libertarian organizations like the ACLU have long been hostile toward laws that could protect victims of CSAM and revenge porn, acting instead in favor of untrammeled Big Tech and an unfettered Internet. It's inconsistent of these organizations to single out facial-recognition for scrutiny when they celebrate far more intrusive technologies. Rather than attack facial recognition, they should help develop a thoughtful regulatory plan that enables law enforcement to scale up its efforts to help victims. Facial recognition can and should be harnessed to make the world a safer place.

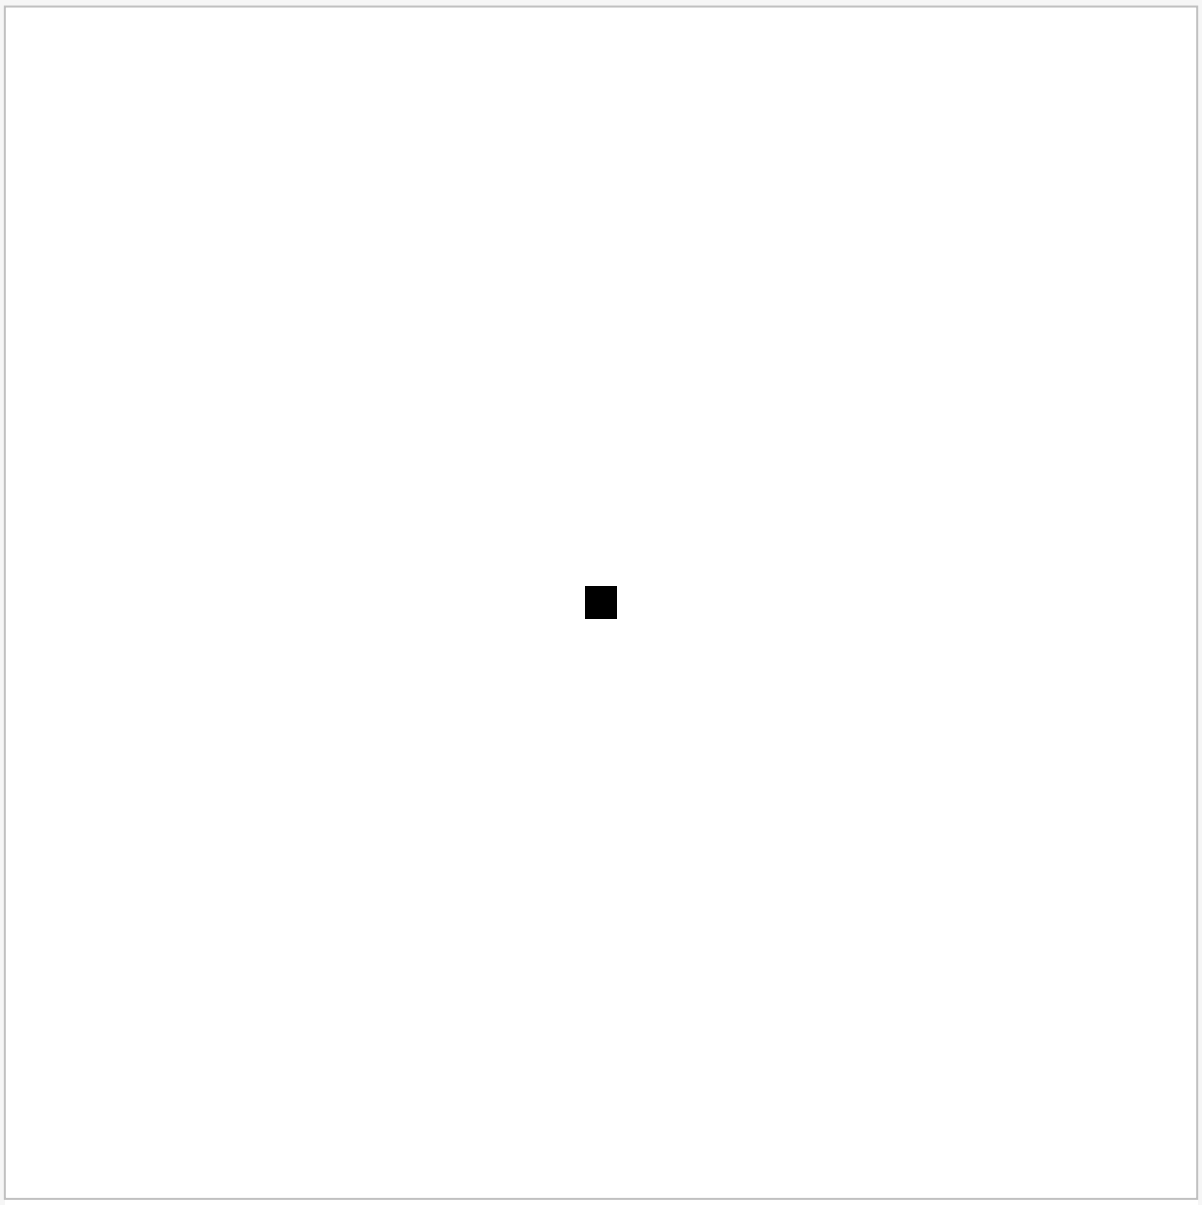
Subject: [EXTERNAL]Op-Ed: The Promise and Perils of Facial Recognition
Date: Thursday, January 21, 2021 2:01:16 PM



THE WALL STREET JOURNAL

The Promise and Peril of Facial Recognition

Agencies are using the technology to identify the Capitol rioters.

Federal, state and local law-enforcement agencies are using facial-recognition technology to identify the members of the mob that assaulted the U.S. Capitol last week.

Elsewhere, facial recognition and artificial intelligence are increasingly being used

for nefarious purposes—including by China to persecute minorities and to identify Hong Kong dissidents.

We represent Clearview AI, the U.S. facial-recognition startup that became controversial a year ago when its existence came to light in the media. Clearview AI maintains a database of billions of publicly posted photographs that have been lawfully downloaded from the Internet, where users posted them on public websites, including social media. Clearview AI downloads photographs from the public internet that are available to any user from any computer around the world without the consent of the person photographed.

Licensed clients of Clearview AI—which are limited to law-enforcement agencies—can run a photo of an unidentified person through Clearview AI's database for after-the-crime investigations. Clearview AI uses algorithms to create facial vectors, or "faceprints," of the photo's subject.

The question for policy makers is how to regulate this technology to allow its legitimate use and prevent abuse. A patchwork of state and local laws seek to restrict or even prohibit the use of biometrics, including faceprints. These are of dubious constitutionality, since the Supreme Court has made plain that "the creation and dissemination of information are speech within the meaning of the First Amendment."

In the absence of federal regulation, Clearview AI has taken solid steps to self-regulate. It currently makes its app available to law enforcement only. Without the app, you cannot access the database. This year, Clearview AI implemented a comprehensive audit function to require that every search done by law enforcement is annotated with a crime type and case number.

For its part, Clearview AI would welcome federal regulation that would unravel the tangle of sometimes inconsistent and unconstitutional state and local laws. Congress should authorize, with proper safeguards, use by law enforcement and national-security authorities. This would help to identify perpetrators of crime as well as victims of abuse, and to apprehend terrorists, both foreign and domestic. Such investigative use should be conducted on an after-the-crime basis, unlike in China, where facial-recognition is used for real-time surveillance by the state.

Responsible private companies, such as banking and financial institutions, should be permitted to access facial-recognition technologies to prevent identity theft and otherwise deter criminality.

Facial-recognition technology is here to stay. China demonstrates its dangers, but its use after the Capitol insurrection shows its promise.

THE WALL STREET JOURNAL

The Promise and Peril of Facial Recognition

Agencies are using the technology to identify the Capitol rioters.

Federal, state and local law-enforcement agencies are using facial-recognition technology to identify the members of the mob that assaulted the U.S. Capitol last week.

Elsewhere, facial recognition and artificial intelligence are increasingly being used

for nefarious purposes—including by China to persecute minorities and to identify Hong Kong dissidents.

We represent Clearview AI, the U.S. facial-recognition startup that became controversial a year ago when its existence came to light in the media. Clearview AI maintains a database of billions of publicly posted photographs that have been lawfully downloaded from the Internet, where users posted them on public websites, including social media. Clearview AI downloads photographs from the public internet that are available to any user from any computer around the world without the consent of the person photographed.

Licensed clients of Clearview AI—which are limited to law-enforcement agencies—can run a photo of an unidentified person through Clearview AI's database for after-the-crime investigations. Clearview AI uses algorithms to create facial vectors, or "faceprints," of the photo's subject.

The question for policy makers is how to regulate this technology to allow its legitimate use and prevent abuse. A patchwork of state and local laws seek to restrict or even prohibit the use of biometrics, including faceprints. These are of dubious constitutionality, since the Supreme Court has made plain that "the creation and dissemination of information are speech within the meaning of the First Amendment."

Elsewhere, facial recognition and artificial intelligence are increasingly being used

for nefarious purposes—including by China to persecute minorities and to identify Hong Kong dissidents.

We represent Clearview AI, the U.S. facial-recognition startup that became controversial a year ago when its existence came to light in the media. Clearview AI maintains a database of billions of publicly posted photographs that have been lawfully downloaded from the Internet, where users posted them on public websites, including social media. Clearview AI downloads photographs from the public internet that are available to any user from any computer around the world without the consent of the person photographed.

Licensed clients of Clearview AI—which are limited to law-enforcement agencies—can run a photo of an unidentified person through Clearview AI's database for after-the-crime investigations. Clearview AI uses algorithms to create facial vectors, or "faceprints," of the photo's subject.

The question for policy makers is how to regulate this technology to allow its legitimate use and prevent abuse. A patchwork of state and local laws seek to restrict or even prohibit the use of biometrics, including faceprints. These are of dubious constitutionality, since the Supreme Court has made plain that "the creation and dissemination of information are speech within the meaning of the First Amendment."

In the absence of federal regulation, Clearview AI has taken solid steps to self-regulate. It currently makes its app available to law enforcement only. Without the app, you cannot access the database. This year, Clearview AI implemented a comprehensive audit function to require that every search done by law enforcement is annotated with a crime type and case number.

For its part, Clearview AI would welcome federal regulation that would unravel the tangle of sometimes inconsistent and unconstitutional state and local laws. Congress should authorize, with proper safeguards, use by law enforcement and national-security authorities. This would help to identify perpetrators of crime as well as victims of abuse, and to apprehend terrorists, both foreign and domestic. Such investigative use should be conducted on an after-the-crime basis, unlike in China, where facial-recognition is used for real-time surveillance by the state.

Responsible private companies, such as banking and financial institutions, should be permitted to access facial-recognition technologies to prevent identity theft and otherwise deter criminality.

Facial-recognition technology is here to stay. China demonstrates its dangers, but its use after the Capitol insurrection shows its promise.

THE WALL STREET JOURNAL

The Promise and Peril of Facial Recognition

Agencies are using the technology to identify the Capitol rioters.

Federal, state and local law-enforcement agencies are using facial-recognition technology to identify the members of the mob that assaulted the U.S. Capitol last week.

Elsewhere, facial recognition and artificial intelligence are increasingly being used

for nefarious purposes—including by China to persecute minorities and to identify Hong Kong dissidents.

We represent Clearview AI, the U.S. facial-recognition startup that became controversial a year ago when its existence came to light in the media. Clearview AI maintains a database of billions of publicly posted photographs that have been lawfully downloaded from the Internet, where users posted them on public websites, including social media. Clearview AI downloads photographs from the public internet that are available to any user from any computer around the world without the consent of the person photographed.

Licensed clients of Clearview AI—which are limited to law-enforcement agencies—can run a photo of an unidentified person through Clearview AI's database for after-the-crime investigations. Clearview AI uses algorithms to create facial vectors, or "faceprints," of the photo's subject.

The question for policy makers is how to regulate this technology to allow its legitimate use and prevent abuse. A patchwork of state and local laws seek to restrict or even prohibit the use of biometrics, including faceprints. These are of dubious constitutionality, since the Supreme Court has made plain that "the creation and dissemination of information are speech within the meaning of the First Amendment."

In the absence of federal regulation, Clearview AI has taken solid steps to self-regulate. It currently makes its app available to law enforcement only. Without the app, you cannot access the database. This year, Clearview AI implemented a comprehensive audit function to require that every search done by law enforcement is annotated with a crime type and case number.

For its part, Clearview AI would welcome federal regulation that would unravel the tangle of sometimes inconsistent and unconstitutional state and local laws. Congress should authorize, with proper safeguards, use by law enforcement and national-security authorities. This would help to identify perpetrators of crime as well as victims of abuse, and to apprehend terrorists, both foreign and domestic. Such investigative use should be conducted on an after-the-crime basis, unlike in China, where facial-recognition is used for real-time surveillance by the state.

Responsible private companies, such as banking and financial institutions, should be permitted to access facial-recognition technologies to prevent identity theft and otherwise deter criminality.

Facial-recognition technology is here to stay. China demonstrates its dangers, but its use after the Capitol insurrection shows its promise.

Subject: [EXTERNAL]Op-Ed: The Face of Hysteria: New York must Preserve Facial Recognition as a Tool for Law Enforcement
Date: Wednesday, February 17, 2021 11:29:48 AM

NEW YORK DAILY NEWS

The Face of Hysteria

New York Must Preserve Facial Recognition as a Tool for Law Enforcement

The Minneapolis City Council, joining Boston, Los Angeles, Portland, Oakland and other localities, has banned its police department from using facial recognition technology — which would mean, when witnesses or security cameras there capture people red-handed, cops can no longer run those images through computer software to see if they get a match to mugshot or driver's license databases.

Activists and state Sen. Brad Holyman are pressing for a similar prohibition here in New York. This is a terrible idea. Like any innovation, facial recognition has its risks, but it's many times better than the alternative.

Before cameras often captured crimes in progress, the crucial evidence in many cases came not from video images but from eyewitnesses. The human memory being profoundly flawed, those witnesses chronically lie. They mislead. They contribute, says The Innocence Project, to "approximately 69% of the more than 375 wrongful convictions in the United States overturned by post-conviction DNA evidence."

Hoylman and cosponsors could just as well rename their bill the Eyewitness Identification Reliance Act.

Meanwhile, it is comical to hear facial recognition opponents claim that the practice moves the U.S. ever closer to an Orwellian, total-surveillance society — while defending the use of fingerprint scans, which match people using the tiny traces their hands leave behind, and forensic DNA analysis, which gathers evidence from skin cells and dried blood droplets.

Nor does facial recognition just help cops catch perpetrators, as it did with many individuals involved in the Jan. 6 attack on the Capitol. It exonerates people; it helps identify people with dementia and children caught in sex trafficking webs.

It is true that this tech is less reliable when used to identify Black and Brown faces, a serious problem being addressed. It's also true that some face recognition systems draw from a vast trove of photographs, not merely government databases.

Give cops clearer rules so that they don't abuse a powerful technology? Okay. Prevent them from using subway platform or bodega cameras from tracking down assailants? Hell no.

NEW YORK DAILY NEWS

The Face of Hysteria

New York Must Preserve Facial Recognition as a Tool for Law Enforcement

The Minneapolis City Council, joining Boston, Los Angeles, Portland, Oakland and other localities, has banned its police department from using facial recognition technology — which would mean, when witnesses or security cameras there capture people red-handed, cops can no longer run those images through computer software to see if they get a match to mugshot or driver's license databases.

Activists and state Sen. Brad Holyman are pressing for a similar prohibition here in New York. This is a terrible idea. Like any innovation, facial recognition has its risks, but it's many times better than the alternative.

Before cameras often captured crimes in progress, the crucial evidence in many cases came not from video images but from eyewitnesses. The human memory being profoundly flawed, those witnesses chronically lie. They mislead. They contribute, says The Innocence Project, to "approximately 69% of the more than 375 wrongful convictions in the United States overturned by post-conviction DNA evidence."

Hoylman and cosponsors could just as well rename their bill the Eyewitness Identification Reliance Act.

Meanwhile, it is comical to hear facial recognition opponents claim that the practice moves the U.S. ever closer to an Orwellian, total-surveillance society — while defending the use of fingerprint scans, which match people using the tiny traces their hands leave behind, and forensic DNA analysis, which gathers evidence from skin cells and dried blood droplets.

Nor does facial recognition just help cops catch perpetrators, as it did with many individuals involved in the Jan. 6 attack on the Capitol. It exonerates people; it helps identify people with dementia and children caught in sex trafficking webs.

It is true that this tech is less reliable when used to identify Black and Brown faces, a serious problem being addressed. It's also true that some face recognition systems draw from a vast trove of photographs, not merely government databases.

Give cops clearer rules so that they don't abuse a powerful technology? Okay. Prevent them from using subway platform or bodega cameras from tracking down assailants? Hell no.

NEW YORK DAILY NEWS

The Face of Hysteria

New York Must Preserve Facial Recognition as a Tool for Law Enforcement

The Minneapolis City Council, joining Boston, Los Angeles, Portland, Oakland and other localities, has banned its police department from using facial recognition technology — which would mean, when witnesses or security cameras there capture people red-handed, cops can no longer run those images through computer software to see if they get a match to mugshot or driver's license databases.

Activists and state Sen. Brad Holyman are pressing for a similar prohibition here in New York. This is a terrible idea. Like any innovation, facial recognition has its risks, but it's many times better than the alternative.

Before cameras often captured crimes in progress, the crucial evidence in many cases came not from video images but from eyewitnesses. The human memory being profoundly flawed, those witnesses chronically lie. They mislead. They contribute, says The Innocence Project, to "approximately 69% of the more than 375 wrongful convictions in the United States overturned by post-conviction DNA evidence."

Hoylman and cosponsors could just as well rename their bill the Eyewitness Identification Reliance Act.

Meanwhile, it is comical to hear facial recognition opponents claim that the practice moves the U.S. ever closer to an Orwellian, total-surveillance society — while defending the use of fingerprint scans, which match people using the tiny traces their hands leave behind, and forensic DNA analysis, which gathers evidence from skin cells and dried blood droplets.

Nor does facial recognition just help cops catch perpetrators, as it did with many individuals involved in the Jan. 6 attack on the Capitol. It exonerates people; it helps identify people with dementia and children caught in sex trafficking webs.

It is true that this tech is less reliable when used to identify Black and Brown faces, a serious problem being addressed. It's also true that some face recognition systems draw from a vast trove of photographs, not merely government databases.

Give cops clearer rules so that they don't abuse a powerful technology? Okay. Prevent them from using subway platform or bodega cameras from tracking down assailants? Hell no.

Subject: [EXTERNAL]Op-Ed: The Face of Hysteria: New York must Preserve Facial Recognition as a Tool for Law Enforcement
Date: Wednesday, February 17, 2021 11:30:31 AM

NEW YORK DAILY NEWS

The Face of Hysteria

New York Must Preserve Facial Recognition as a Tool for Law Enforcement

The Minneapolis City Council, joining Boston, Los Angeles, Portland, Oakland and other localities, has banned its police department from using facial recognition technology — which would mean, when witnesses or security cameras there capture people red-handed, cops can no longer run those images through computer software to see if they get a match to mugshot or driver's license databases.

Activists and state Sen. Brad Holyman are pressing for a similar prohibition here in New York. This is a terrible idea. Like any innovation, facial recognition has its risks, but it's many times better than the alternative.

Before cameras often captured crimes in progress, the crucial evidence in many cases came not from video images but from eyewitnesses. The human memory being profoundly flawed, those witnesses chronically lie. They mislead. They contribute, says The Innocence Project, to "approximately 69% of the more than 375 wrongful convictions in the United States overturned by post-conviction DNA evidence."

Hoylman and cosponsors could just as well rename their bill the Eyewitness Identification Reliance Act.

Meanwhile, it is comical to hear facial recognition opponents claim that the practice moves the U.S. ever closer to an Orwellian, total-surveillance society — while defending the use of fingerprint scans, which match people using the tiny traces their hands leave behind, and forensic DNA analysis, which gathers evidence from skin cells and dried blood droplets.

Nor does facial recognition just help cops catch perpetrators, as it did with many individuals involved in the Jan. 6 attack on the Capitol. It exonerates people; it helps identify people with dementia and children caught in sex trafficking webs.

It is true that this tech is less reliable when used to identify Black and Brown faces, a serious problem being addressed. It's also true that some face recognition systems draw from a vast trove of photographs, not merely government databases.

Give cops clearer rules so that they don't abuse a powerful technology? Okay. Prevent them from using subway platform or bodega cameras from tracking down assailants? Hell no.

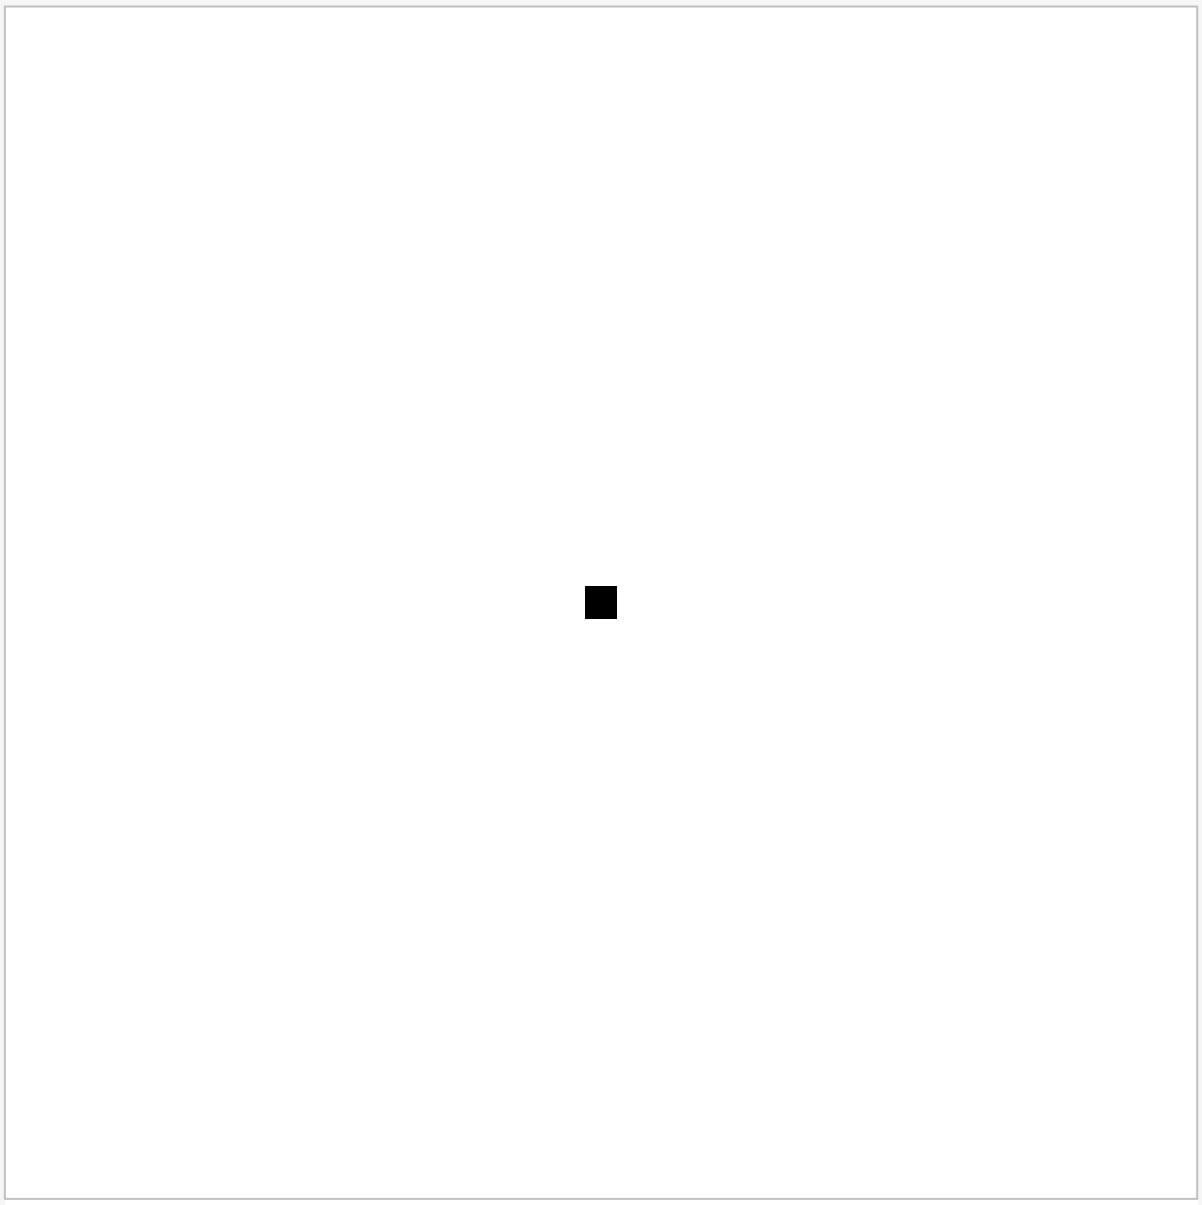
Subject: [EXTERNAL]Our Public Faces: Security, Civil Liberties,and Facial Recognition Technology
Date: Tuesday, February 23, 2021 10:59:55 AM



THE BOSTON GLOBE

Our Public Faces: Security, Civil Liberties, and Facial Recognition Technology

Facial recognition is a double-edged sword with the promise of taking criminals of the street, but with the risk of abuse, misuse, and mistakes.

After the Jan. 6 insurrection at the Capitol, the seditionist mob faded into the streets of Washington. Few were arrested on site, one of the many security failures that day. Yet scores of attackers were identified, located, and arrested in the days that followed, all

across the country. In addition to their own social media posts, two tools that denied the insurrectionists the impunity they sought were security cameras and facial recognition software. Those two tools may help protect our democracy by putting its enemies behind bars, but those same tools are being used elsewhere to suppress those seeking democracy.

While many incriminated themselves by publicly posting their own images taken while breaking the law, some were identified in images that others took and posted on social media or in images taken by surveillance cameras. Linking photos with a name took place through crowd-sourcing and software that compared faces with those of known individuals in databases such as driver's licenses, passports, military IDs, and photos downloaded from publicly available social media accounts. Had the insurrectionists followed public health recommendations to prevent the spread of COVID-19 and worn masks, that task would have been more difficult. Yet most of the mob were what we in national security circles politely call "low information" citizens, those who demonstrate little regard for the health and well-being of others.

In Hong Kong and Moscow, however, it is pro-democracy demonstrators who have been wearing masks precisely for the purpose of thwarting their identification by security services. In China, Russia, and other police states around the world, the technology used in the United States to preserve democracy and reduce crime has increasingly been used to arrest peaceful protestors and advocates of democracy and human rights.

Even in the United States, facial recognition software has in a few cases resulted in an innocent person being charged and even jailed. And we know that this technology can be unreliable and discriminate against Black people. So the use of facial recognition software is clearly a double-edged sword, with the promise of taking criminals off the street but also with the risk of abuse, misuse, and mistakes. Law enforcement using our images taken without our consent can also infringe on our notions of privacy.

In many respects, this duality of potential for good and bad in a security technology is not new. Law enforcement labs have also made mistakes with fingerprints and DNA, but standards and certification have significantly reduced the error rate. Courts have long established that when we leave our fingerprints or DNA behind in public places — or at crime scenes — they can be used by police for identification purposes when a crime is being investigated. Without the use of fingerprints and DNA for identification of criminals, many more murders and rapes would never result in convictions and many perpetrators would attack additional victims.

With cameras and facial recognition, standards and legal precedents are not yet fully developed. In their absence, public acceptance of facial recognition is not yet where it is for fingerprints or DNA analysis. Facial recognition technology is coming at us fast and

holds out the prospect, beyond law enforcement, of quicker and easier access controls in buildings, the replacement of airline boarding passes, preventing fraud and identity theft in personal bank accounts, and maybe even bringing about the long- sought end of computer passwords.

What is needed for greater acceptance, however, is a trusted third party to audit facial recognition software against an established, transparent standard to ensure that each company that makes such software reliably and accurately establishes the identity of a person regardless of their race, gender, or skin color. Other national standards might set the conditions necessary for use of an image for identification, such as the lighting, angle of observation, and number of features clearly visible. It would also be progress if courts created generally accepted case law or legislatures wrote statutes on when and for what purpose facial recognition may be used in investigations and trials. In this country, no one should be tracked by law enforcement using facial recognition, mobile phones, or any other methods unless there are well-established reasons to believe that a crime had been or was about to be committed.

Having clear, transparent, and equitable laws and standards on the emerging role of facial recognition software in law enforcement would enable the United States to credibly address the abuse of surveillance cameras and facial recognition software in authoritarian states. We should want emerging technology to help us preserve, protect, and defend democracy where we still have it and not be used as a tool of oppression in nations still under the yoke of authoritarian rulers.

In Hong Kong and Moscow, however, it is pro-democracy demonstrators who have been wearing masks precisely for the purpose of thwarting their identification by security services. In China, Russia, and other police states around the world, the technology used in the United States to preserve democracy and reduce crime has increasingly been used to arrest peaceful protestors and advocates of democracy and human rights.

Even in the United States, facial recognition software has in a few cases resulted in an innocent person being charged and even jailed. And we know that this technology can be unreliable and discriminate against Black people. So the use of facial recognition software is clearly a double-edged sword, with the promise of taking criminals off the street but also with the risk of abuse, misuse, and mistakes. Law enforcement using our images taken without our consent can also infringe on our notions of privacy.

In many respects, this duality of potential for good and bad in a security technology is not new. Law enforcement labs have also made mistakes with fingerprints and DNA, but standards and certification have significantly reduced the error rate. Courts have long established that when we leave our fingerprints or DNA behind in public places — or at crime scenes — they can be used by police for identification purposes when a crime is being investigated. Without the use of fingerprints and DNA for identification of criminals, many more murders and rapes would never result in convictions and many perpetrators would attack additional victims.

With cameras and facial recognition, standards and legal precedents are not yet fully developed. In their absence, public acceptance of facial recognition is not yet where it is for fingerprints or DNA analysis. Facial recognition technology is coming at us fast and

holds out the prospect, beyond law enforcement, of quicker and easier access controls in buildings, the replacement of airline boarding passes, preventing fraud and identity theft in personal bank accounts, and maybe even bringing about the long- sought end of computer passwords.

What is needed for greater acceptance, however, is a trusted third party to audit facial recognition software against an established, transparent standard to ensure that each company that makes such software reliably and accurately establishes the identity of a person regardless of their race, gender, or skin color. Other national standards might set the conditions necessary for use of an image for identification, such as the lighting, angle of observation, and number of features clearly visible. It would also be progress if courts created generally accepted case law or legislatures wrote statutes on when and for what purpose facial recognition may be used in investigations and trials. In this country, no one should be tracked by law enforcement using facial recognition, mobile phones, or any other methods unless there are well-established reasons to believe that a crime had been or was about to be committed.

Having clear, transparent, and equitable laws and standards on the emerging role of facial recognition software in law enforcement would enable the United States to credibly address the abuse of surveillance cameras and facial recognition software in authoritarian states. We should want emerging technology to help us preserve, protect, and defend democracy where we still have it and not be used as a tool of oppression in nations still under the yoke of authoritarian rulers.

Our Public Faces: Security, Civil Liberties, and Facial Recognition Technology

Facial recognition is a double-edged sword with the promise of taking criminals of the street, but with the risk of abuse, misuse, and mistakes.

After the Jan. 6 insurrection at the Capitol, the seditionist mob faded into the streets of Washington. Few were arrested on site, one of the many security failures that day. Yet scores of attackers were identified, located, and arrested in the days that followed, all

across the country. In addition to their own social media posts, two tools that denied the insurrectionists the impunity they sought were security cameras and facial recognition software. Those two tools may help protect our democracy by putting its enemies behind bars, but those same tools are being used elsewhere to suppress those seeking democracy.

While many incriminated themselves by publicly posting their own images taken while breaking the law, some were identified in images that others took and posted on social media or in images taken by surveillance cameras. Linking photos with a name took place through crowd-sourcing and software that compared faces with those of known individuals in databases such as driver's licenses, passports, military IDs, and photos downloaded from publicly available social media accounts. Had the insurrectionists followed public health recommendations to prevent the spread of COVID-19 and worn masks, that task would have been more difficult. Yet most of the mob were what we in national security circles politely call "low information" citizens, those who demonstrate little regard for the health and well-being of others.

In Hong Kong and Moscow, however, it is pro-democracy demonstrators who have been wearing masks precisely for the purpose of thwarting their identification by security services. In China, Russia, and other police states around the world, the technology used in the United States to preserve democracy and reduce crime has increasingly been used to arrest peaceful protestors and advocates of democracy and human rights.

Our Public Faces: Security, Civil Liberties, and Facial Recognition Technology

Facial recognition is a double-edged sword with the promise of taking criminals of the street, but with the risk of abuse, misuse, and mistakes.

After the Jan. 6 insurrection at the Capitol, the seditionist mob faded into the streets of Washington. Few were arrested on site, one of the many security failures that day. Yet scores of attackers were identified, located, and arrested in the days that followed, all

across the country. In addition to their own social media posts, two tools that denied the insurrectionists the impunity they sought were security cameras and facial recognition software. Those two tools may help protect our democracy by putting its enemies behind bars, but those same tools are being used elsewhere to suppress those seeking democracy.

While many incriminated themselves by publicly posting their own images taken while breaking the law, some were identified in images that others took and posted on social media or in images taken by surveillance cameras. Linking photos with a name took place through crowd-sourcing and software that compared faces with those of known individuals in databases such as driver's licenses, passports, military IDs, and photos downloaded from publicly available social media accounts. Had the insurrectionists followed public health recommendations to prevent the spread of COVID-19 and worn masks, that task would have been more difficult. Yet most of the mob were what we in national security circles politely call "low information" citizens, those who demonstrate little regard for the health and well-being of others.

In Hong Kong and Moscow, however, it is pro-democracy demonstrators who have been wearing masks precisely for the purpose of thwarting their identification by security services. In China, Russia, and other police states around the world, the technology used in the United States to preserve democracy and reduce crime has increasingly been used to arrest peaceful protestors and advocates of democracy and human rights.

Even in the United States, facial recognition software has in a few cases resulted in an innocent person being charged and even jailed. And we know that this technology can be unreliable and discriminate against Black people. So the use of facial recognition software is clearly a double-edged sword, with the promise of taking criminals off the street but also with the risk of abuse, misuse, and mistakes. Law enforcement using our images taken without our consent can also infringe on our notions of privacy.

In many respects, this duality of potential for good and bad in a security technology is not new. Law enforcement labs have also made mistakes with fingerprints and DNA, but standards and certification have significantly reduced the error rate. Courts have long established that when we leave our fingerprints or DNA behind in public places — or at crime scenes — they can be used by police for identification purposes when a crime is being investigated. Without the use of fingerprints and DNA for identification of criminals, many more murders and rapes would never result in convictions and many perpetrators would attack additional victims.

With cameras and facial recognition, standards and legal precedents are not yet fully developed. In their absence, public acceptance of facial recognition is not yet where it is for fingerprints or DNA analysis. Facial recognition technology is coming at us fast and

holds out the prospect, beyond law enforcement, of quicker and easier access controls in buildings, the replacement of airline boarding passes, preventing fraud and identity theft in personal bank accounts, and maybe even bringing about the long- sought end of computer passwords.

What is needed for greater acceptance, however, is a trusted third party to audit facial recognition software against an established, transparent standard to ensure that each company that makes such software reliably and accurately establishes the identity of a person regardless of their race, gender, or skin color. Other national standards might set the conditions necessary for use of an image for identification, such as the lighting, angle of observation, and number of features clearly visible. It would also be progress if courts created generally accepted case law or legislatures wrote statutes on when and for what purpose facial recognition may be used in investigations and trials. In this country, no one should be tracked by law enforcement using facial recognition, mobile phones, or any other methods unless there are well-established reasons to believe that a crime had been or was about to be committed.

Having clear, transparent, and equitable laws and standards on the emerging role of facial recognition software in law enforcement would enable the United States to credibly address the abuse of surveillance cameras and facial recognition software in authoritarian states. We should want emerging technology to help us preserve, protect, and defend democracy where we still have it and not be used as a tool of oppression in nations still under the yoke of authoritarian rulers.

Our Public Faces: Security, Civil Liberties, and Facial Recognition Technology

Facial recognition is a double-edged sword with the promise of taking criminals of the street, but with the risk of abuse, misuse, and mistakes.

After the Jan. 6 insurrection at the Capitol, the seditionist mob faded into the streets of Washington. Few were arrested on site, one of the many security failures that day. Yet scores of attackers were identified, located, and arrested in the days that followed, all

across the country. In addition to their own social media posts, two tools that denied the insurrectionists the impunity they sought were security cameras and facial recognition software. Those two tools may help protect our democracy by putting its enemies behind bars, but those same tools are being used elsewhere to suppress those seeking democracy.

While many incriminated themselves by publicly posting their own images taken while breaking the law, some were identified in images that others took and posted on social media or in images taken by surveillance cameras. Linking photos with a name took place through crowd-sourcing and software that compared faces with those of known individuals in databases such as driver's licenses, passports, military IDs, and photos downloaded from publicly available social media accounts. Had the insurrectionists followed public health recommendations to prevent the spread of COVID-19 and worn masks, that task would have been more difficult. Yet most of the mob were what we in national security circles politely call "low information" citizens, those who demonstrate little regard for the health and well-being of others.

In Hong Kong and Moscow, however, it is pro-democracy demonstrators who have been wearing masks precisely for the purpose of thwarting their identification by security services. In China, Russia, and other police states around the world, the technology used in the United States to preserve democracy and reduce crime has increasingly been used to arrest peaceful protestors and advocates of democracy and human rights.

Even in the United States, facial recognition software has in a few cases resulted in an innocent person being charged and even jailed. And we know that this technology can be unreliable and discriminate against Black people. So the use of facial recognition software is clearly a double-edged sword, with the promise of taking criminals off the street but also with the risk of abuse, misuse, and mistakes. Law enforcement using our images taken without our consent can also infringe on our notions of privacy.

In many respects, this duality of potential for good and bad in a security technology is not new. Law enforcement labs have also made mistakes with fingerprints and DNA, but standards and certification have significantly reduced the error rate. Courts have long established that when we leave our fingerprints or DNA behind in public places — or at crime scenes — they can be used by police for identification purposes when a crime is being investigated. Without the use of fingerprints and DNA for identification of criminals, many more murders and rapes would never result in convictions and many perpetrators would attack additional victims.

With cameras and facial recognition, standards and legal precedents are not yet fully developed. In their absence, public acceptance of facial recognition is not yet where it is for fingerprints or DNA analysis. Facial recognition technology is coming at us fast and

holds out the prospect, beyond law enforcement, of quicker and easier access controls in buildings, the replacement of airline boarding passes, preventing fraud and identity theft in personal bank accounts, and maybe even bringing about the long- sought end of computer passwords.

What is needed for greater acceptance, however, is a trusted third party to audit facial recognition software against an established, transparent standard to ensure that each company that makes such software reliably and accurately establishes the identity of a person regardless of their race, gender, or skin color. Other national standards might set the conditions necessary for use of an image for identification, such as the lighting, angle of observation, and number of features clearly visible. It would also be progress if courts created generally accepted case law or legislatures wrote statutes on when and for what purpose facial recognition may be used in investigations and trials. In this country, no one should be tracked by law enforcement using facial recognition, mobile phones, or any other methods unless there are well-established reasons to believe that a crime had been or was about to be committed.

Having clear, transparent, and equitable laws and standards on the emerging role of facial recognition software in law enforcement would enable the United States to credibly address the abuse of surveillance cameras and facial recognition software in authoritarian states. We should want emerging technology to help us preserve, protect, and defend democracy where we still have it and not be used as a tool of oppression in nations still under the yoke of authoritarian rulers.

Our Public Faces: Security, Civil Liberties, and Facial Recognition Technology

Facial recognition is a double-edged sword with the promise of taking criminals of the street, but with the risk of abuse, misuse, and mistakes.

After the Jan. 6 insurrection at the Capitol, the seditionist mob faded into the streets of Washington. Few were arrested on site, one of the many security failures that day. Yet scores of attackers were identified, located, and arrested in the days that followed, all

across the country. In addition to their own social media posts, two tools that denied the insurrectionists the impunity they sought were security cameras and facial recognition software. Those two tools may help protect our democracy by putting its enemies behind bars, but those same tools are being used elsewhere to suppress those seeking democracy.

While many incriminated themselves by publicly posting their own images taken while breaking the law, some were identified in images that others took and posted on social media or in images taken by surveillance cameras. Linking photos with a name took place through crowd-sourcing and software that compared faces with those of known individuals in databases such as driver's licenses, passports, military IDs, and photos downloaded from publicly available social media accounts. Had the insurrectionists followed public health recommendations to prevent the spread of COVID-19 and worn masks, that task would have been more difficult. Yet most of the mob were what we in national security circles politely call "low information" citizens, those who demonstrate little regard for the health and well-being of others.

In Hong Kong and Moscow, however, it is pro-democracy demonstrators who have been wearing masks precisely for the purpose of thwarting their identification by security services. In China, Russia, and other police states around the world, the technology used in the United States to preserve democracy and reduce crime has increasingly been used to arrest peaceful protestors and advocates of democracy and human rights.

Even in the United States, facial recognition software has in a few cases resulted in an innocent person being charged and even jailed. And we know that this technology can be unreliable and discriminate against Black people. So the use of facial recognition software is clearly a double-edged sword, with the promise of taking criminals off the street but also with the risk of abuse, misuse, and mistakes. Law enforcement using our images taken without our consent can also infringe on our notions of privacy.

In many respects, this duality of potential for good and bad in a security technology is not new. Law enforcement labs have also made mistakes with fingerprints and DNA, but standards and certification have significantly reduced the error rate. Courts have long established that when we leave our fingerprints or DNA behind in public places — or at crime scenes — they can be used by police for identification purposes when a crime is being investigated. Without the use of fingerprints and DNA for identification of criminals, many more murders and rapes would never result in convictions and many perpetrators would attack additional victims.

With cameras and facial recognition, standards and legal precedents are not yet fully developed. In their absence, public acceptance of facial recognition is not yet where it is for fingerprints or DNA analysis. Facial recognition technology is coming at us fast and

holds out the prospect, beyond law enforcement, of quicker and easier access controls in buildings, the replacement of airline boarding passes, preventing fraud and identity theft in personal bank accounts, and maybe even bringing about the long- sought end of computer passwords.

What is needed for greater acceptance, however, is a trusted third party to audit facial recognition software against an established, transparent standard to ensure that each company that makes such software reliably and accurately establishes the identity of a person regardless of their race, gender, or skin color. Other national standards might set the conditions necessary for use of an image for identification, such as the lighting, angle of observation, and number of features clearly visible. It would also be progress if courts created generally accepted case law or legislatures wrote statutes on when and for what purpose facial recognition may be used in investigations and trials. In this country, no one should be tracked by law enforcement using facial recognition, mobile phones, or any other methods unless there are well-established reasons to believe that a crime had been or was about to be committed.

Having clear, transparent, and equitable laws and standards on the emerging role of facial recognition software in law enforcement would enable the United States to credibly address the abuse of surveillance cameras and facial recognition software in authoritarian states. We should want emerging technology to help us preserve, protect, and defend democracy where we still have it and not be used as a tool of oppression in nations still under the yoke of authoritarian rulers.

THE BOSTON GLOBE

Our Public Faces: Security, Civil Liberties, and Facial Recognition Technology

Facial recognition is a double-edged sword with the promise of taking criminals of the street, but with the risk of abuse, misuse, and mistakes.

After the Jan. 6 insurrection at the Capitol, the seditionist mob faded into the streets of Washington. Few were arrested on site, one of the many security failures that day. Yet scores of attackers were identified, located, and arrested in the days that followed, all

across the country. In addition to their own social media posts, two tools that denied the insurrectionists the impunity they sought were security cameras and facial recognition software. Those two tools may help protect our democracy by putting its enemies behind bars, but those same tools are being used elsewhere to suppress those seeking democracy.

While many incriminated themselves by publicly posting their own images taken while breaking the law, some were identified in images that others took and posted on social media or in images taken by surveillance cameras. Linking photos with a name took place through crowd-sourcing and software that compared faces with those of known individuals in databases such as driver's licenses, passports, military IDs, and photos downloaded from publicly available social media accounts. Had the insurrectionists followed public health recommendations to prevent the spread of COVID-19 and worn masks, that task would have been more difficult. Yet most of the mob were what we in national security circles politely call "low information" citizens, those who demonstrate little regard for the health and well-being of others.

In Hong Kong and Moscow, however, it is pro-democracy demonstrators who have been wearing masks precisely for the purpose of thwarting their identification by security services. In China, Russia, and other police states around the world, the technology used in the United States to preserve democracy and reduce crime has increasingly been used to arrest peaceful protestors and advocates of democracy and human rights.

Our Public Faces: Security, Civil Liberties, and Facial Recognition Technology

Facial recognition is a double-edged sword with the promise of taking criminals of the street, but with the risk of abuse, misuse, and mistakes.

After the Jan. 6 insurrection at the Capitol, the seditionist mob faded into the streets of Washington. Few were arrested on site, one of the many security failures that day. Yet scores of attackers were identified, located, and arrested in the days that followed, all

across the country. In addition to their own social media posts, two tools that denied the insurrectionists the impunity they sought were security cameras and facial recognition software. Those two tools may help protect our democracy by putting its enemies behind bars, but those same tools are being used elsewhere to suppress those seeking democracy.

While many incriminated themselves by publicly posting their own images taken while breaking the law, some were identified in images that others took and posted on social media or in images taken by surveillance cameras. Linking photos with a name took place through crowd-sourcing and software that compared faces with those of known individuals in databases such as driver's licenses, passports, military IDs, and photos downloaded from publicly available social media accounts. Had the insurrectionists followed public health recommendations to prevent the spread of COVID-19 and worn masks, that task would have been more difficult. Yet most of the mob were what we in national security circles politely call "low information" citizens, those who demonstrate little regard for the health and well-being of others.

In Hong Kong and Moscow, however, it is pro-democracy demonstrators who have been wearing masks precisely for the purpose of thwarting their identification by security services. In China, Russia, and other police states around the world, the technology used in the United States to preserve democracy and reduce crime has increasingly been used to arrest peaceful protestors and advocates of democracy and human rights.

Even in the United States, facial recognition software has in a few cases resulted in an innocent person being charged and even jailed. And we know that this technology can be unreliable and discriminate against Black people. So the use of facial recognition software is clearly a double-edged sword, with the promise of taking criminals off the street but also with the risk of abuse, misuse, and mistakes. Law enforcement using our images taken without our consent can also infringe on our notions of privacy.

In many respects, this duality of potential for good and bad in a security technology is not new. Law enforcement labs have also made mistakes with fingerprints and DNA, but standards and certification have significantly reduced the error rate. Courts have long established that when we leave our fingerprints or DNA behind in public places — or at crime scenes — they can be used by police for identification purposes when a crime is being investigated. Without the use of fingerprints and DNA for identification of criminals, many more murders and rapes would never result in convictions and many perpetrators would attack additional victims.

With cameras and facial recognition, standards and legal precedents are not yet fully developed. In their absence, public acceptance of facial recognition is not yet where it is for fingerprints or DNA analysis. Facial recognition technology is coming at us fast and

holds out the prospect, beyond law enforcement, of quicker and easier access controls in buildings, the replacement of airline boarding passes, preventing fraud and identity theft in personal bank accounts, and maybe even bringing about the long- sought end of computer passwords.

What is needed for greater acceptance, however, is a trusted third party to audit facial recognition software against an established, transparent standard to ensure that each company that makes such software reliably and accurately establishes the identity of a person regardless of their race, gender, or skin color. Other national standards might set the conditions necessary for use of an image for identification, such as the lighting, angle of observation, and number of features clearly visible. It would also be progress if courts created generally accepted case law or legislatures wrote statutes on when and for what purpose facial recognition may be used in investigations and trials. In this country, no one should be tracked by law enforcement using facial recognition, mobile phones, or any other methods unless there are well-established reasons to believe that a crime had been or was about to be committed.

Having clear, transparent, and equitable laws and standards on the emerging role of facial recognition software in law enforcement would enable the United States to credibly address the abuse of surveillance cameras and facial recognition software in authoritarian states. We should want emerging technology to help us preserve, protect, and defend democracy where we still have it and not be used as a tool of oppression in nations still under the yoke of authoritarian rulers.

Our Public Faces: Security, Civil Liberties, and Facial Recognition Technology

Facial recognition is a double-edged sword with the promise of taking criminals of the street, but with the risk of abuse, misuse, and mistakes.

After the Jan. 6 insurrection at the Capitol, the seditionist mob faded into the streets of Washington. Few were arrested on site, one of the many security failures that day. Yet scores of attackers were identified, located, and arrested in the days that followed, all

across the country. In addition to their own social media posts, two tools that denied the insurrectionists the impunity they sought were security cameras and facial recognition software. Those two tools may help protect our democracy by putting its enemies behind bars, but those same tools are being used elsewhere to suppress those seeking democracy.

While many incriminated themselves by publicly posting their own images taken while breaking the law, some were identified in images that others took and posted on social media or in images taken by surveillance cameras. Linking photos with a name took place through crowd-sourcing and software that compared faces with those of known individuals in databases such as driver's licenses, passports, military IDs, and photos downloaded from publicly available social media accounts. Had the insurrectionists followed public health recommendations to prevent the spread of COVID-19 and worn masks, that task would have been more difficult. Yet most of the mob were what we in national security circles politely call "low information" citizens, those who demonstrate little regard for the health and well-being of others.

In Hong Kong and Moscow, however, it is pro-democracy demonstrators who have been wearing masks precisely for the purpose of thwarting their identification by security services. In China, Russia, and other police states around the world, the technology used in the United States to preserve democracy and reduce crime has increasingly been used to arrest peaceful protestors and advocates of democracy and human rights.

Even in the United States, facial recognition software has in a few cases resulted in an innocent person being charged and even jailed. And we know that this technology can be unreliable and discriminate against Black people. So the use of facial recognition software is clearly a double-edged sword, with the promise of taking criminals off the street but also with the risk of abuse, misuse, and mistakes. Law enforcement using our images taken without our consent can also infringe on our notions of privacy.

In many respects, this duality of potential for good and bad in a security technology is not new. Law enforcement labs have also made mistakes with fingerprints and DNA, but standards and certification have significantly reduced the error rate. Courts have long established that when we leave our fingerprints or DNA behind in public places — or at crime scenes — they can be used by police for identification purposes when a crime is being investigated. Without the use of fingerprints and DNA for identification of criminals, many more murders and rapes would never result in convictions and many perpetrators would attack additional victims.

With cameras and facial recognition, standards and legal precedents are not yet fully developed. In their absence, public acceptance of facial recognition is not yet where it is for fingerprints or DNA analysis. Facial recognition technology is coming at us fast and

holds out the prospect, beyond law enforcement, of quicker and easier access controls in buildings, the replacement of airline boarding passes, preventing fraud and identity theft in personal bank accounts, and maybe even bringing about the long- sought end of computer passwords.

What is needed for greater acceptance, however, is a trusted third party to audit facial recognition software against an established, transparent standard to ensure that each company that makes such software reliably and accurately establishes the identity of a person regardless of their race, gender, or skin color. Other national standards might set the conditions necessary for use of an image for identification, such as the lighting, angle of observation, and number of features clearly visible. It would also be progress if courts created generally accepted case law or legislatures wrote statutes on when and for what purpose facial recognition may be used in investigations and trials. In this country, no one should be tracked by law enforcement using facial recognition, mobile phones, or any other methods unless there are well-established reasons to believe that a crime had been or was about to be committed.

Having clear, transparent, and equitable laws and standards on the emerging role of facial recognition software in law enforcement would enable the United States to credibly address the abuse of surveillance cameras and facial recognition software in authoritarian states. We should want emerging technology to help us preserve, protect, and defend democracy where we still have it and not be used as a tool of oppression in nations still under the yoke of authoritarian rulers.

Josh,

Good morning! Can I check your availability for the zoom call? I will then compare that against the Chief's calendar. I've gone over the details with my Major and he wants to set it up with her. Does that sound ok for you guys? That way she can go ahead and get her questions answered up front.

Happy Friday Rachael – Hope you're well.

Following up on our call last week. Per our conversation, attached is short document outlining the proposed creative and desired law enforcement access for XG's upcoming investigative series in partnership with Clearview AI, to aid in your discussions with Chief Gina Hawkins. Let's set up a Zoom video conference call to discuss after you and your team have had a chance to read and digest.

Have a great weekend!

Thanks,

Good afternoon,

My apologies in the delay of my response. We've had several pressing issues arise lately. I'd be happy to talk with you all at your convenience.

Our department has been a part of various programs in the past and I was able to speak with my Chief recently about her interest in working with AMW. She is very interested in hearing more about your ideas.

Hi Hoan,

Thank you for the introduction. Rachael, it's a pleasure to meet you. We hope you're doing well and staying safe in this challenging time to be in law enforcement. As a company borne from and comprised of law enforcement, we appreciate your efforts to combat human trafficking and protect people.

Copied on this email are Jamie Bruce, who heads up our production, and Josh Murphy, who heads up our non-scripted series development. It would be great to set a call with you to discuss your use of Clearview in the field, success stories and your interest in participating with us in the programming we are making to highlight these great stories for television.

Please let us know a convenient time for you and we'll look forward to speaking soon.

All the best,

Spencer

Happy Friday Rachael – Hope you're well.

Following up on our call last week. Per our conversation, attached is short document outlining the proposed creative and desired law enforcement access for XG's upcoming investigative series in partnership with Clearview AI, to aid in your discussions with Chief Gina Hawkins. Let's set up a Zoom video conference call to discuss after you and your team have had a chance to read and digest.

Have a great weekend!

Thanks,

Good afternoon,

My apologies in the delay of my response. We've had several pressing issues arise lately. I'd be happy to talk with you all at your convenience.

Our department has been a part of various programs in the past and I was able to speak with my Chief recently about her interest in working with AMW. She is very interested in hearing more about your ideas.

---

Good Morning Racheal – Hope you and your team are staying safe and healthy.

With all that's been going on we know a new television series cannot be your team's priority right now, however, just wanted to touch base to say that as a production company founded by former FBI, police, and DOJ prosecutors, XG believes it's now more important than ever for producers to be putting pro law enforcement projects out into the world that depict law enforcement as the strong, moral, diverse, capable people they are. We continue to believe that this project can accomplish those objectives.

When you and your team are ready to re-engage to discuss this idea, so are we!

Be well,

Josh,

Good morning! Can I check your availability for the zoom call? I will then compare that against the Chief's calendar. I've gone over the details with my Major and he wants to set it up with her. Does that sound ok for you guys? That way she can go ahead and get her questions answered up front.

Jessica, our main questions with SaaS operations are as follows:

How is Clearview encrypting data in transit and at rest?
What method is Clearview using to back up data?
Who owns the data that is uploaded to Clearview?
How can we access our data that resides with Clearview in case of a breach?
Does Clearview have annual audits on their systems?
What is Clearview's patching and/or vulnerability management practices?
Is there a copy available of Clearview's security assessments? If so can you send me the report(s)?

Hi Hoan,

Thank you for the introduction. Rachael, it's a pleasure to meet you. We hope you're doing well and staying safe in this challenging time to be in law enforcement. As a company borne from and comprised of law enforcement, we appreciate your efforts to combat human trafficking and protect people.

Copied on this email are Jamie Bruce, who heads up our production, and Josh Murphy, who heads up our non-scripted series development. It would be great to set a call with you to discuss your use of Clearview in the field, success stories and your interest in participating with us in the programming we are making to highlight these great stories for television.

Please let us know a convenient time for you and we'll look forward to speaking soon.

All the best,

Spencer

Spencer and Jamie,

Rachael here is a fantastic investigator doing work solving human trafficking and is a heavy Clearview user.

Their department could be very interested in doing work with you guys on the show.

Please connect,

Thanks,
Hoan

Subject: Clearview Action Needed

Good afternoon all,
Per Chief Hawkins, (from Major Braden) Mr. Hewett has given Chief Hawkins verbal approval to move forward with Clearview. We are currently using a trial from Clearview- this is how we were able to identify suspects in the recently looting.
However, we need a contract in order to move forward with payment for the services. Even though this is a web-based portal with little internal technology needed, it is the City's policy that IT review the contract for services and specifications. Purchasing will need this contract as well. The documents that are attached are not sufficient for IT or contract purposes, if you have additional documents please respond to this email with those documents. Action needed: A fully draft contact and list of specification, we need a software service contract asap. The payment will continue to be withheld until a contract is produced and from the Fayetteville Police Department to the IT Department and Purchasing Department.

Respectfully,

Resending with Corrected Typos:

Hi Rachael, I hope all is well with you. As you likely know, we have a case in Illinois relating to their biometrics law (which has a law enforcement exception). We are requesting support from our users by collecting affidavits from law enforcement as to the effectiveness and benefits to law enforcement to resolve crimes quickly with the use of the investigative tool Clearview AI provides. Just let me know if your agency would be agreeable to this. We have to have these submitted by April 30, 2021.

Hi Rachael,

This sounds great. Do you have anyone on your IT team that can join? What kind of images are you thinking of?

Best,
Hoan

Hi R. Hedrick,

Do you know any other investigators who should try out Clearview AI? Just click or tap "Invite User" on the left-hand side of the screen when you're logged in to Clearview AI on desktop or mobile to invite them.

We'll get them set up with a free Clearview AI demo account immediately. Feel free to refer **as many officers and investigators** as you want. **The outcome of a major crime, cold case, or fugitive search may depend on it!**

You can also send them the link to our website at www.clearview.ai and tell them to click the "Request Access" button, or send us their names and e-mail addresses by replying to this email or by sending an email to help@clearview.ai and we'll set them up right away!

Contact us anytime with your questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Thanks for your work!

Solve Cases Faster: Utilizing AI Technology in Child Exploitation and Human Trafficking Cases

When investigating human trafficking and sex crimes, time is everything. Clearview AI is a revolutionary investigative tool helping law enforcement agencies solve these cases faster. Clearview AI can generate investigative leads by searching uploaded images against public web sources, including news media, mugshot websites, human trafficking sites, and public social media. Agencies can now import their own mugshot databases of any size into Clearview AI.

Roger Rodriguez, who served 20+ years with the NYPD, spearheaded the NYPD's first dedicated

facial recognition unit, and helped start their Real Time Crime Center, will present alongside a panel of law enforcement agencies who have successfully used our technology to rescue victims of human trafficking and sex crimes.

Register now to learn how Clearview AI's technology can be a game changer for your human trafficking investigations.

Please register ahead of time as we will be vetting all sign-ups to ensure they are from LEA's. Space will be limited.

Statement to our Customers

We are writing to let you know that someone has gained unauthorized access to our organization list. They retrieved the following:

* Organization Names
* Number of user accounts
* Number of searches

No passwords or any personally identifiable information of customers were revealed. While some information about test user accounts may have been accessed, no law enforcement search histories, emails, user names, public photos or any biometric data were accessed.

Our servers were not breached, and there was no compromise of Clearview's systems or network.

Most importantly, we have fixed this vulnerability.

We are contacting the authorities about this unauthorized access.

If you have any questions, please feel free to contact us at: help@clearview.ai

Thank you,
Team Clearview

Jessica Medeiros Garrison

Hi Jennifer,

Thank you for taking the time to speak with me regarding success stories you've had with our technology, I look forward to hearing them. Just send them back to me here and whether or not you'd like to be willing to speak publicly or go on record, or remain anonymous.

Have a great day, and again, I appreciate your help!

Sarah Kathryn

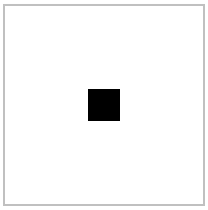
Hi Ramon Herrera II,

Have you tried taking a selfie with Clearview yet? See what comes up! It's the best way to quickly see the power of Clearview in real time. Try your friends or family. Or a celebrity like Joe Montana or George Clooney.

Your Clearview account has **unlimited** searches. So feel free to run wild with your searches. Test Clearview to the limit and see what it can do. The photos you search with Clearview are **always** private and **never** stored in our proprietary database, which is totally separate from the photos you search.

You can get Clearview on your iPhone or Android cell phone by clicking "Get Mobile App" on the left-hand side of the screen when you're logged in to Clearview on desktop.

To log in to Clearview on desktop just click the button below:



You can also upload a photo of yourself to Clearview on your desktop computer.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Best regards,

—Team Clearview
** CAUTION: External email. Do not click links or open attachments unless sender is verified. Send all suspicious email as an attachment to ITSecurity@ci.fay.nc.us **

Subject: [EXTERNAL]Tech Questions
Date: Wednesday, June 24, 2020 12:05:27 PM

Apologies for the delay. This should help.

> What is Clearview's patching and/or vulnerability management practices?

Clearview AI conducts automated code scans every time there is a change and looks for vulnerabilities in our dependencies as well as our own code. Vulnerabilities are patched as soon as they are discovered. We also run a bug bounty program with HackerOne and conduct professional code audits.

> Is there a copy available of Clearview's security assessments? If so can you send me the report(s)?

We are unable to provide the full report but can provide a letter of engagement from NCC group covering the terms of our latest engagement.

How is Clearview encrypting data in transit and at rest?
All clearview traffic in and out of our secured data center is end to end encrypted with the latest TLS specifications, and protected by Cloudflare reverse proxy technology. All live data is stored on servers in our physically secured data center, with strict internal access controls.

What method is Clearview using to back up data?
Clearview's critical service data is backed up to an s3 compatible cloud storage service, where no employee is able to access it without explicit authorization.

How can we access our data that resides with Clearview in case of a breach?
You can email us at help@clearview.ai and request an export of your organization's data.

Who owns the data that is uploaded to Clearview?
User organizations own the images they upload to initiate searches and agree to share them with us pursuant to our terms of service, to provide your user search history. We do not share the images you upload with anyone else or include them in our database that comprises the search results users see. You can customize the retention of your search history and purge it when you want.

Does Clearview have annual audits on their systems?
Over the last year we have enlisted multiple external organizations to provide security assessments. We plan to engage with these organizations on a yearly schedule.

Solve Cases Faster: Utilizing AI Technology in Sex Crimes and Human Trafficking Cases

When investigating human trafficking and sex crimes, time is everything. Clearview AI is a revolutionary investigative tool helping law enforcement agencies solve these cases faster. Clearview AI can generate investigative leads by searching uploaded images against public web sources, including news media, mugshot websites, human trafficking sites, and public social media. Agencies can now import their own mugshot databases of any size into Clearview AI.

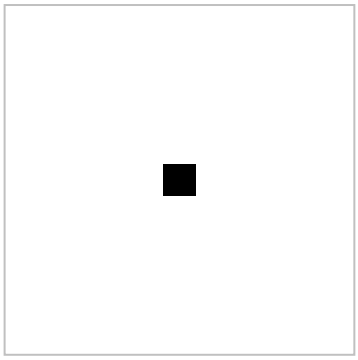
Register now to learn how Clearview AI's technology can be a game changer for your human trafficking investigations.

Please register ahead of time and with your LEA email address, as we will be vetting all sign-ups. Space will be limited. You will receive a unique link to join the webinar, once your registration is approved.

Who's Presenting?

A panel of law enforcement agencies who have successfully used AI technology to rescue victims of human trafficking and sex crimes includes:

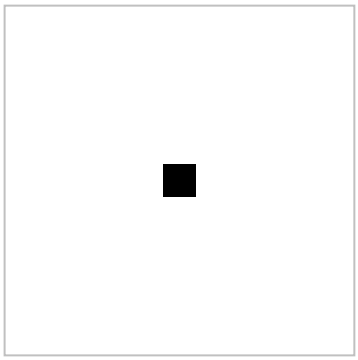
- Alabama Law Enforcement Agency (ALEA)
- South Carolina Department of Public Safety (SCDPS)
- Miami Police Department



Roger Rodriguez

Vice President, Sales at Clearview AI

As a former NYPD Detective Investigator involved with the development of the NYPD Real Time Crime Center and its Facial Identification Section, Roger Rodriguez is an advocate for the ethical and responsible use of police technology solutions. As a trusted C-level advisor, sales and business development team leader with reach into the North American, South American, EMEA and APAC markets, Roger serves as the VP, Sales for Clearview AI, ensuring policy adoption, privacy compliance, best practice workflows and better technology solutions for public safety.



Jessica Medeiros Garrison

Director, Business Development at Clearview AI

Jessica Medeiros Garrison is Director of Business Development and Sales Overlay (North America) for Clearview AI, Inc. She graduated from the University of Alabama with a Bachelor of Science in 1997 and from the University of Alabama School of Law with a Juris Doctor in December, 2000. As an attorney, she earned a partnership in her firm with a focus on commercial law. She has served as a Deputy Attorney General, Chief Counsel and Director of Public Relations and Legislative Affairs for various state Attorneys General. She has also served as the Executive Director of the Republican Attorneys General Association and as President of the Rule of Law Defense Fund. Jessica currently maintains her membership in the Birmingham Bar Association, Alabama Bar Association, the Society of International Business Fellows, and The Federalist Society.

The Proof Is Out There
S1 E9
Flying Orbs and Freakish Fish
20m | 2021 | TV-PG | CC

Could centuries-old photos be proof that reincarnation is actually occurring? Is nuclear waste off the coast of Russia creating an army of mutant fish? And, are California wildfires actually the result of secret government space weapons? In this episode, Tony Harris and his team of experts examine new videos and photographs and reach a verdict on what's behind these strange

happenings.

Click here to watch the episode online or catch it on The History Channel tonight, Friday 2/5/21 at 11:33 PM EST.

Scroll ahead to approximately 16:00 to catch Clearview AI's section.

The Proof Is Out There
S1 E9
Flying Orbs and Freakish Fish
20m | 2021 | TV-PG | CC

Could centuries-old photos be proof that reincarnation is actually occurring? Is nuclear waste off the coast of Russia creating an army of mutant fish? And, are California wildfires actually the result of secret government space weapons? In this episode, Tony Harris and his team of experts examine new videos and photographs and reach a verdict on what's behind these strange

happenings.

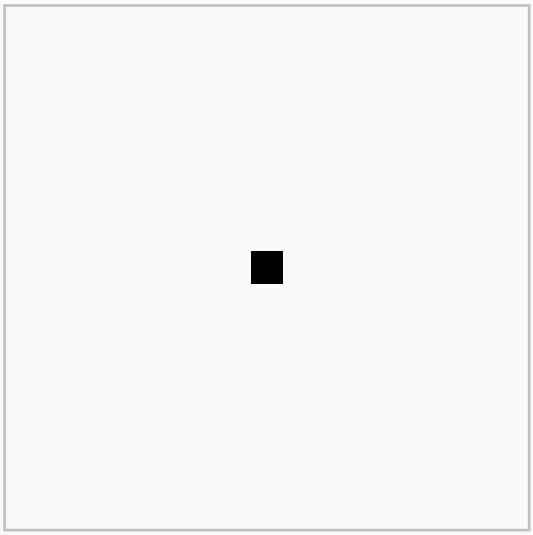
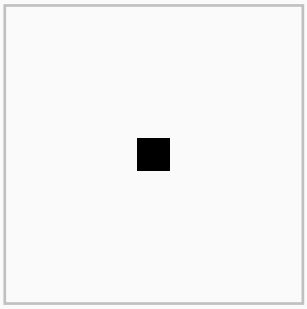
Date: Wednesday, September 16, 2020 11:41:01 AM





Solve Cases Faster: Utilizing AI Technology in Child Exploitation and Human Trafficking Cases

When investigating human trafficking and sex crimes, time is everything. Clearview AI is a revolutionary investigative tool helping law enforcement agencies solve these cases faster. Clearview AI can generate investigative leads by searching uploaded images against public web sources, including news media, mugshot websites, human trafficking sites, and public social media. Agencies can now import their own mugshot databases of any size into Clearview AI.

Roger Rodriguez, who served 20+ years with the NYPD, spearheaded the NYPD's first dedicated

facial recognition unit, and helped start their Real Time Crime Center, will present alongside a panel of law enforcement agencies who have successfully used our technology to rescue victims of human trafficking and sex crimes.

Register now to learn how Clearview AI's technology can be a game changer for your human trafficking investigations.

Please register ahead of time as we will be vetting all sign-ups to ensure they are from LEA's. Space will be limited.

Solve Cases Faster: Utilizing AI Technology in Child Exploitation and Human Trafficking Cases

When investigating human trafficking and sex crimes, time is everything. Clearview AI is a revolutionary investigative tool helping law enforcement agencies solve these cases faster. Clearview AI can generate investigative leads by searching uploaded images against public web sources, including news media, mugshot websites, human trafficking sites, and public social media. Agencies can now import their own mugshot databases of any size into Clearview AI.

Roger Rodriguez, who served 20+ years with the NYPD, spearheaded the NYPD's first dedicated

facial recognition unit, and helped start their Real Time Crime Center, will present alongside a panel of law enforcement agencies who have successfully used our technology to rescue victims of human trafficking and sex crimes.

Register now to learn how Clearview AI's technology can be a game changer for your human trafficking investigations.

Please register ahead of time as we will be vetting all sign-ups to ensure they are from LEA's. Space will be limited.

Solve Cases Faster: Utilizing AI Technology in Child Exploitation and Human Trafficking Cases

When investigating human trafficking and sex crimes, time is everything. Clearview AI is a revolutionary investigative tool helping law enforcement agencies solve these cases faster. Clearview AI can generate investigative leads by searching uploaded images against public web sources, including news media, mugshot websites, human trafficking sites, and public social media. Agencies can now import their own mugshot databases of any size into Clearview AI.

Roger Rodriguez, who served 20+ years with the NYPD, spearheaded the NYPD's first dedicated

facial recognition unit, and helped start their Real Time Crime Center, will present alongside a panel of law enforcement agencies who have successfully used our technology to rescue victims of human trafficking and sex crimes.

Register now to learn how Clearview AI's technology can be a game changer for your human trafficking investigations.

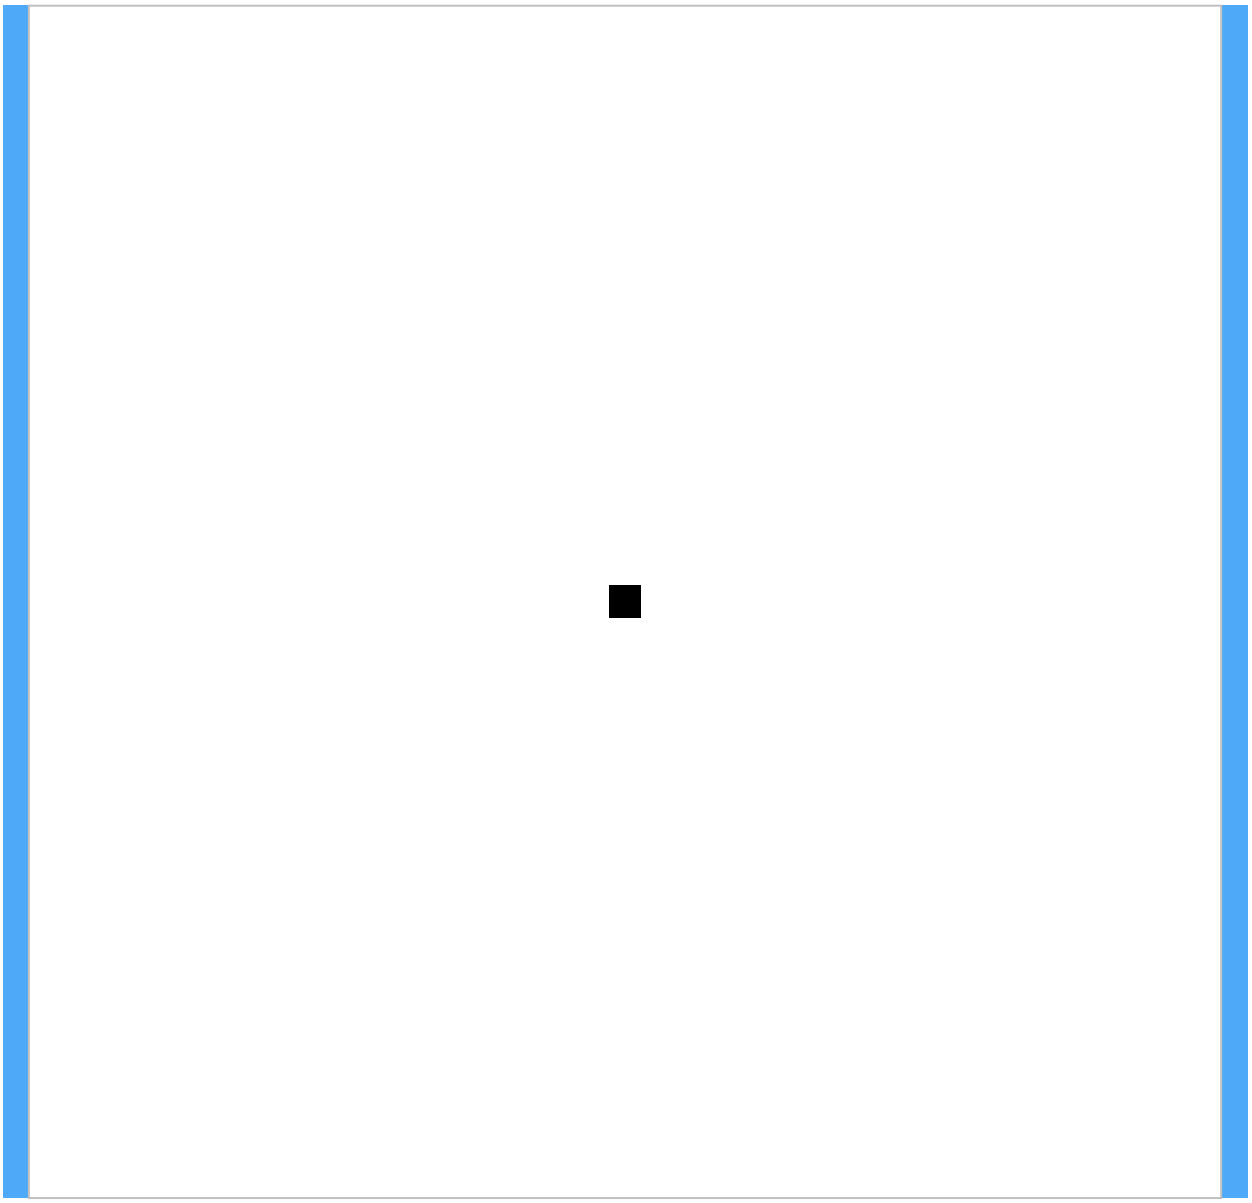
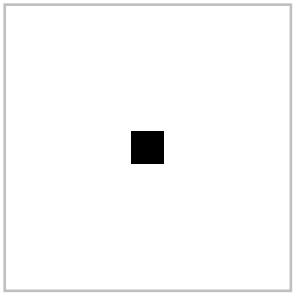
Date: Friday, April 9, 2021 11:29:50 AM



Welcome to Clearview AI's first customer newsletter - created just for our trusted law enforcement partners. We hope you enjoy this first edition and help us continue to recognize and celebrate the incredible work LEAs are doing across the country to help secure our communities.

Please add our email address info@clearview.ai to your contact or safe senders list today.

> "I hope your 2021 has been off to a great start! We here at Clearview AI have had a busy year so far and **we're excited to continue working hard and doing our part in supporting you.**



Hoan Ton-That
CEO & Co-Founder
hoan@clearview.ai

What gets me up every day is hearing about the cases that our product gets to help solve like child abuse, the Capitol insurrections, cold cases, homicides, and the list goes on. **I feel honored that we get to play a small part in making your jobs more efficient.** We've really enjoyed working with you, learning about new functionalities you're looking for, expanding our product, and hearing your success stories.

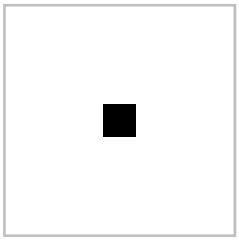
Please feel free to reach out to me with any questions you have and I'd be happy to help."

Clearview AI on the Front Cover of NYT Magazine

Read here about the history behind our NYC-based start-up and how **Clearview AI is paving the way for the broader acceptance and understanding of facial recognition.**

The Capitol riot is one example of an eye-opening event that is helping to change critics' perception of facial recognition and show the real value of a tool like Clearview AI. According to Hoan Ton-That, Co-Founder & CEO - "You see a lot of detractors change their mind for a somewhat different use case," he said. **"We are seeing wider acceptance of our platform."**

Clearview AI's tool is helping to identify and prosecute those that took part in such a heinous act.



Read the NYT

First use of Clearview AI Technology was a Success for Homeland Security Investigation

Using Clearview AI's technology, HSI was able to uncover the identity of a child exploitation suspect who later pleaded guilty to sexually assaulting a child and producing images of the abuse. The child was rescued and the perpetrator was sentenced to 35 years in prison.

"[Without Clearview AI] there was no way we would have found that guy. It has revolutionized how we are able to identify and rescue children. **It's only going to get better."**
- Erin Burke, Chief of HSI Child Exploitation Investigation Unit

Our Website has a Fresh New Look!

Have you visited www.clearview.ai recently? We've updated our website to highlight our technology's use cases and have added more opportunities to showcase the great work our customers are doing to solve crimes and keep our communities safer!

Q1 Industry Events Recap
So far in 2021 Clearview AI has attended several industry events, including:

- Winter Mississippi Chiefs of Police - Jan. 2021 - Ridgeland, MS
- National Fusion Center Association's Annual Training Event - Jan. 2021 - Virtual

- Wisconsin Police Leadership Foundation Training - Feb. 2021 - Wisconsin Dells, WI

If we missed you, we look forward to seeing you at the other events we plan to attend this year.

We're Here for You

It is Clearview AI's position to remain committed in revolutionizing facial recognition. Through collaboration with our customers, we can work together to expand the use cases of the technology and ensure its responsible use for public safety needs, as well as quickly implement new features and improvements based on suggestions from our clients.

Have a new feature suggestion, question, comment, concern? Locked out of your account? Need something else? Email us at help@clearview.ai and we'd be happy to help.

We'd love to hear your feedback on what topics you'd like to see more of and how we can better our email communication with you. Let us know today!

- Winter Mississippi Chiefs of Police - Jan. 2021 - Ridgeland, MS
- National Fusion Center Association's Annual Training Event - Jan. 2021 - Virtual

- Wisconsin Police Leadership Foundation Training - Feb. 2021 - Wisconsin Dells, WI

If we missed you, we look forward to seeing you at the other events we plan to attend this year.

We're Here for You

It is Clearview AI's position to remain committed in revolutionizing facial recognition. Through collaboration with our customers, we can work together to expand the use cases of the technology and ensure its responsible use for public safety needs, as well as quickly implement new features and improvements based on suggestions from our clients.

Have a new feature suggestion, question, comment, concern? Locked out of your account? Need something else? Email us at help@clearview.ai and we'd be happy to help.

We'd love to hear your feedback on what topics you'd like to see more of and how we can better our email communication with you. Let us know today!

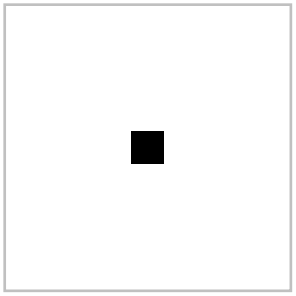
Welcome to Clearview AI's first customer newsletter - created just for our trusted law enforcement partners. We hope you enjoy this first edition and help us continue to recognize and celebrate the incredible work LEAs are doing across the country to help secure our communities.

Please add our email address info@clearview.ai to your contact or safe senders list today.

> "I hope your 2021 has been off to a great start! We here at Clearview AI have had a busy year so far and **we're excited to continue working hard and doing our part in supporting you.**



Hoan Ton-That
CEO & Co-Founder
hoan@clearview.ai

What gets me up every day is hearing about the cases that our product gets to help solve like child abuse, the Capitol insurrections, cold cases, homicides, and the list goes on. **I feel honored that we get to play a small part in making your jobs more efficient.** We've really enjoyed working with you, learning about new functionalities you're looking for, expanding our product, and hearing your success stories.

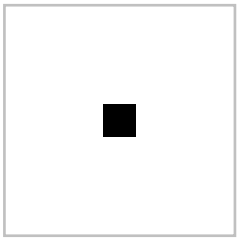
Please feel free to reach out to me with any questions you have and I'd be happy to help."

Clearview AI on the Front Cover of NYT Magazine

Read here about the history behind our NYC-based start-up and how **Clearview AI is paving the way for the broader acceptance and understanding of facial recognition.**

The Capitol riot is one example of an eye-opening event that is helping to change critics' perception of facial recognition and show the real value of a tool like Clearview AI. According to Hoan Ton-That, Co-Founder & CEO - "You see a lot of detractors change their mind for a somewhat different use case," he said. **"We are seeing wider acceptance of our platform."**

Clearview AI's tool is helping to identify and prosecute those that took part in such a heinous act.



Read the NYT

First use of Clearview AI Technology was a Success for Homeland Security Investigation

Using Clearview AI's technology, HSI was able to uncover the identity of a child exploitation suspect who later pleaded guilty to sexually assaulting a child and producing images of the abuse. The child was rescued and the perpetrator was sentenced to 35 years in prison.

"[Without Clearview AI] there was no way we would have found that guy. It has revolutionized how we are able to identify and rescue children. **It's only going to get better."**
- Erin Burke, Chief of HSI Child Exploitation Investigation Unit

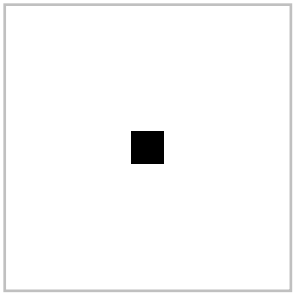
Welcome to Clearview AI's first customer newsletter - created just for our trusted law enforcement partners. We hope you enjoy this first edition and help us continue to recognize and celebrate the incredible work LEAs are doing across the country to help secure our communities.

Please add our email address info@clearview.ai to your contact or safe senders list today.

> "I hope your 2021 has been off to a great start! We here at Clearview AI have had a busy year so far and **we're excited to continue working hard and doing our part in supporting you.**



Hoan Ton-That
CEO & Co-Founder
hoan@clearview.ai

What gets me up every day is hearing about the cases that our product gets to help solve like child abuse, the Capitol insurrections, cold cases, homicides, and the list goes on. **I feel honored that we get to play a small part in making your jobs more efficient.** We've really enjoyed working with you, learning about new functionalities you're looking for, expanding our product, and hearing your success stories.

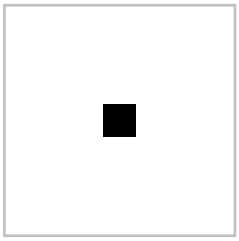
Please feel free to reach out to me with any questions you have and I'd be happy to help."

Clearview AI on the Front Cover of NYT Magazine

Read here about the history behind our NYC-based start-up and how **Clearview AI is paving the way for the broader acceptance and understanding of facial recognition.**

The Capitol riot is one example of an eye-opening event that is helping to change critics' perception of facial recognition and show the real value of a tool like Clearview AI. According to Hoan Ton-That, Co-Founder & CEO - "You see a lot of detractors change their mind for a somewhat different use case," he said. **"We are seeing wider acceptance of our platform."**

Clearview AI's tool is helping to identify and prosecute those that took part in such a heinous act.



Read the NYT

First use of Clearview AI Technology was a Success for Homeland Security Investigation

Using Clearview AI's technology, HSI was able to uncover the identity of a child exploitation suspect who later pleaded guilty to sexually assaulting a child and producing images of the abuse. The child was rescued and the perpetrator was sentenced to 35 years in prison.

"[Without Clearview AI] there was no way we would have found that guy. It has revolutionized how we are able to identify and rescue children. **It's only going to get better."**
- Erin Burke, Chief of HSI Child Exploitation Investigation Unit

Our Website has a Fresh New Look!

Have you visited www.clearview.ai recently? We've updated our website to highlight our technology's use cases and have added more opportunities to showcase the great work our customers are doing to solve crimes and keep our communities safer!

Hi,

Kimberly Thomas invited you to Clearview!
To try it out for free please click the button below:

Try it out for free

What's Clearview?

Clearview is like **Google Search for faces.** Just upload a photo to the app and instantly get results from mug shots, social media, and other publicly available sources.

Our technology combines the **most accurate** facial identification software worldwide with the **single largest** proprietary database of facial images to help you find the suspects you're looking for.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Best regards,

—Team Clearview

What's Clearview?

Clearview is like **Google Search for faces.** Just upload a photo to the app and instantly get results from mug shots, social media, and other publicly available sources.

Our technology combines the **most accurate** facial identification software worldwide with the **single largest** proprietary database of facial images to help you find the suspects you're looking for.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Best regards,

—Team Clearview

Good afternoon, Ms. Garrison,

Attached is a Professional Services Agreement for the City of Fayetteville's paid access to the Clearview AI service. Please review, sign and return as soon as possible.

Please include a copy of your Certificate of Insurance with the City of Fayetteville marked and listed as additionally insured.

Please contact me if there are any questions or comments.

Thank you.

Respectfully,

Donna B. Haire, Buyer

Hi Jessica!

Can I get a quote from you for our next fiscal year budget? Our budget cycle is from July 1-June 30 each year and we are planning our budget for FY22 right now.

Also, when is our next payment due? Can you send me an invoice?

Thank you ma'am!!

Thank you for your payment of $11,000. You are licensed for eleven users. Please have the administrator update the users in their Clearview Back Office to reflect the accurate number of active licenses. Should you decide to expand your program and add more users, please let me know.

The renewal date is March 31, 2021. Just a reminder, you are the administrator and you are able to monitor the usage, turn off accounts and add additional licensed users. If you need to make any adjustments such as scheduling webinars, adding additional administrators, additional licenses, or if you would like to set up galleries of your own images that can be searched with the Clearview Ai please let me know.

Many thanks,

Jess

Jessica, our main questions with SaaS operations are as follows:

How is Clearview encrypting data in transit and at rest?
What method is Clearview using to back up data?
Who owns the data that is uploaded to Clearview?
How can we access our data that resides with Clearview in case of a breach?
Does Clearview have annual audits on their systems?
What is Clearview's patching and/or vulnerability management practices?
Is there a copy available of Clearview's security assessments? If so can you send me the report(s)?

Subject: Clearview Action Needed

Good afternoon all,

Per Chief Hawkins, (from Major Braden) Mr. Hewett has given Chief Hawkins verbal approval to move forward with Clearview. We are currently using a trial from Clearview- this is how we were able to identify suspects in the recently looting.

However, we need a contract in order to move forward with payment for the services. Even though this is a web-based portal with little internal technology needed, it is the City's policy that IT review the contract for services and specifications. Purchasing will need this contract as well. The documents that are attached are not sufficient for IT or contract purposes, if you have additional documents please respond to this email with those documents. Action needed: A fully draft contact and list of specification, we need a software service contract asap. The payment will continue to be

withheld until a contract is produced and from the Fayetteville Police Department to the IT Department and Purchasing Department.

Respectfully,

Tammy Pippen, Accreditation & Grant Manager

Hi Jessica!

I've put Rachael Songalewski and Captain Robert Spatorico, they are going to be the POCs for this system. Thanks!

Leah

---

you got it!
Michael -You should have an email from Team Clearview shortly with your account activation link. I encourage you to test the tech on computer/laptop (log in thru https://app.clearview.ai/app/login) and the mobile app. Also attached is general info and sample success stories and a doc with some search tips. If you would find a video demo call helpful just let me know. **Finally – if there are any other officers/agents that would like an account just send me names and emails. The trial period runs 30 days so let's be sure to get as many officers testing the tech that you would like during the trial.**

Please do not hesitate to contact me with any questions. I look forward to working with you.

Stay Safe,
- Jess

Hi Jessica!

I was wanted to get some quotes for Clearview. Our agency has about 400 employees and would like to know the prices for an enterprise or flat account for all users and prices for a limited number of accounts/users so we can know our options.

Let me know if you have any questions for me!

Thanks!

Hi, I tried to leave you a voicemail but i got a recording saying the number was incorrect. I reached the desk clerk who is going to get you a message. I was contacting you to see if the check for payment of our invoice was ever sent. We do not show receipt. Could you also provide me with a direct phone number?
Also, would you be willing to serve as administrator for the department? The administrator will be able to monitor the usage and add test users. As for deploying a pilot, there is no cost,

no limit to test users and no limit on number of searches. We encourage you to test the technology with multiple users from different areas (financial crimes, violent crimes, patrol, human trafficking, etc.) Additionally, if there are any other officers that would like a demo account just send me names and email addresses and I will set them up or your admin(s) can set them up.

Look forward to hearing from you,

Jess

Good afternoon,

My apologies in the delay of my response. We've had several pressing issues arise lately. I'd be happy to talk with you all at your convenience.

Our department has been a part of various programs in the past and I was able to speak with my Chief recently about her interest in working with AMW. She is very interested in hearing more about your ideas.

Hi Hoan,

Thank you for the introduction. Rachael, it's a pleasure to meet you. We hope you're doing well and staying safe in this challenging time to be in law enforcement. As a company borne from and comprised of law enforcement, we appreciate your efforts to combat human trafficking and protect people.

Copied on this email are Jamie Bruce, who heads up our production, and Josh Murphy, who heads up our non-scripted series development. It would be great to set a call with you to discuss your use

of Clearview in the field, success stories and your interest in participating with us in the programming we are making to highlight these great stories for television.

Please let us know a convenient time for you and we'll look forward to speaking soon.

All the best,

Spencer

Subject: [EXTERNAL]Tech Questions

Apologies for the delay. This should help.

> What is Clearview's patching and/or vulnerability management practices?

Clearview AI conducts automated code scans every time there is a change and looks for vulnerabilities in our dependencies as well as our own code. Vulnerabilities are patched as soon as they are discovered. We also run a bug bounty program with HackerOne and conduct professional code audits.

> Is there a copy available of Clearview's security assessments? If so can you send me the report(s)?

We are unable to provide the full report but can provide a letter of engagement from NCC group covering the terms of our latest engagement.

How is Clearview encrypting data in transit and at rest?

All clearview traffic in and out of our secured data center is end to end encrypted with the latest TLS specifications, and protected by Cloudflare reverse proxy technology. All live data is stored on servers in our physically secured data center, with strict internal access controls.

What method is Clearview using to back up data?

Clearview's critical service data is backed up to an s3 compatible cloud storage service, where no employee is able to access it without explicit authorization.

How can we access our data that resides with Clearview in case of a breach?

You can email us at help@clearview.ai and request an export of your organization's data.

Who owns the data that is uploaded to Clearview?

User organizations own the images they upload to initiate searches and agree to share them with us pursuant to our terms of service, to provide your user search history. We do not share the images you upload with anyone else or include them in our database that comprises the search results users see. You can customize the retention of your search history and purge it when you want.

Does Clearview have annual audits on their systems?

Over the last year we have enlisted multiple external organizations to provide security assessments. We plan to engage with these organizations on a yearly schedule.

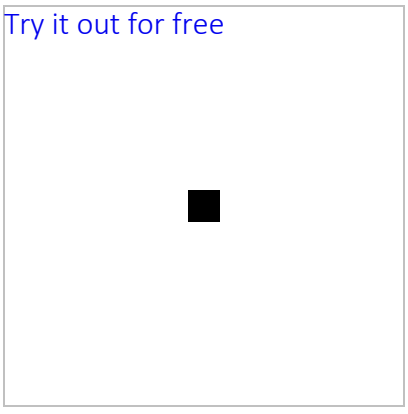
Subject: [EXTERNAL]You have been invited to Clearview

Hi,

Kimberly Richards invited you to Clearview!
To try it out for free please click the button below:

Try it out for free



What's Clearview?

Clearview is like **Google Search for faces.** Just upload a photo to the app and instantly get results from mug shots, social media, and other publicly available sources.

Our technology combines the **most accurate** facial identification software worldwide with the **single largest** proprietary database of facial images to help you find the suspects you're looking for.

Feel free to reach out to if you have any questions, comments, or feedback. Just reply to this e-mail or contact help@clearview.ai

Best regards,

—Team Clearview

Subject: City of Fayetteville Agreement (Clearview AI)

Good afternoon, Ms. Garrison,

Attached is a Professional Services Agreement for the City of Fayetteville's paid access to the Clearview AI service. Please review, sign and return as soon as possible.

Please include a copy of your Certificate of Insurance with the City of Fayetteville marked and listed as additionally insured.

Please contact me if there are any questions or comments.

Thank you.

Respectfully,

Donna B. Haire, Buyer

Subject: Regards to Technical Specs
Date: Monday, June 15, 2020 1:21:38 PM

Hi Jessica,

Per our conversation from earlier, I am needing the technical specs of how one accesses the Clearview software.

Thanks!

Subject: Request for Quote/Invoice for Upcoming Fiscal Year - Fayetteville, NC PD
Date: Tuesday, March 9, 2021 11:14:42 AM
Attachments: image001.png

Hey Jessica,

Can you tell me when our next payment would be due? And then may I get an official quote or invoice? I want ensure I am budgeting appropriately for Clearview.

Thank you ma'am,
